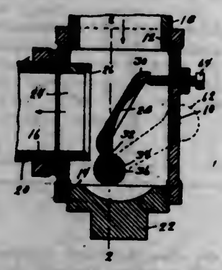
1,578,868. FOOT FUEL CONTROL FOR MOTOR VEHICLES. WALTER H. THOMAS, Spencer, Iowa. Filed Jan. 25, 1926. Serial No. 83,601. 4 Claims. (Cl. 74—39.)

1. In a fuel control structure for motor vehicles, a throttle actuating rod, a stop thereon, a foot actuatable operating device, a rod pivoted thereto and to said first rod, a member slidably mounted on the first rod, and a spring connecting said foot actuatable device and said member and tending to hold the member and the stop together.

1,578,869. ANTIVIBRATING HORN. WILLIAM H. THOMMEN, Plymouth, Wis., assignor to Plymouth Radio and Phonograph Co., Plymouth, Wis. Filed Oct. 4, 1924. Serial No. 741,588. 3 Claims. (Cl. 181—27.)

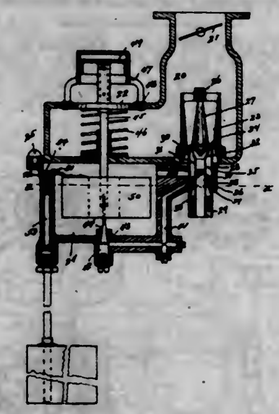
1. The method of making the neck portions of horns comprising cutting an elongated rectangular block longitudinally along diverging planes to provide a central wedge and two outer wedges, sawing the central wedge along two diverging, longitudinally extending lines to provide front and rear portions, removing the material enclosed between said lines, and securing the front and rear members between the side members.

1,578,870. SPOOL OR BOBBIN. EDWARD J. THOMSON, Quincy, Mass., assignor to Summit Thread Company, East Hampton, Conn., a Corporation of Maine. Filed Oct. 27, 1924. Serial No. 746,043. 3 Claims. (Cl. 112—251.)



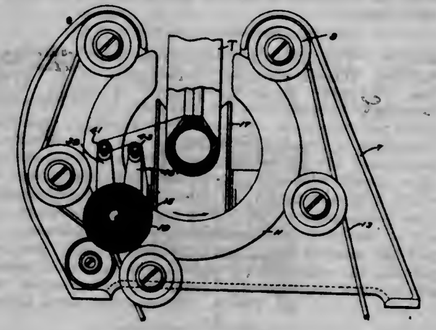
1. A shuttle bobbin comprising a spool including a tubular core, annular heads having central orifices receiving the ends of the core, and tongues integral with the heads and projecting inwardly therefrom, said tongues bearing on the external surface of the core between the heads; and a thread mass wound on the core between the heads and clamping the tongues against the external surface of the core.

1,578,871. RAIL JOINT. CHARLES M. TRUNDLE and EDGAR T. MILLS, Millville, W. Va. Filed Dec. 19, 1924. Serial No. 756,965. 2 Claims. (Cl. 238—251.)



1. A rail joint fastening consisting of a stud having a medial cylindrical enlargement and similar heads at opposite ends, the inner faces of the heads being parallel and reversely inclined.

1,578,872. AUTOMATIC SHUT-OFF VALVE. ALBERT J. WALSH, West Springfield, Mass. Filed Apr. 14, 1925. Serial No. 23,074. 8 Claims. (Cl. 251—126.)

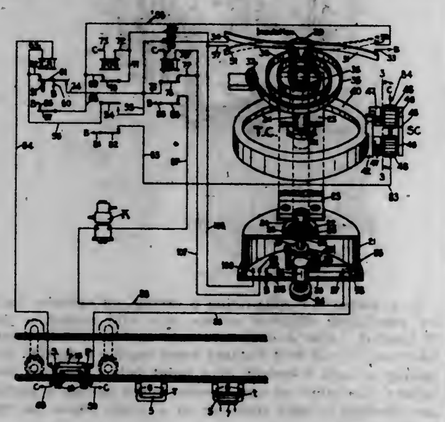


5. An automatic shut-off valve comprising a casing having inlet and outlet openings, a third opening opposite one of said openings, a removable closure for said third opening, a valve clapper disposed within and having a pivotal support in said casing and extended upwardly from said pivotal support into a position in which it is adapted to close said outlet opening by abnormal fluid pressure and biased by its weight for movement away from said outlet opening when in normal open position, and means to support said clapper normally in open position, and adapted to vary the open position thereof, comprising a member having an adjustable screw-threaded connection with and extended into said casing immediately beneath the inlet opening and in position to engage the upper portion of said clapper.

1,578,873. CARBURETOR. HORACE H. WELCH, Detroit, Mich., assignor to Edna V. Gustafson, Chicago, Ill. Filed Dec. 8, 1916. Serial No. 135,723. 12 Claims. (Cl. 261—72.)

1. A carburetor comprising a casing, an anterior valve for restricting the flow of air into said casing, a pair of Venturi tubes leading into said casing, a fuel supply reservoir, one of said Venturi tubes having a suction port leading to said reservoir at a point below the fuel level thereof, the other of said Venturi tubes having a suction port leading to said reservoir at a point above the fuel level thereof.

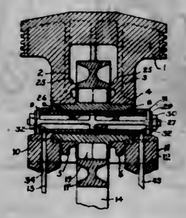
1,578,874. DISPENSING MATERIAL FROM ROLLS. WILLIAM M. WHEILDON, Framingham, Mass., assignor to Edward H. Angier, Framingham, Mass. Filed Feb. 21, 1925. Serial No. 10,854. 18 Claims. (Cl. 242—75.)



1. A tension mechanism for material in rolls comprising a split cylinder adapted to serve as a spindle for the roll and tending when constricted to expand again to grip the roll and means for constricting the same comprising an arm acting on a portion of the perimeter and having a bearing for the material leading from the roll.

1,578,875. RUBBER COMPOSITION AND METHOD OF MAKING THE SAME. WILLIAM B. WIEGAND, Montreal, Quebec, Canada. Filed June 16, 1922. Serial No. 568,886. 8 Claims. (Cl. 106—23.)

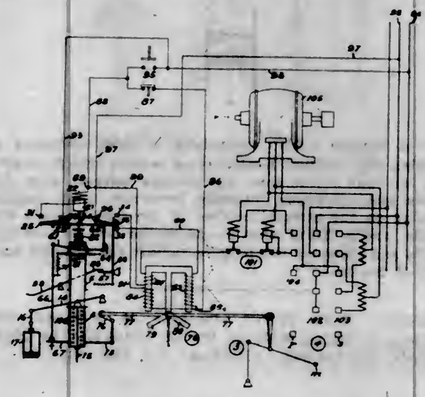
1. The process of treating rubber with from sixty (60) to one hundred (100) parts by weight of carbon or lamp black to each one hundred (100) parts by weight of crude rubber together with the necessary vulcanizing agents.



8. An article of footwear including sole and upper portions and consisting of rubber compound containing as an essential ingredient between fifty (50) and one hundred (100) parts by weight of carbon black to each one hundred (100) parts of rubber in the compound.

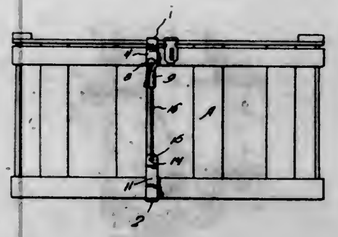
1,578,876. TRAIN CONTROL. CHARLES S. BUSHNELL, Rochester, N. Y., assignor to General Railway Signal Company, Gates, N. Y., a Corporation of New York. Filed Oct. 9, 1922. Serial No. 593,374. 23 Claims. (Cl. 246—63.)

12. A speed control system of the character described comprising, in combination with brake control apparatus on the vehicle including a time interval device of the balance wheel type, of means partly on the vehicle and partly on the track and cooperating through an intervening air gap for imposing control influences on said vehicle in succession dependent on the distance of travel of said vehicle.



1,578,877. PISTON CONSTRUCTION FOR CAM ENGINES. HAROLD CAMINEZ, Farmingdale, N. Y. Filed Dec. 14, 1925. Serial No. 75,281. 14 Claims. (Cl. 74—108.)

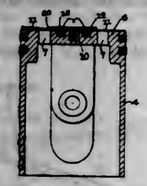
1. In a cam engine having link connected pistons cooperating with a central cam, in combination, a piston, a piston pin therefor, a plurality of members on said pin, to which the links are attached, and means for attaching said members rigidly together so that they may oscillate in unison about the piston pin axis.



1,578,878. ELECTROMAGNETIC SWITCH MECHANISM. HERBERT W. CHENEY, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Feb. 9, 1921. Serial No. 443,499. 15 Claims. (Cl. 172—280.)

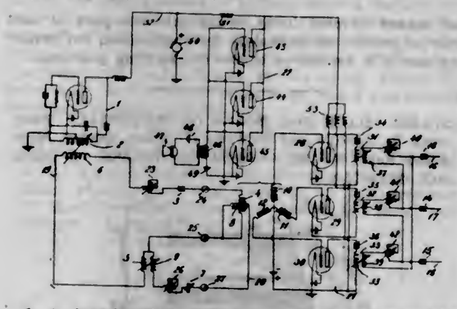
1. In combination with a motor controller of the type having electromagnetically actuated means for connecting a motor in starting relation to a source of supply and for connecting it in running relation to said supply, of self-contained means comprising operatively assembled elements mounted on a common support and detachably associated with said controller for causing said electromagnetically actuated means to automatically connect said motor in starting relation for a predetermined time and then to connect it in running relation.

11. In an automatic controller of the type having a first-position control coil and a second-position control coil, a switch for controlling said first-position coil, a coil connectible in shunt to said control switch, a switch in said shunt circuit, a switch for transferring energization from said first-position to said second-position coil, and a single armature actuable by said shunt coil for controlling both said shunt switch and said transfer switch.



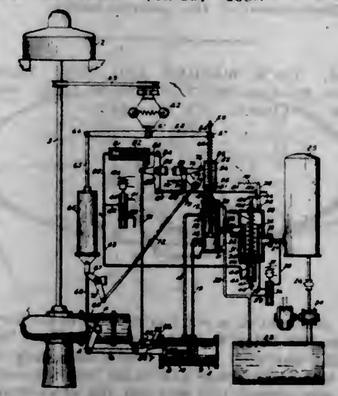
1,578,879. SAFETY STRAP FOR SHIPPING CRATES. EDWARD W. CRABTREE, Hillsboro, N. C., assignor of one-half to N. W. Brown, Orange County, N. C. Filed June 27, 1925. Serial No. 39,940. 1 Claim. (Cl. 217—66.)

A device of the class described including a U-shaped strap member, link members pivotally engaged with the terminals of said strap member, a second U-shaped strap member having one terminal pivotally engaged with one link member, and its other terminal formed in a sleeve and provided with an aperture so that the other link member may be inserted through the sleeve and through the aperture and then bent over upon itself.



1,578,880. COMPRESSOR. EDWARD R. DE LUIZ, Flint, Mich., assignor to Copeland Products, Inc., Flint, Mich., a Corporation of Michigan. Filed Apr. 30, 1924. Serial No. 710,134. 5 Claims. (Cl. 230—34.)

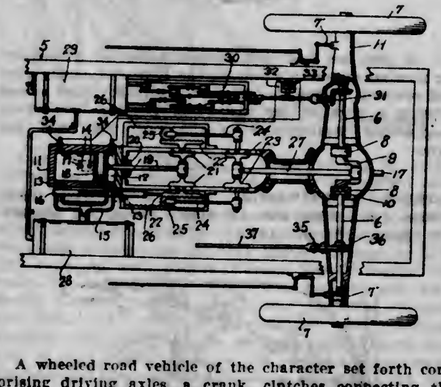
1. In a compressor, in combination, a piston having a port in its head, a block at one side of said port, a metal flap hinged to said block upon an axis parallel to the head, a clamping member engaging said block and having a part projecting over said flap and adapted to permit limited opening thereof, and means for securing



said member and block to the piston head, the hinge parts being loosely fitted whereby the flap may seat itself freely.

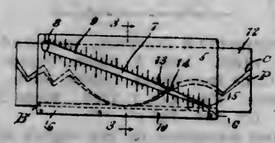
1,578,881. POLYPHASE-CARRIER-CURRENT BROADCASTING SYSTEM AND GENERATOR. ROBERT D. DUNCAN, Jr., East Orange, N. J., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Jan. 9, 1925. Serial No. 1,374. 4 Claims. (Cl. 179—2.)

1. A broadcasting system comprising a poly-phase electric power transmission line, a source of poly-phase high frequency carrier current connected to said power transmission line, means for modulating said carrier current in accordance with signals to be transmitted over said power transmission line, and receiving apparatus responsive to the modulated carrier current and operative to reproduce said signals, said receiving apparatus being connected to said power transmission line.



1,578,882. PRIME-MOVER CONTROL SYSTEM. RALPH H. EARLE, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed July 31, 1924. Serial No. 729,223. 20 Claims. (Cl. 137—158.)

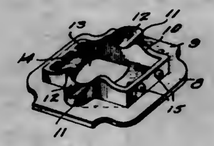
1. In a system for starting a prime mover, a gate for admitting operating fluid to said prime mover, means for operating said gate at a normal rate and at a slower rate, means for holding said gate in closed position, means for causing said operating means to apply force to said gate toward gate-closed position when said gate is in closed position, means for releasing said holding means, and means for then causing said operating means to operate said gate at said slower rate.



5. In a control system for stopping a prime mover, a gate for admitting operating fluid to said prime mover, means for operating said gate, a single control element for controlling the supply of power to said operating means, and means for preventing said control element from entirely cutting off the supply of power until said gate is closed.

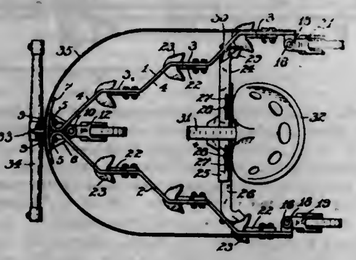
1,578,883. VEHICLE PROPELLING MEANS. MARSHALL A. ESTES, Estes, Va. Filed Sept. 15, 1924. Serial No. 737,769. 1 Claim. (Cl. 180—66.)

A wheeled road vehicle of the character set forth comprising driving axles, a crank, clutches connecting the crank to the inner opposed ends of the axles, a motor, a reciprocating piston therein, a piston rod carried by the piston and projecting through one head of the motor, a crosshead connected to the outer end of the piston rod, racks on the opposite ends of the crosshead, movable spur gears meshing with the racks, other racks meshing with the spur gears from diametrically opposite points, a second cross-head, rods connecting the spur gears and second mentioned crosshead, a link connecting the second mentioned crosshead with the crank of the driving axles, a mitre-gear on one of the driving axles, a reciprocating compressor, a mitre-gear carried by the compressor for engagement with the mitre-gear on the driving axle, transmitting means between the compressor and mitre-gear thereof, a fuel storage tank in communication with the compressor, a reciprocating valve connected to the first mentioned crosshead and disposed between the fuel storage tank and motor to admit fuel into the combustion chambers of the motor, and clutches between the driving axles and wheels.



1,578,884. GAUGE FOR MOLDING KNIVES. ALBERT W. FARWELL, Sterling, Mass., assignor to Simonds Saw and Steel Company, Fitchburg, Mass., a Corporation of Massachusetts. Filed Jan. 27, 1925. Serial No. 5,058. 8 Claims. (Cl. 33—185.)

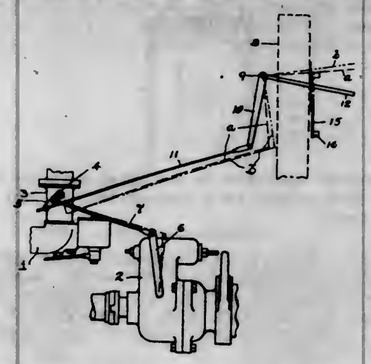
1. A gauge for determining the contour of molding knives of the type adapted to be mounted on the faces of a rotary head with their cutting ends projecting tangentially, characterized by a pattern line and a plotting line



spaced from said line different distances through the length thereof according to the differences between depths of cut and knife projection at different degrees of projection.

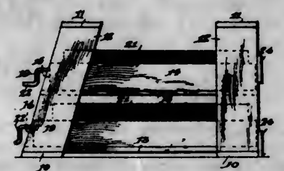
1,578,885. CURB BOX AND COCK SUPPORT. JOHN R. FLINN, Johnstown, Pa., assignor to Champion Specialty Company, a Corporation of Pennsylvania. Filed Apr. 11, 1925. Serial No. 22,339. 5 Claims. (Cl. 137—13.)

1. A curb box and cock support including a supporting member engageable beneath the cock of a supply pipe and adapted for the reception of a curb box, and means forming a part of the supporting member to prevent longitudinal displacement of the curb box from the latter.



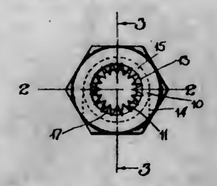
1,578,886. CULTIVATOR. JOHN J. FRAZIER, Rushville, Ind. Filed Dec. 13, 1922. Serial No. 606,568. 1 Claim. (Cl. 97—192.)

In a corn cultivator, the combination with a frame including a pair of side members pivotally connected together at their forward ends and diverging rearwardly, of a transversely extending spacer bar connected to the rear end of each of said frame members, means for varying the length of said bar to vary the space between the rear ends of the frame members, a vertical spindle secured to the front ends of the frame members and a vertical spindle secured to each of the rear ends of the frame members, a castor wheel fork pivotally mounted on each of said spindles and vertically adjustable thereon to permit the bodily vertical adjustment of the frame, cultivators carried by said frame, a riding seat mounted on said spacer bar, and a U shaped shield having its legs extending rearwardly surrounding said frame and extending downwardly to substantially enclose the frame and the cultivators, the legs of the shield being laterally adjustable with the rear ends of the side members.



1,578,887. THROTTLE CONTROL FOR GAS ENGINES AND THE LIKE. JOHN T. FROST, Duluth, Minn., assignor to Clyde Iron Works, Duluth, Minn., a Corporation of Maine. Filed Oct. 7, 1924. Serial No. 742,261. 3 Claims. (Cl. 137—140.)

1. In control mechanism for gas engines and the like, the combination with a throttle valve and a governor normally maintaining same in predetermined position; of a manually operable lever connected with said valve, whereby the setting of the latter may be varied optionally to accelerate or decelerate said engine from governor maintained speed, said lever being ordinarily freely movable so as not to affect the operation of said governor;

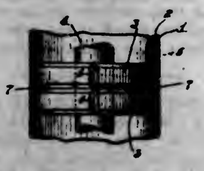


and means adapted to be swung into the path of said lever to prevent its movement for acceleration but permit any one of a number of engine decelerating positions.

1,578,888. RACK FOR ROLLS OF MATERIAL, THEODORE B. GANONO and HOWARD H. MEAD, Quincy, Mich. Filed Sept. 8, 1924. Serial No. 736,583. 1 Claim. (Cl. 211—18.)

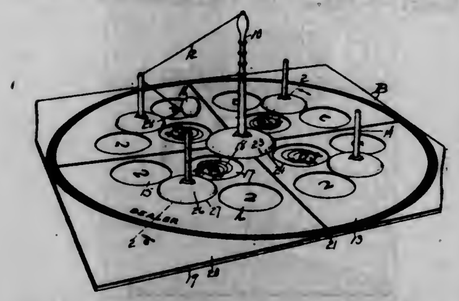
A device of the class described comprising vertical terminal frames, guide rails connected at the ends to said frames with their confronting edges in spaced parallel relation, supports for material including vertical sides and ends, said sides slidably engaging said rails, and a longitudinally directed lower member attached at the ends to the vertical ends of the material support and depending below the line of the ends and sides thereof and between said guide rails, said lower member being laterally enlarged at the ends to movably engage the confronting edges of the guide rails, and preventing lateral displacement of the material holder.

1,578,889. LOCK WASHER AND NUT. THOMAS H. HARRIS, Riverton, Ill. Filed Dec. 18, 1925. Serial No. 76,300. 2 Claims. (Cl. 151—14.)



1. In combination a nut having a threaded bore and a recess on its outer face of greater diameter than the bore, said nut also having a slot extending laterally therein between the bore and recess, and a normally flat locking disk slidable into said slot and of annular formation, said disk having bolt engaging teeth on its inner periphery.

1,578,890. MANUFACTURE OF BOOTS AND SHOES. EDWIN REYNOLDS HAYDEN, North Preston, Victoria, Australia, assignor of one-third to Benjamin Thomas Roy Chadd and one-third to William Henry John Bailey, both of Ivanhoe, Melbourne, Australia. Filed Oct. 9, 1924. Serial No. 742,689. 2 Claims. (Cl. 12—42.)



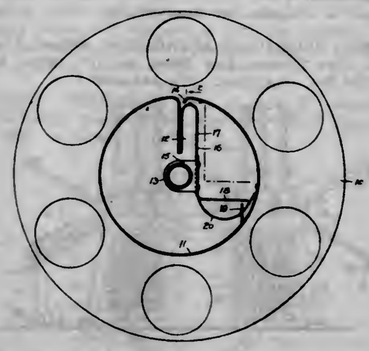
1. A boot or shoe comprising a sole split inwardly along its edge to form a thin marginal lip extending around the fore-part of the sole at its upper surface and terminating near the waist portion thereof, the waist and heel portions of the sole being left intact, and an upper having the lower edge portion of its forward portion inturned within the recess thus formed between said lip and the lower marginal portion of the sole beneath said lip, said inturned portion of the upper being secured between said lip and lower marginal portion of the sole by means of stitches passing through the three superimposed members, and a reinforcing shank disposed within the upper and extending from a point adjacent the ends of said lip to the heel of the shoe, the waist and heel portions of the upper having its lower edge portion turned beneath the shank and secured between the shank and the sole.

1,578,891. DRY CELL. WILLIAM F. HENDRY, Ossining, N. Y., assignor to Manhattan Electrical Supply Company, Incorporated, New York, N. Y., a Corporation of Massachusetts. Filed Dec. 27, 1923. Serial No. 682,930. 4 Claims. (Cl. 136—123.)

1. In a dry cell, two electrodes, depolarizing mix between said electrodes, passageways through said mix, and circular passageways around said mix into which said first mentioned passageways open.

1,578,892. GAME. FRANK P. HOLMAN, Hartford, Conn. Filed Mar. 29, 1924. Serial No. 702,820. 21 Claims. (Cl. 273—97.)

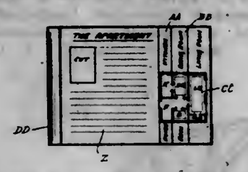
1. A game board divided into field sections, one for each player, a supporting post, a rolling element connected with said post by a flexible connection of a length to enable said element to reach all of said fields, and a pocket located in the upper surface of each of said fields to permit said element to roll into it.



18. A game board comprising a field, a post rising from said field, a ball, a finger projecting from one side of said ball, an obstruction in said field and a flexible connection extending from the end of said finger to the top of said post to impart a gyratory movement to the end of said finger to throw said connection over said obstruction.

1,578,893. TOBOGGAN SLIDE. HENRY O. JOHNSON and FRANK J. RUBBS, Minneapolis, Minn., assignors to Playground & Gymnasium Equipment Co., Minneapolis, Minn., a Corporation of Minnesota. Filed Jan. 18, 1926. Serial No. 82,007. 8 Claims. (Cl. 104—69.)

3. A toboggan comprising a frame formed by longitudinal and transverse bars and a bottom member, said parts being rigidly connected, said side rails having laterally spaced longitudinally extended portions at the wheel mountaings, bearing blocks arranged in pairs and interposed between the laterally spaced portions of said side rails and said bottom member, wheels located between the cooperating bearing blocks and provided with shafts mounted therein, said wheels depending through and below the bottom of the toboggan, and retaining brackets comprising plate-like members applied to the bottom of said toboggan below the corresponding wheel bearings and provided with openings through which the bottoms of the wheels depend, nut-equipped bolts passed through the plates of said brackets, through said bearing blocks and through the overlying laterally spaced portions of said side bars, the plate portions of said retaining brackets having depending lugs engageable with rails to guide the toboggan in its descent on the rails.

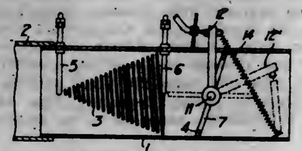


1,578,894. FILM REEL FOR MOTION-PICTURE-PROJECTING APPARATUS. HENRY W. JOY, Crugers-on-Hudson, N. Y. Original application filed Feb. 5, 1924, Serial No. 690,706. Divided and this application filed Nov. 12, 1924. Serial No. 749,891. 2 Claims. (Cl. 242—74.)

1. A reel for motion picture film, comprising a slotted core having a radially disposed wall on one edge of said slot and an inwardly curved lip on the other edge, and means for yieldably engaging the film against the said

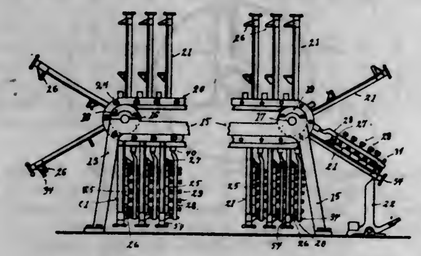
wall, said means comprising a loosely mounted member having a wall disposed parallel to said radial wall in the core, and a spring carried by the member and engaged with the core to yieldably press the wall of the member in the direction of the wall of the core.

1,578,895. CHART. AGNES L. JOYCE, New York, N. Y., assignor to Carl Kraft, New York, N. Y. Filed Nov. 1, 1923. Serial No. 672,056. 7 Claims. (Cl. 283—42.)



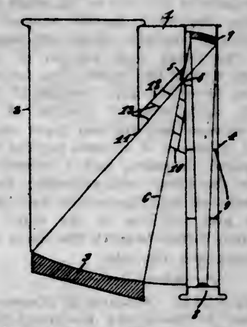
1. Graphical charts consisting of detailed views adapted to be superposed, each of which contain one or more detail elements, said detailed views adapted to be assembled into a unified picture; in which series each detailed view is accompanied by descriptive matter.

1,578,896. STENCIL SHEET. GUY LEONARD, Baltimore, Md. Filed Dec. 17, 1925. Serial No. 76,105. 14 Claims. (Cl. 41—38.6.)



5. A stencil-sheet of loose-fibered paper coated with shellac tempered by aluminum stearate and softened by oil or fatty material.

1,578,897. ELECTRIC AIR HEATER. CARL-OLOV LINDBERG, Stockholm, Sweden. Filed June 11, 1924. Serial No. 719,328. 1 Claim. (Cl. 219—39.)

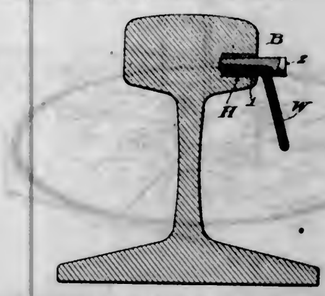


In an air-heater for explosive engines, a tube, a damper in said tube adapted to control the flow of air therethrough, an electric heating coil in said tube, a manually operable switch adapted to control the circuit of said coil and a mechanical connection between said switch and said damper adapted to close the damper at the opening of said circuit.

1,578,898. GLUE-JOINT APPARATUS. GEORGE LITTLEFORD, Fort Thomas, Ky. Filed Apr. 17, 1922. Serial No. 553,590. 3 Claims. (Cl. 144—287.)

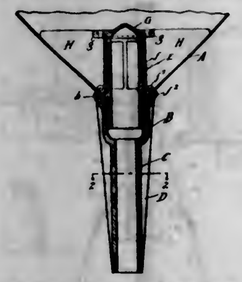
1. A glue press apparatus comprising a stock supporting member adapted to support a plurality of stock members to be united side by side, and transversely thereof at a plurality of points of support intermediate of their lengths, a plurality of resiliently energized plungers to independently engage the respective stock members at a plurality of points intermediate of their lengths to press the stock members individually into contact with the stock supporting member, means to support said plungers in relation to the stock supporting member, and means to press the stock members into mutual engagement at their glue points while assembled and under pressure from said plungers to unite said individual stock members into composite stock members.

1,578,899. REFLECTING TELESCOPE. EDWARD LOHMANN, Greenville, Ohio. Filed Feb. 21, 1924. Serial No. 694,360. 8 Claims. (Cl. 88—32.)



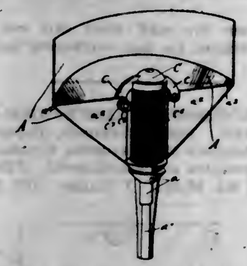
1. In a telescope the combination with separate tubes, an eye piece connected to one of the tubes and an imperforate mirror in the other tube for reflecting an image to the eyepiece, of a diaphragm through which the light cone is projected from one tube to the other, there being an opening in the diaphragm of the same diameter as that portion of the light cone at the opening.

1,578,900. POROUS ARTICLE OF RUTILE AND METHOD OF MAKING THE SAME. SIMON J. LUBOWSKY, Jersey City, N. J., assignor to Metal & Thermit Corporation, Chrome, N. J., a Corporation of New Jersey. Filed Oct. 10, 1923. Serial No. 667,690. 8 Claims. (Cl. 25—156.)



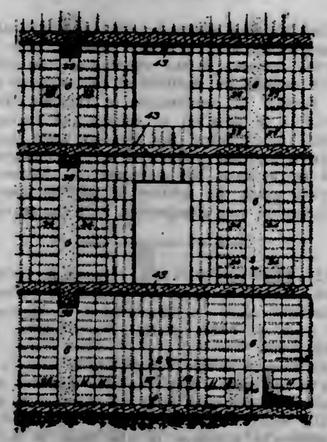
1. A shaped, refractory, chemical-resisting article, formed of crushed rutile, the particles of which are bound together to form a porous body.

1,578,901. RAIL BOND. CHARLES G. MCCAULLEY, Jacksonville, Fla. Filed Sept. 18, 1922. Serial No. 588,971. 5 Claims. (Cl. 173—283.)



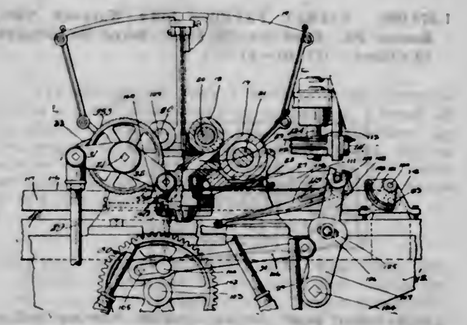
1 A rail head bond including in combination with the rail head having a socket therein, a tapered channel pin, a bond-wire lying in and filling the channel of the pin, and a ferrule fitting the socket and having its inner surface tapered to receive the channel pin and to conform to the taper thereof.

1,578,902. FUNNEL FOR TRANSFERRING LIQUIDS. ROBERT B. MCGOWAN, Cincinnati, Ohio, assignor to John D. Berger, Cincinnati, Ohio. Filed Apr. 2, 1923. Serial No. 629,268. 4 Claims. (Cl. 210,155.)



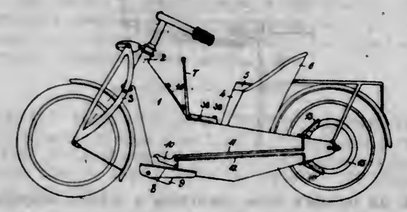
1. In a funnel for transferring liquids, a cage carrying a strainer within said funnel body, and a plurality of baffle plates secured to said cage.

1,578,903. FUNNEL FOR TRANSFERRING LIQUIDS. ROBERT B. MCGOWAN, Cincinnati, Ohio, assignor to John D. Berger, Cincinnati, Ohio. Filed Nov. 2, 1923. Serial No. 672,258. 4 Claims. (Cl. 210—158.)



1. In a funnel for transferring liquids, a plurality of baffle plates integral with said funnel, a removable strainer within said funnel and means secured to said baffle plates for holding said strainer in operative position.

1,578,904. BUILDING CONSTRUCTION. JOSEPH J. MOMBS, Washington, D. C., assignor of one-half to Charles F. Carusi, Washington, D. C. Filed Jan. 17, 1925. Serial No. 3,185. 9 Claims. (Cl. 72—1.



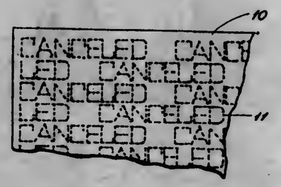
1. A wall construction composed of spaced tile wall sections laid in courses mainly of vertically set tile, the outermost tile of some courses set horizontally, cementitious columns intermediate the wall sections and keyed thereto by the material of said columns entering into the cells of the horizontally set tiles.

1,578,905. DOUGH-DEPOSITING DEVICE. JOEL MOORES, Cincinnati, Ohio, assignor to The J. H. Day Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Dec. 7, 1922. Serial No. 605,412. 10 Claims. (Cl. 107—29.)

4. In a device of the class described the combination of a table, a hopper above the table, a reciprocating die for receiving a plastic from the hopper and for discharging plastic deposits on the table, means to reciprocate the die, means for severing plastic extending between the die and the deposits, and means for vertically adjusting the severing means between the die and the table.

1,578,906. MOTOR CYCLE. EUGENE MARIE MOREL, Brussels, Belgium, assignor to Société Anonyme des Anciens Etablissements Ch. Fondes, Vilvorde, Belgium, a Belgian Company. Filed May 28, 1923. Serial No. 642,074. 6 Claims. (Cl. 180—35.)

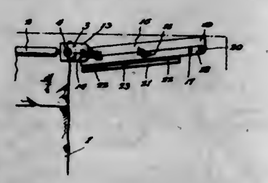
1. In a motor cycle, a closed frame of V shaped form composed of laterally U shaped members welded together, a motor and transmission members enclosed by the said frame and disposed so that the cylinder of the motor is pointing downwardly and located in the exterior angle of the V of the frame.



1,578,907. MIRROR RING. ROBERT E. NAUMBURG, Winchester, Mass. Filed Sept. 26, 1925. Serial No. 58,955. 3 Claims. (Cl. 63—2.)

1. A combined ring and hand mirror comprising a finger ring having a seat for a setting, and having as a setting a spherical reducing reflector of which the diameter of

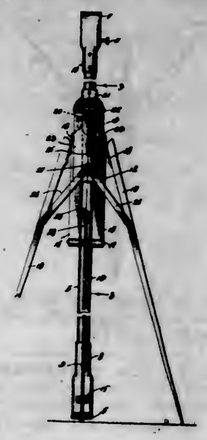
the exposed aperture of the reflector and the effective curvature of its spherical surface are proportioned to each other substantially as one to three, whereby to reflect the head and shoulders of the wearer at a normal reaching distance of the hand from the observing eyes, the reflecting surface being of a customary size for decorative gem settings.



1,578,908. SAFETY PAPER. JOHN WALLACE NEFF, Easton, Pa. Filed Oct. 24, 1923. Serial No. 670,539. 10 Claims. (Cl. 91—67.95.)

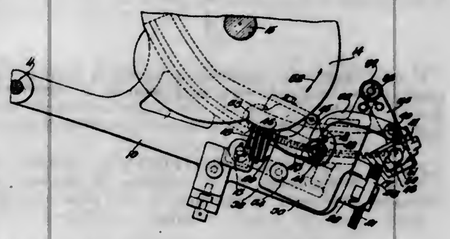
1. A safety paper having invisible warning indicia printed thereon with a colorless chemical salt, said indicia being rendered visible when the paper in treated with bleaching agents.

6. The method of making safety paper which consists in printing on the paper invisible warning indicia, which when discernible, would inherently nullify the paper, with a colorless chemical salt.



1,578,909. INVALID'S TABLE. CLAUDE M. NEWMAN, Chicago, Ill. Filed July 28, 1925. Serial No. 46,641. 4 Claims. (Cl. 45—82.)

3. An invalid's table comprising a bracket adapted to be secured to a support and extend therefrom, an arm formed of inner and outer sections, said inner section being pivotally connected with said bracket for swinging movement in a horizontal plane and said outer section being pivotally connected with the outer end of the inner section for swinging movement in a horizontal plane from an extended position to a folded position with its free end engaged with and supported by said bracket, and a table top carried by said outer section and movable from an inoperative to an operative position.

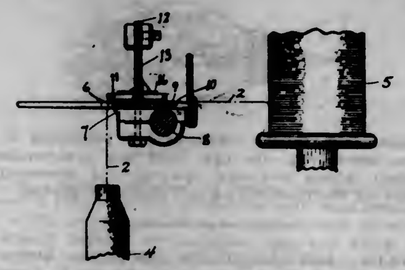


1,578,910. GOLF-BAG HOLDER. JAMES W. NIDLS, Bakersfield, Calif. Filed Nov. 16, 1925. Serial No. 69,497. 7 Claims. (Cl. 150—1.5.)

3. A golf bag supporting stand comprising a staff adapted to hold the golf bag, a pair of legs hinged to the staff for lateral swinging movement toward and away from each other and for forward and rearward swinging movement toward and away from the staff, a rod slidably associated with the lower end of the staff and projecting below the lower end of the latter so as to be engaged with the ground and forced upwardly when the bag and stand are deposited upon the ground, and an operative connection between the rod and the legs embodying a member having its upper end hinged to the staff and having its lower end pivotally connected to the upper end of the rod so as to be swung by the

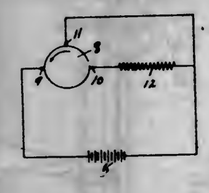
latter away from the staff when said rod is forced upwardly for swinging the legs rearwardly and spreading the same.

1,578,911. BUNCH-BUILDING MECHANISM FOR SPINNING FRAMES. JONAS NORTHROP, Hopedale, Mass., assignor to Hopedale Manufacturing Company, Milford, Mass., a Corporation of Massachusetts. Filed June 26, 1925. Serial No. 39,682. 7 Claims. (Cl. 242—43.7.)



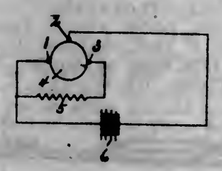
1. Bunch building mechanism for spinning frames having means comprising a lobed traverse cam for controlling the traverse of the winding on the bobbin and means for varying the position of the traverse including a rack, having, in combination, a tumbler, means for supporting it in position to engage the traverse cam, and means for turning the tumbler from inoperative to operative position comprising a part adapted to be actuated by the rack, the movement of the rack in the direction to start the spining of bobbins operating to turn the tumbler into engagement with the traverse cam.

1,578,912. TENSION DEVICE. HENRY A. OWEN, Whitinsville, Mass., assignor to Whitin Machine Works, Whitinsville, Mass., a Corporation of Massachusetts. Filed Sept. 5, 1925. Serial No. 54,658. 1 Claim. (Cl. 242—150.)



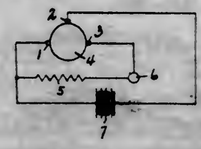
A yarn tension device comprising a base, a circular aperture in the base, a disk rotatably mounted in a bearing concentrically formed with the aperture in said base, a centrally located circular aperture in said disk registering with the aperture in the base, a second disk superimposed on the first disk, a pin whose axis is at right angles to the upper face of the base and offset

from the centre of the aperture in the first disk, a bracket in stationary relation with the base and supporting the pin, the second disk rotatably and slidably mounted



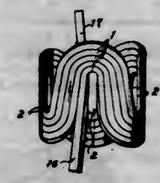
thereon, a notch in the base guiding the yarn between the surfaces of the two disks, and an inclined member to facilitate the threading of the yarn.

1,578,913. GENERATOR. LAURENCE M. PERKINS, Syracuse, N. Y. Filed Oct. 20, 1920. Serial No. 418,181. 7 Claims. (Cl. 171—223.)



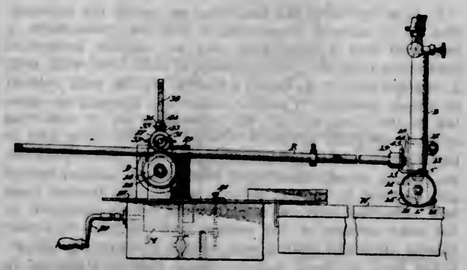
1. The combination with a variable speed generator having a brush substantially on neutral and a brush off its neutral to such an extent that the angle between the two brushes is less than 180 electrical degrees, an external source of E. M. F. connected to said brushes, and a third brush substantially on the other neutral point, of a shunt field connected between the brush which is off neutral and said third brush.

1,578,914. GENERATOR. LAURENCE M. PERKINS, Syracuse, N. Y., assignor of one-half to Owen-Dyneto Corporation, Syracuse, N. Y., a Corporation of New York. Filed Apr. 18, 1922. Serial No. 555,335. 3 Claims. (Cl. 171—223.)



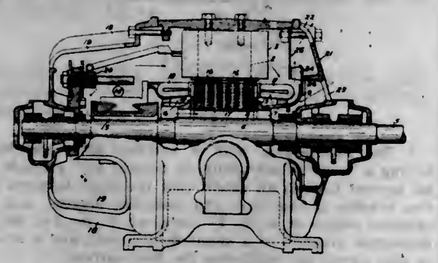
1. The combination with a variable speed generator having a brush substantially on neutral, a brush off its neutral to such an extent that the angle between the two brushes is less than 180 electrical degrees, and an external source of E. M. F. connected to said brushes, of a third brush substantially on the other neutral point, and a shunt field connected across the brushes on the neutral points.

1,578,915. GENERATOR. LAURENCE M. PERKINS, Syracuse, N. Y., assignor of one-half to Owen-Dyneto Corporation, Syracuse, N. Y., a Corporation of New York. Filed June 1, 1922. Serial No. 565,088. 4 Claims. (Cl. 171—228.)



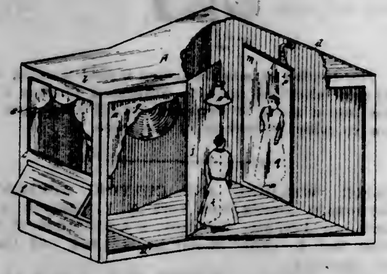
1. The combination with a variable speed generator having a brush substantially on neutral and a brush off its neutral to such an extent that the angle between the two brushes is less than 180 electrical degrees, and an external source of E. M. F. connected to the two before mentioned brushes, of a shunt field circuit, and a device in said circuit for regulating the field current.

1,578,916. FIELD WINDING FOR ELECTRIC MACHINES. LAURENCE M. PERKINS, East Pittsburgh, Pa., assignor of one-half to Owen Dyneto Corporation, Syracuse, N. Y., a Corporation of New York. Original application filed Apr. 13, 1922, Serial No. 552,311. Divided and this application filed Mar. 24, 1925. Serial No. 18,006. 4 Claims. (Cl. 171—252.)



1. The method of manufacturing a field winding for a multi-polar electrical machine comprising forming a conductor into a series of loops and rolling the looped conductor to telescope certain of the loops.

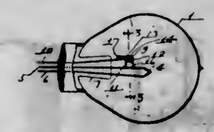
1,578,917. WELDING AND CUTTING APPARATUS. RAYMOND C. PIERCE, New York, N. Y., assignor to The Linde Air Products Company, a Corporation of Ohio. Filed Nov. 5, 1920. Serial No. 421,961. 35 Claims. (Cl. 266—23.)



1. In a machine of the class described, the combination of heating means, a carriage solely supported by wheel means and adapted to carry said heating means along a surface to be heated, stationary power means independent of said carriage, and driving connection means between said power means and carriage enabling said power means to effect the movement of said carriage and the heating means thereon along said surface and also enabling said carriage to conform to longitudinal and transverse irregularities of said surface.

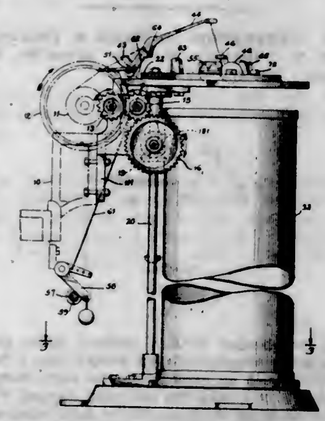
1,578,918. DYNAMO-ELECTRIC MACHINE AND METHOD OF VENTILATING SAME. WILLIAM H. POWELL, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Dec. 3, 1920. Serial No. 427,958. 6 Claims. (Cl. 171—252.)

1. In a dynamo-electric machine, an armature, a rear end-turn support having a radial portion and an axial portion said axial portion having openings, a fan carried by said radial portion, a housing for said machine, a baffle extending radially inward from said housing to the front side of said fan and a baffle extending axially inward from said housing to the rear of said fan, said housing having openings radially within said axial baffle communicating with the openings in said end-turn support, and openings between said baffles.



1,578,919. ADVERTISING CABINET. LINVILLE H. QUINN, Sr., and THOMAS G. KLEIN, Terre Haute, Ind. Filed Nov. 11, 1925. Serial No. 68,446. 3 Claims. (Cl. 88—1.)

1. In a device of the character set forth, the combination of a cabinet comprising a top, two side-walls, a back-wall and a front-wall, and an angular projection projecting from the lower portion of said front-wall, with a concave-mirror movably mounted within said cabinet in proper position to project reflections through an opening in the front-wall of the cabinet, a set of reflecting mirrors, properly adjusted relative to each other and in position to reflect reflections upon said concave-mirror, an opaque screen positioned behind said concave-mirror and adapted to conceal objects in the rear thereof from said reflecting mirrors, a plate-glass screen stationed in the rear portion of the cabinet and adapted to reflect objects stationed behind said opaque screen when illuminated from in front and to expose objects stationed in the rear thereof when illuminated from behind the same, all substantially as set forth.

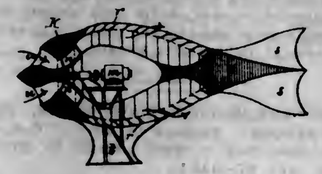


1,578,920. ELECTRIC LAMP. REUBEN D. ROBINSON, Grand Rapids, Mich. Filed Nov. 16, 1923. Serial No. 675,031. 4 Claims. (Cl. 176—34.)

1. In an electric lamp: a translucent globe; an electric-light-producing element within the globe; a second electric-light-producing element within the globe and between said first-mentioned element and the rear of the globe; an opaque light-shield extending between said elements to prevent the light from said second-mentioned

element from shining forwardly but permitting it to shine downwardly, the light from said first-mentioned element shining forwardly, upwardly and downwardly; means for electro-energizing said elements separately.

1,578,921. TEXTILE-COILING MACHINE. EDWIN O. ROE, New Bedford, Mass., and LEONARD P. FRIEDER, New York, N. Y., assignors to National Spun Silk Co., Inc., New Bedford, Mass., a Corporation of Massachusetts. Filed Aug. 1, 1924. Serial No. 729,452. 8 Claims. (Cl. 19—159.)



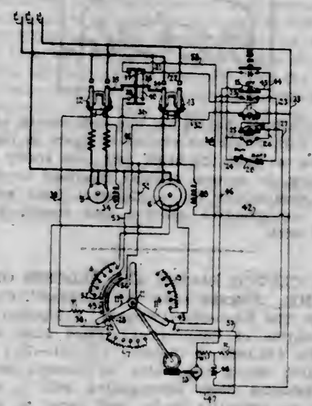
1. In a machine of the class described, the combination with a receptacle, of devices for automatically feeding a sliver and packing it in the receptacle, a support carrying the feeding devices and movable by accumulation of fibers in the receptacle when the capacity of the receptacle is reached, a stop motion element mounted on said support, and cooperating stop motion devices operated by said element when the support is moved by the accumulation of fibers in the receptacle.

1,578,922. FOUNTAIN TOOTHBRUSH. JOSEPH A. SARGEAY, Sherbrooke, Quebec, Canada, assignor of one-half to Forrest W. Lord, Sherbrooke, Quebec, Canada. Filed Jan. 4, 1923, Serial No. 610,659. Renewed Feb. 26, 1926. 3 Claims. (Cl. 15—137.)

1. A fountain tooth brush comprising a handle including a back and a hollow body portion, a bristle section removably inserted in said back, a hollow screw passed through said back and bristle section and having an aperture in a wall thereof, said handle having a channel formed therein connecting said aperture with the hollow body, and a follower slidably mounted in said hollow body.

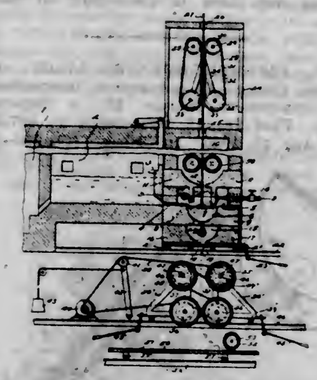
1,578,923. TURBINE. GEORG ARTHUR SCHLOTTER, Dresden, Germany. Filed Nov. 12, 1921. Serial No. 514,741. 6 Claims. (Cl. 170—125.)

1. In a turbine arranged as suction and fluid current stemming apparatus, the combination with rings arranged one within another, of annular chambers each of which is situated between two adjacent rings and which are outwardly directed with their smallest openings in the shape of nozzles by a decrease of the diameters of the separate rings towards the point of the turbine, said rings increasing in section towards the point mentioned.



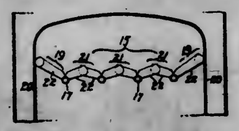
1,578,924. PUMP. ANTHONY SCHROEDER, Cleveland, Ohio, assignor of one-half to James Merle Finney, Cleveland, Ohio. Filed July 29, 1922. Serial No. 578,314. 8 Claims. (Cl. 103—163.)

1. In apparatus adapted for delivering measured quantities of greases and like semi-fluid substances, the combination of a pump cylinder having an inlet port and an outlet port near one end, the inlet port being disposed between the outlet port and the end of the pump cylinder that is adjacent to the said ports, a freely movable inner cylinder within the pump cylinder that is open at the end which is adjacent to the said ports and is formed with a port arranged to register with the outlet port in the pump cylinder when the inner cylinder is moved in one direction and closes the inlet port, and is out of register with the outlet port when the cylinder is moved in the other direction and the inlet port is uncovered, and a piston movable within the said inner cylinder and operating to move it when the piston is operated.



1,578,925. MOTOR CONTROLLER. EDWIN W. SEEGER, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 10, 1925. Serial No. 22,009. 11 Claims. (Cl. 172—179.)

2. In a two-motor printing press controller, the combination with a small motor to be energized for inching and for starting and a large motor to be energized for running, electroresponsive switches adapted when energized to establish power connections for said motors respectively, push button switches normally interrupting the energizing circuit of said small motor switch and each adapted while depressed to establish said circuit



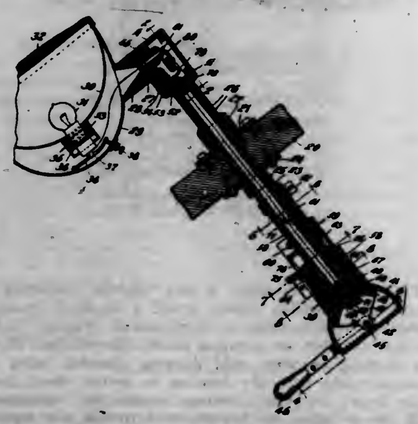
for closure of said switch and means independent of one of said push-button switches but responsive to another when depressed for energizing said large motor switch subject to a delay.

1,578,926. GLASS-MAKING MACHINE. GEORGE A. SHIELDS, Columbus, Ohio. Filed Feb. 19, 1923. Serial No. 619,916. 5 Claims. (Cl. 49—3.)

1. In a glass machine, a flow chamber including a trough for receiving molten glass, a drawing chamber above the flow chamber, a supplemental chamber below the flow chamber, an elevating mechanism mounted above the drawing chamber, said drawing chamber being in communication with the housing to permit sheet glass to be drawn from the drawing chamber for engagement with the elevating mechanism, said trough and supplemental chamber including separable sections for simultaneous movement away from each other to permit glass to flow in a downward direction from the trough and through the supplemental chamber.

1,578,927. ARCH BRICK. CHESTER A. SIEGEL, Arlington, N. J., assignor to American Arch Company, a Corporation of Delaware. Filed Dec. 31, 1921. Serial No. 526,126. 13 Claims. (Cl. 110—87.)

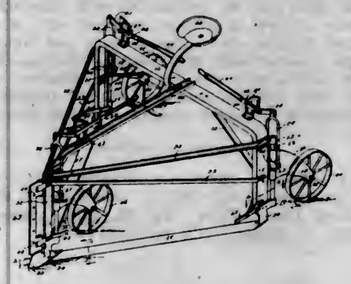
2. An arch brick having on one end convex and concave faces with coincident centers of figure in the midst of the brick, so that the brick may lean stably against another brick, in various angular relations on different spans, by engagement of its aforesaid faces with correlatively corresponding concave and convex faces of such other brick.



1,578,928. CLUTCH FACING AND PROCESS OF MAKING SAME. SUMNER SIMPSON, Bridgeport, Conn., assignor to The Raybestos Company, Bridgeport, Conn., a Corporation of Connecticut. Filed June 4, 1921. Serial No. 475,146. 4 Claims. (Cl. 91—70.)

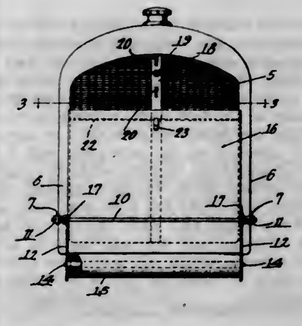
3. A clutch facing comprising an element formed of unwoven asbestos fibers impregnated with a saturant containing an asphaltic binder and cured to give the required strength and hardness, the amount of saturant being from about 10% to about 20% of the weight of fiber.

1,578,929. CLUTCH FACING AND PROCESS OF MAKING SAME. SUMNER SIMPSON, Bridgeport, Conn., assignor to The Raybestos Company, Bridgeport, Conn., a Corporation of Connecticut. Filed June 4, 1921. Serial No. 475,147. 4 Claims. (Cl. 91—70.)



3. A clutch facing comprising an element formed of unwoven asbestos fibers impregnated with a saturant containing a hardening binder and cured to give the required strength and hardness, the amount of the saturant being from 10% to about 20% of the weight of fiber.

1,578,930. DIRIGIBLY-MOUNTED LIGHT. CLIFFORD SKLAREK, Chicago, Ill., assignor to International Spotlight Corporation, Chicago, Ill., a Corporation of Illinois. Filed Feb. 18, 1922, Serial No. 537,890. Renewed Aug. 28, 1925. 20 Claims. (Cl. 240—61.)

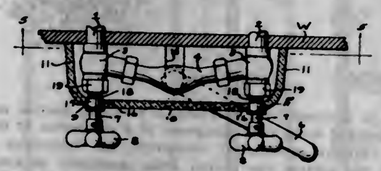


1. In a dirigible light, the combination with a support; of a member rotatably mounted on said support to turn thereon; a second member mounted on said first member to turn thereon about a different axis; and means for effecting independent rotation of each of said members about its respective axis, either simultaneously or in sequence and including a pair of coaxial, relatively rotatable shafts and a manually operable element operatively connected to said shafts, said element being rotatable bodily about one axis and pivotally movable about another axis at right angles thereto.

1,578,931. FRAME CONSTRUCTION FOR SURFACE CULTIVATORS. LEBBEUS J. SMAIL, Coffee Creek, Mont. Filed Nov. 8, 1921. Serial No. 513,882. 3 Claims. (Cl. 97—144.1.)

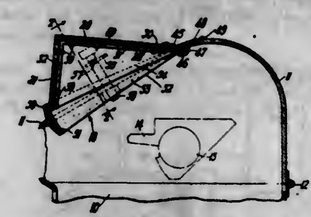
3. In combination, a horizontal V-shaped frame having at each corner a downwardly extending portion, means for connecting blades to the lower ends of said downwardly extending portions, caster wheels pivotally mounted to each of said downwardly extending portions, a lever device for independently raising and lowering each of said caster wheels relative to said downwardly extending portion, a hitch pivotally connected to one of said downwardly extending portions, a seat mounted on said V-shaped frame, all of said levers being arranged so that their free ends are adjacent to said seat.

1,578,932. AUTO RADIATOR COVER. ARTHUR J. SMITH, Hazleton, Pa. Filed Apr. 9, 1925. Serial No. 21,918. 2 Claims. (Cl. 259—132.)



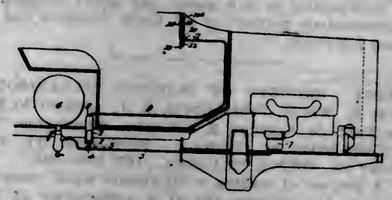
1. A radiator protector comprising a pair of spaced arms, arms adjustably connected with the first mentioned spaced arms, means for securing the first mentioned arm to the radiator of a motor vehicle, the second mentioned arms adapted to be adjusted towards and away from the radiator, a curtain carried by the last mentioned arms and adapted to move adjacent to the radiator, and means for holding the curtain in various positions of adjustment.

1,578,933. PROCESS OF TREATING SILK. HARRY B. SMITH, Albany, N. Y. Filed Mar. 8, 1923. Serial No. 623,730. 20 Claims. (Cl. 8—2.)



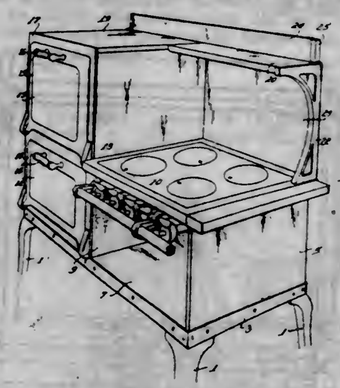
13. The process of treating silk which comprises subjecting the same to a hot bath having added thereto peroxid of sodium and a dye which is not substantially operatively affected by the bath to degum, bleach and dye the silk in the same bath.

1,578,934. COMBINATION FAUCET HOUSING. BERNARD G. STERN, Cleveland, Ohio. Filed Oct. 12, 1925. Serial No. 61,954. 8 Claims. (Cl. 137—111.)



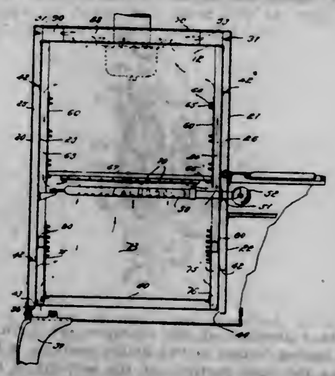
4. In combination with a dual sink valve arranged in front of the sink apron and having a single outlet, a cover substantially concealing the valve body, said cover having a brim extending to the apron, and members secured to the valve for maintaining the brim in contact with the apron.

1,578,935. TYPEWRITING MACHINE. BURNHAM C. STICKNEY, Rutherford, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Original application filed Jan. 24, 1922, Serial No. 531,353. Divided and this application filed Sept. 14, 1923. Serial No. 662,610. 9 Claims. (Cl. 197—186.)



1. A sound-deadening casing, for a typewriting machine, having in the wall thereof a window comprising two portions of light-transmitting pane, offset from one another at an angle; one of said pane portions being transparent and being in the line of the operator's vision of the printing position on the platen when the machine is in the casing, a support for said panes pivotally mounted on the casing, and a screw engaging the casing and said support for adjusting the angular setting of the window to divert reflected light from the operator.

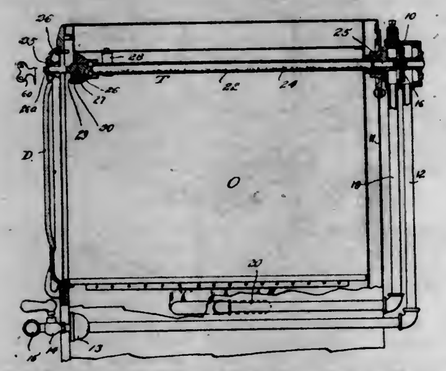
1,578,936. GASOLINE GAUGE FOR AUTOMOBILE ENGINES. JOHN C. TAPP, Monarch, Colo. Filed Aug. 22, 1924. Serial No. 733,574. 2 Claims. (Cl. 73—54.)



1. Apparatus for indicating the amount of gasoline in the supply tank of an automobile, comprising a vessel the bottom of which is disposed a substantial distance below the bottom of the tank and the top of which is disposed a substantial distance above the bottom of the tank, a fluid connection between the bottom of the tank and the bottom of the vessel, an indicating tube mounted on the dash board, a liquid container adjacent the indicating tube, composed of two compartments in juxtaposition and interconnected near the bottom, one of the compartments being closed and having a fluid connection from near its bottom to the bottom of the indicating tube, means normally disposed near the top of the other compartment and movable for displacement of liquid therein, and a fluid connection between said vessel and the top of the compartment having the connection to the indicating tube.

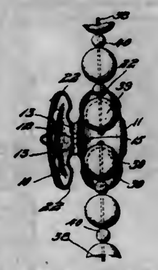
1,578,937. STOVE CONSTRUCTION. ALBERT H. TINNERMAN, Cleveland, Ohio. Filed Oct. 30, 1922. Serial No. 597,755. 5 Claims. (Cl. 126—39.)

1. In a stove construction having enamel panel plates forming the outer walls of the oven, a top panel for the oven having downwardly turned flanges on its edges, and inwardly turned flanges extending parallel with the body of the panel and wide enough to receive stove bolts or like fastening devices, and a front panel having inwardly extending lugs meeting the flange extensions and secured thereto.



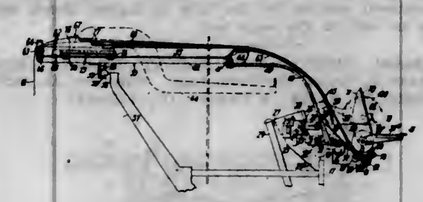
1,578,938. COOK-STOVE-OVEN CONSTRUCTION. ALBERT H. TINNERMAN, Cleveland, Ohio. Filed Aug. 20, 1923. Serial No. 658,281. 1 Claim. (Cl. 126—39.)

A cooking range construction comprising a double wall baking and broiler oven construction formed by inner and outer vertically disposed panel members spaced from



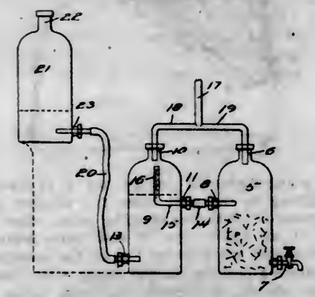
each other and open at the top and bottom to form air passages, two of said inner panel members being oppositely disposed and having vertically extending depressions therein forming passageways establishing communication between the exterior of the structure and the broiler oven and between the broiler oven and baking oven, a spacing member baffles disposed between the inner and outer panel members, obstructing the too free passage of air from the bottom to the top of the structure, an inner top oven panel member extending over the depressed ends of said inner side members and terminating short of the outer side panels whereby free passageways for cool air are afforded at the corners of the oven structure.

1,578,939. THERMOSTATIC CONTROL FOR STOVE OVENS. ALBERT H. TINNERMAN, Cleveland, Ohio. Filed May 9, 1924. Serial No. 711,955. 14 Claims. (Cl. 236—15.)



1. In a stove the combination of an oven structure including a door, a thermostatic control device enclosed by the oven and mounted independently of the door, a dial mounted upon the door and means extending from the thermostatic control device to the dial whereby the thermostat may be set without opening the door.

1,578,940. FASTENER FOR CHAINS. JOHN C. WACHA, Providence, R. I., assignor to George H. Cahoone Company, a Corporation of Rhode Island. Filed Jan. 29, 1926. Serial No. 84,746. 3 Claims. (Cl. 14—119.)

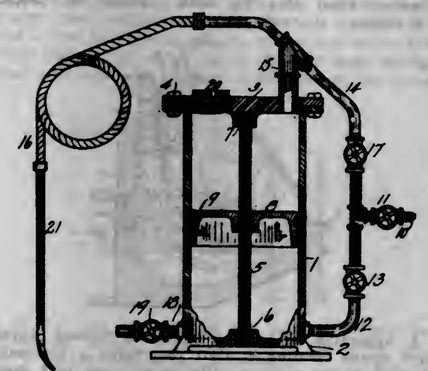


1. In a fastener of the character set forth, an elongated casing formed in two hollow sections, a hinge connecting the back portions of the sections, a catch connecting the front portions of the sections, said casing being provided in its ends with holes formed by cavities in the edges of the sections, one of the sections being provided with a plurality of longitudinally disposed seats.

1,578,941. TYPEWRITING MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed June 18, 1923. Serial No. 645,995. 26 Claims. (Cl. 197—126.)

1. In a typewriting machine, a revoluble platen, means for holding work-webs, composed of a succession of forms, and carbons interleaved therewith, for line-space feed with the platen, the platen being revoluble backwardly to release the carbons, a table having a horisontal portion at a substantially higher elevation than the platen, and having a portion which is arched downwardly toward the platen, said arched portion forming a carbon-stripping element, a carbon-carrier on the horizontal portion of the table, and means for shifting the carbon-carrier backward from the platen on such horisontal portion of the table while the forward end of the work-web is held against movement, to effect relative shifting of released carbons and web upon said stripping element.

1,578,942. GAS GENERATOR. DWIGHT L. WARRICK, York, Nebr. Filed July 9, 1925. Serial No. 42,464. 4 Claims. (Cl. 23—282.)

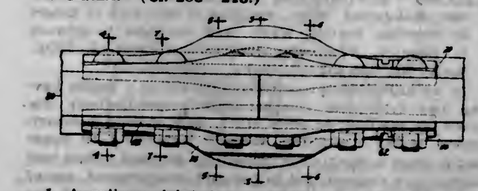


1. A gas generator comprising a liquid container, a reagent receptacle on the same level with the liquid container, a liquid supply container at a higher level than the liquid container, means communicating the bottom of the liquid supply container with the bottom of the liquid container, means communicating the tops of the liquid container and the reagent receptacle, a take off tube incorporated in said means, and means communicating intermediate portions of the liquid container and the reagent receptacle.

1,578,943. PROCESS OF MAKING NITRANISOLES. EARL H. WELTZ, Penns Grove, N. J., assignor to E. I. Du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 17, 1920. Serial No. 410,979. 3 Claims. (Cl. 260—150.)

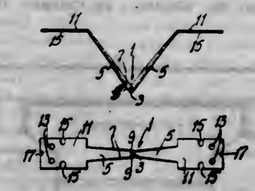
1. A process of making a nitranisole which comprises heating under pressure and at a temperature of from about 105 to 110° C. a nitrochlorobensene and methyl alcohol in the presence of water and an alkali-metal hydroxide.

1,578,944. SPRAYING DEVICE FOR PLASTIC MATERIAL. ROBERT M. WILKINSON, Philadelphia, Pa. Filed Mar. 24, 1923. Serial No. 627,431. 1 Claim. (Cl. 91—44.)



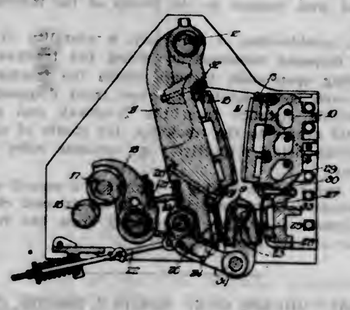
In a sprayer for plastic material, the combination of a casing having a material discharge at one end and an inlet for a pressure medium at the other end, a piston slidably mounted in said casing between said inlet and said outlet, a hose having communication with said outlet, a nozzle on said hose, means for respectively conducting a conveying pressure medium to said hose behind the material therein and to said inlet whereby said material has a mass movement to said outlet, leaves said outlet as a fractional part and is ejected through said hose in a continuous stream of particles, and separate means for independently controlling the pressure to said hose and to said inlet.

1,578,945. RADIUM NEEDLE STRUCTURE. SANFORD M. WITHERS, Denver, Colo. Filed Jan. 8, 1923. Serial No. 611,401. 2 Claims. (Cl. 174—177.)



1. A radium needle having a radium receiving cavity, a permanent closure for one end of said cavity, said closure being obtained as by soldering, and a point removably mounted adjacent said end.

1,578,946. FISHPLATE. CHARLES D. YOUNG, Philadelphia, Pa. Filed May 2, 1921. Serial No. 466,081. 7 Claims. (Cl. 238—248.)

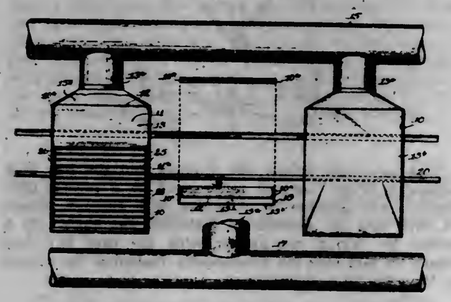


1. A railway joint bar comprising a web with head and base adapted to engage between those of the rail, said bar being of L beam configuration at the middle and of I beam configuration at the ends.

1,578,947. ANCHOR. WALTER L. ALBER, Chicago, Ill. Filed Apr. 24, 1925. Serial No. 25,498. 9 Claims. (Cl. 72—101.)

1. A one piece anchor for sleepers and the like comprising a bridge adapted to be sunk in a plastic composition and sidewardly extending ears thereon, means on said ears for detachably fastening the anchor to a device for laying the anchor with the ears flat, and means on said ears for permanently fastening the anchor to the sides of a sleeper.

1,578,948. CRUSHER. JOHAN R. BAKSTAD, Chicago, Ill. Filed Oct. 1, 1923. Serial No. 665,803. 14 Claims. (Cl. 83—53.)



1. In a crusher, the combination of a plurality of cooperating relatively movable jaw members between which stone is given a primary crushing in a single path, and means movable with one of said other jaw members and cooperating with said jaw members for giving said stone a secondary crushing in a plurality of paths.

1,578,949. CONNECTION FOR LUBRICATORS. FRANK S. BARNS, St. Louis, Mo. Filed July 24, 1924. Serial No. 727,864. 3 Claims. (Cl. 284—18.)

1. In a device of the class described, a two part coupling, one part being provided with a valve and having external locking lugs, the other part comprising a sleeve having internal lugs and a plug threaded therein, a movable end piece for said plug within said sleeve and cooperating with said first named part, said end piece being retained in position by said lugs, and a packing between said end piece and plug.

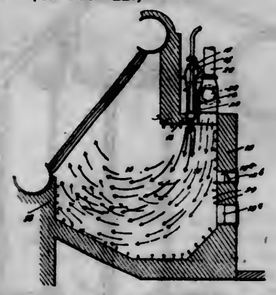
1,578,950. SPRAY BOOTH. HOWARD G. BARTLING, Chicago, Ill., assignor to Binks Spray Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 3, 1923. Serial No. 678,104. 21 Claims. (Cl. 91—60.)

2. In combination, a plurality of spray booths having open sides and open fronts, said booths being arranged side by side, alternate of said booths having their fronts reversed with respect to the fronts of the intermediate booths.

5. In combination, a trackway, a plurality of spray booths disposed consecutively along the trackway and all having open sides through which the trackway extends, each booth having an open front disposed at a considerable distance from the trackway and a back relatively nearer to the trackway, the fronts of consecutive booths being respectively at opposite sides of the trackway.

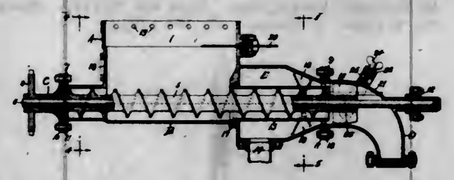
8. A spray booth having a top wall, a second wall located thereabove to form therewith an exhaust chamber, said chamber increasing in capacity from the front to the rear of said booth.

1,578,951. GREASE GUN. MARTIN C. BERSTED, Chicago, Ill. Filed Nov. 27, 1920. Serial No. 426,722. 4 Claims. (Cl. 184—105.)



1. A fitting for a grease gun comprising two pivotally connected members and having a passage extending therethrough, and means interposed between said members at their pivotal connection and projecting into said passage to normally close the passage but adapted to permit the flow of grease under pressure through the passage.

1,578,952. TRANSFER SHEET. CHARLES CAMPBELL, New York, N. Y. Filed Sept. 13, 1923. Serial No. 662,367. 4 Claims. (Cl. 91—68.)

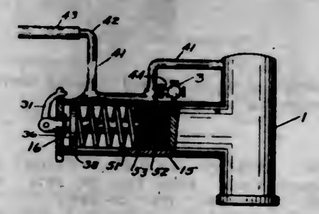


1. A transfer sheet comprising a textile fabric on one side of which paper fibres are deposited forming a closely matted absorbent and adherent coating thereon held only by adherence of the paper fibres to the said textile fabric, the said paper fibres being impregnated with a transfer pigment.

1,578,953. MEANS FOR THE BURNING OF PULVERIZED FUEL AND GAS. VIRGINIUS Z. CARACRISTI, Bronxville, N. Y., assignor to Locomotive Pulverized Fuel Company, New York, N. Y., a Corporation of Delaware. Filed May 23, 1919. Serial No. 299,327. 2 Claims. (Cl. 110—22.)

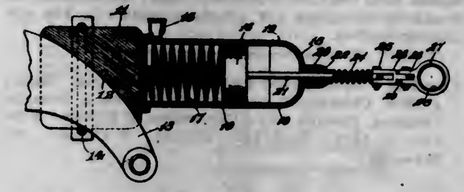
1. Apparatus for burning fuels in a furnace provided with means creating a draft comprising a combustion chamber having a waste outlet in an upper part, means for admitting pulverized coal in an upper part of the chamber to one side of the said outlet and adjacent a wall of the chamber and in a downward direction, and means for separately admitting a combustible gas into the combustion chamber in the upper part thereof in a downward direction into the space between the descending coal and such wall.

1,578,954. APPARATUS FOR HANDLING PULVERIZED FUEL. VIRGINIUS Z. CARACRISTI, Bronxville, N. Y., assignor to Locomotive Pulverized Fuel Company, a Corporation of Delaware. Filed Aug. 30, 1920. Serial No. 407,042. 4 Claims. (Cl. 302—50.)



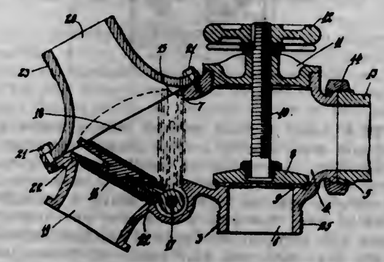
1. A device for handling pulverized fuel comprising, in combination, an upper casting having a fuel inlet, a base casting, means on the said castings where they may be fastened together to form a housing, a fuel outlet opening in the housing, a screw conveyor projecting through the outlet opening, an air admission chamber supplying air to the fuel at the outlet, and a separable member surrounding the conveyor where it extends through the air chamber, said member being held in place between the two castings.

1,578,955. ADJUSTABLE GAUGE. COY W. CHITTENDEN, Hazelwood, Wash., assignor of one-third to Robert R. Sterling, Seattle, Wash., and one-third to Edward L. Bonamy, Newcastle, Ind. Filed Sept. 2, 1924. Serial No. 735,301. 1 Claim. (Cl. 50—8.)



In an adjustable pressure control valve, a casing having two cylindrical compartments perpendicularly disposed in relation to each other, one of said compartments having a partition through it forming an upper and a lower compartment, oppositely disposed valves connected by a common rod in the said compartment, one of the said valves being in the said partition and the other in the end of the said lower compartment, the valve in the said partition being automatically closed and held in a closed position by the air pressure except

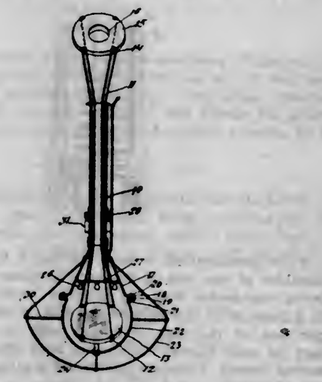
when it is opened by the valve of a tire, said perpendicularly disposed compartment having a valve seat in the inner end thereof, a slidable valve member, an elastic diaphragm acting against the said valve member, a combination of a large and small spring for normally holding said valve member against the seat, a screw in the center of the said springs, a disc on the said screw and bearing against the outer end of the said large spring, a graduated disc with notches in its edge at the outer



end of the said casing, said disc having an opening therethrough through which the end of the screw projects, a curved lever pivotally mounted in the end of the said screw and engaging the notches in the edge of the said disc to hold the said screw in different positions and by which the said screw may be rotated, a cut off valve in a supply line entering the said casing, and means for operating the said cut off valve by the said slidable valve member.

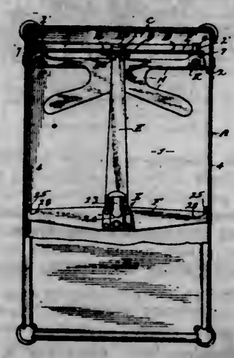
1,578,956. BUMPER SUPPORT FOR VEHICLES. HUGH S. CLARK, Elizabeth, N. J. Filed Oct. 31, 1925. Serial No. 66,036. 7 Claims. (Cl. 293—55.)

6. In a bumper mounting, a rod directed through a bearing for longitudinal movement, means yieldably urging the rod in one direction, a bumper bracket carried by and capable of limited longitudinal movement with relation to the rod and means yieldably resisting the longitudinal movement of the bracket.



1,578,957. CONNECTION FOR FIRE HOSE. RAY G. COATES, Pasadena, Calif. Filed June 29, 1925. Serial No. 40,278. 4 Claims. (Cl. 277—64.)

1. A connection of the character described comprising a chamber having two outlets and an inlet, a manually operated valve for one of said outlets, a passage forming an intake and an outlet, and an automatic valve, movable to close either the intake or the other outlet of the chamber.

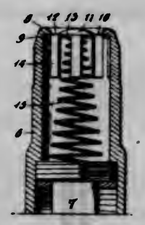


4. A connection of the character described comprising a chamber having an inlet adapted to be connected with a hydrant, said chamber having an outlet adapted to be connected with a pump intake and said chamber having a second outlet, a manually operated valve for the first mentioned outlet, a passage forming an intake adapted to be connected with the outlet of the pump and said passage forming an outlet adapted to be connected with a fire hose, valve seats at the inner end of the second intake and at the outer end of the second outlet, and a valve automatically closed onto the seat of the second outlet by a difference in pressures on opposite sides thereof when the manually operated valve is open and the pump is in operation and closed onto the seat of the intake when the manually operated valve is closed.

1,578,958. DEVICE FOR LOOKING UNDER WATER. JOSEPH DAOUST, Detroit, Mich. Filed May 21, 1925. Serial No. 31,772. 2 Claims. (Cl. 88—1.)

1. In a device of the class described comprising a pipe, an encasement secured to one end of said pipe, wires extending through and projecting from both ends of the pipe, a mirror, means for pivoting said mirror in the bottom of said encasement, a disk secured to one end of said tires and said mirror secured to the other ends thereof so that movement of the disk will cause a similar movement of the mirror and guard wires placed around said encasement.

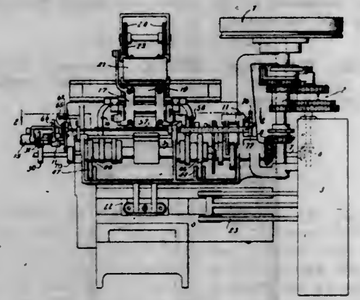
1,578,959. WARDROBE TRUNK. BENJAMIN DAVIDSON, Los Angeles, Calif. Filed May 31, 1924. Serial No. 717,163. 6 Claims. (Cl. 190—13.)



1. In a wardrobe trunk having rods held in the upper end thereof, and hangers slidably disposed on said rods for supporting garments, means overlying said hangers

and including members disposed in front of said garments and hangers and substantially below said hangers, adapted to be locked together for preventing unauthorized access to said garments.

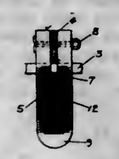
1,578,960. STENCIL SHEET AND COATING SOLUTION THEREFOR. ALEX BROOKING DAVIS, Cincinnati, Ohio, assignor to A. B. Dick Company, Chicago, Ill., a Corporation of Illinois. Filed July 3, 1925. Serial No. 41,436. 15 Claims. (Cl. 41—38.6.)



1. A type-impressible stencil-sheet consisting of a porous base having a coating including a starch ester.

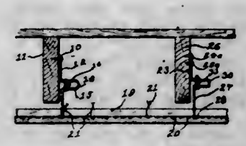
1,578,961. TIRE-VALVE CLOSURE. LINCOLN S. DOWNS East Cleveland, Ohio. Filed Jan. 14, 1925. Serial No. 2,367. 2 Claims. (Cl. 152—12.)

1. In combination, a body having a bore, annular flat shoulder at one end of the bore, a closure disk, said disk being engageable with the shoulder, radial fingers on and in a plane with the body of the disk to space intermediate portions of the disk from the wall of the bore, guide legs on said fingers engageable with the bore wall, and spring means normally yieldably seating the disk upon the shoulder.



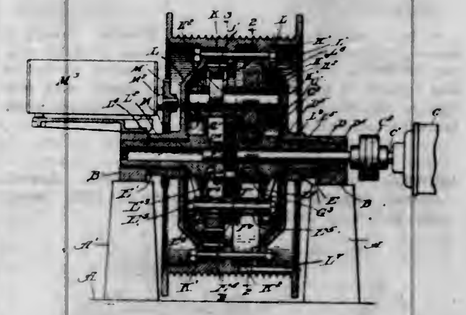
1,578,962. PRINTING MACHINE. JOSEPH S. DUNCAN, Chicago, Ill., assignor to Addressograph Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 19, 1924. Serial No. 707,651. 12 Claims. (Cl. 101—47.)

1. In a printing machine, a printing device, means to take a plurality of impressions therefrom, and means to alter said first named means in order to take a single impression, said altering means being controlled by said printing device.



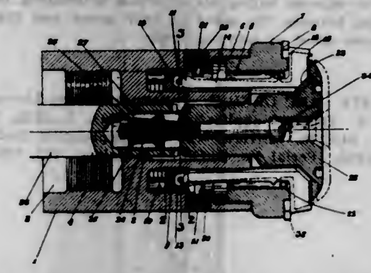
1,578,963. BOLT CONSTRUCTION. WILLIAM A. DUNLAP, Pittsburgh, Pa. Filed Aug. 8, 1924. Serial No. 730,953. 1 Claim. (Cl. 85—3.)

A bolt of the kind described formed of a sheet metal blank bent upon itself at the middle to form an integral rounded-end cylinder with the edges of the blank in contact beyond the rounded end and provided with threads



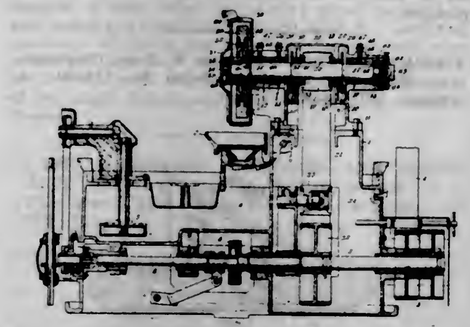
for a portion of its length and opposite clearance slots for a supporting bar at its other end.

1,578,964. CEILING HANGER. PHILIP DUPHINEY, Waterbury, Conn. Filed July 29, 1925. Serial No. 46,789. 11 Claims. (Cl. 72—118.)



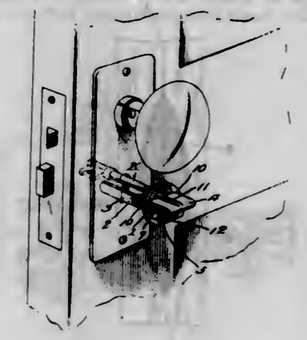
1. In a ceiling hanger, a portion adapted to be attached to a floor joist, a portion adapted to support a channel iron, an intermediate resilient section connecting said portions, said section being yieldable to sudden shocks from the floor above, and means for transmitting tensile stresses from the attaching portion to the supporting portion.

1,578,965. AUTOMATIC REVERSIBLE HOIST. HENRY J. ECK, Chicago, Ill., assignor to Roberts & Schaefer Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 3, 1924. Serial No. 753,583. 5 Claims. (Cl. 254—186.)



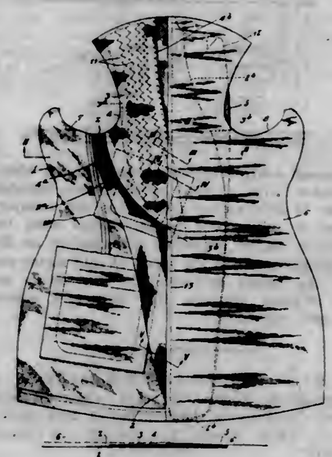
1. In a hoist, a drum, a fixed bearing sleeve about which said drum rotates, a drive shaft penetrating said bearing sleeve, and means for rotating it, and a driving connection between said drive shaft and said drum, and comprising a gear on said drive shaft, a plurality of pinions in mesh therewith, a ring gear surrounding and in mesh with said pinions, a gear of substantially smaller diameter than said ring gear connected thereto, a plurality of pinions in mesh therewith, eccentrics associated with each of said pinions, a gyrating gear having rotary bearing relation with said eccentrics, an internal ring gear surrounding said gyrating gear and in mesh with it and of greater diameter than said gear, said ring gear being connected to the drum.

1,578,966. CHUCK. LOUIS A. EDELMANN, St. Louis, Mo., assignor to Unico Motor Products Corporation, St. Louis, Mo., a Corporation of Missouri. Filed Oct. 4, 1922. Serial No. 592,300. 5 Claims. (Cl. 279—108.)



1. A chuck including, in combination, an annular work-engaging body, a plurality of swingable jaws, each jaw comprising a shank and an outwardly projecting head having opposite faces rearwardly and forwardly presented relatively to the body, said jaws being disposed normally in a yieldingly contracted annular series with their heads presented forwardly of the body and being slidable relatively to and swingable towards the body, and means adapted for engagement with the jaws at the forwardly presented faces of their heads for slidably and radially expanding the jaws to engage the work between the body and the rearwardly presented faces of their heads.

1,578,967. SPLASH-OILED HALF BEARING FOR GRINDERS. SOL EINSTEIN, Cincinnati, Ohio, assignor, by mesne assignments, to The Cincinnati Milling Machine Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 5, 1923. Serial No. 622,866. 1 Claim. (Cl. 308—127.)

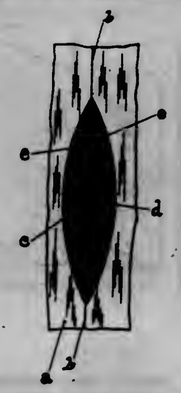


In a grinding machine, in combination a support; two bearings carried by said support; a shaft journaled in said two bearings; two lubricant wells formed wholly within and integral with said support each of said wells being located wholly at one side of each of said bearings; a lubricant slinger disposed in each well and contacting with the lubricant therein, said lubricant slinger being mounted on and rotated by said shaft; a combined receiving trough and lubricant conveyor operatively connected with each well, each trough having an open end secured within a closed bore in said support and a closed end adjacent said lubricant slinger whereby the trough receives lubricant cast off by its slinger and conveys it laterally away from said slinger and over its adjacent bearing; a tube extending downwardly from said closed bore towards each of said bearings and adapted to deliver lubricant to said bearings said bearings each being provided with a duct to return the lubricant back to the well from whence it came.

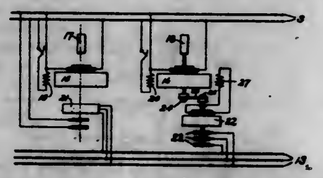
1,578,968. KEY HOLDER. SPENCER FANNIN, Flint, Mich. Filed Feb. 1, 1923. Serial No. 616,417. 7 Claims. (Cl. 70—65.)

1. A key-holder made of two members connected together, one having means for receiving a key and holding it during the rotation thereof, and being rotatably connected with the other member and means for locking said key-receiving member against turning relative to the other.

1,578,969. GARMENT AND METHOD OF MAKING IT. RICHARD A. FEISS, Cleveland, Ohio, assignor to The Joseph & Feiss Co., Cleveland, Ohio. Filed Nov. 13, 1922. Serial No. 600,529. 1 Claim. (Cl. 2—93.)



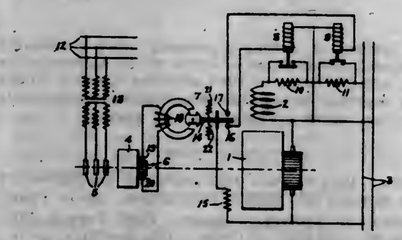
The method of making a garment using a plurality of laminated materials one of which carries an interjacent pocket, which consists in blind stitching together certain of said materials on one side of said pocket continuously along a line which passes across said pocket.



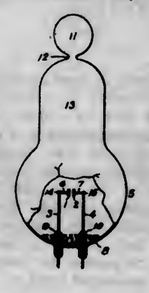
1,578,970. MEANS FOR PREVENTING BAGGING AT THE KNEES OF MEN'S TROUSERS. FRITZ FESER, Frankfort-on-the-Main, Germany. Filed June 5, 1922. Serial No. 565,952. 1 Claim. (Cl. 2—231.)

Man's trousers with pieces or patches of web-like fabric, stitched inside the trouser leg at the knee of the trouser to prevent the bagging at the knees of the

latter, said pieces or patches being extended diagonally to the cross of the threads up to the limit of their capacity in this direction and being elastic only transversely and connected immovably with the trouser material by stitches along the edges and the crease, thereby preventing the stretching or bagging of the latter.

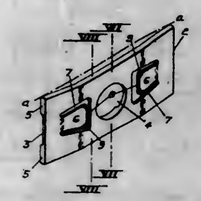


1,578,971. SPEED-CONTROL SYSTEM. LIONEL FLEISCHMANN, Berlin, Germany, assignor to General Electric Company, a Corporation of New York. Filed Aug. 11, 1924. Serial No. 731,272. 5 Claims. (Cl. 172—243.)



1. A speed control system comprising an electric motor provided with a field winding for supplying the excitation of said motor and means for regulating the excitation of said motor in accordance with its speed comprising a rotary converter arranged to be driven at a speed proportional to the speed of said motor connected to vary the motor excitation in accordance with the angular relation between the field and commutating axis of said converter.

1,578,972. SPEED-CONTROL SYSTEM. LIONEL FLEISCHMANN, Berlin, Germany, assignor to General Electric Company, a Corporation of New York. Filed Aug. 11, 1924. Serial No. 731,273. 2 Claims. (Cl. 171—312.)

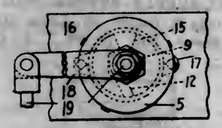


1. A speed control system comprising a motor provided with speed controlling means, a current directional relay for controlling the speed controlling means of said motor, a source of alternating current supply, and a rotatory converter supplied from said alternating current source and arranged to be driven at a speed proportional to the speed of said motor for supplying to said relay a current having its direction determined by the relation between the speed of said motor and the synchronous speed of said converter.

1,578,973. ARC DEVICE. JONATHAN FORCE, Livingston, N. J. Original application filed Mar. 1, 1922, Serial No. 540,276. Divided and this application filed Oct. 5, 1923. Serial No. 666,831. 6 Claims. (Cl. 176—1.)

1. An electric discharge device comprising a container, refractory arc-sustaining electrodes therein operable at incandescence, a liquid in said container adapted to be actively vaporized during the operation of an arc between said electrodes, and means for regulating the vapor pressure in said container to prevent substantial disintegration or accretion of metal on said electrodes during operation.

1,578,974. NUT LOCK. WILLIAM W. FORD, Pittsburgh, Pa. Filed May 20, 1924. Serial No. 714,551. 6 Claims. (Cl. 151—50.)



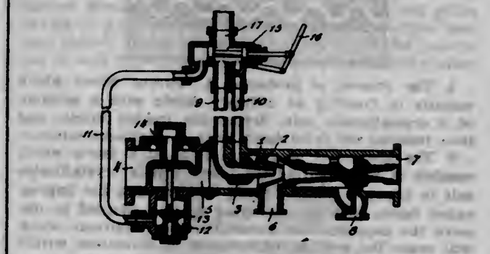
1. A nut lock consisting of a washer plate having a middle longitudinal channel, providing a continuous thin middle portion, a bolt hole, and an integral resilient locking tongue extending inwardly towards the bolt hole and provided with rounded corners, the fibre or grain of the plate extending lengthwise of the plate and said tongue.

1,578,975. DISK-WHEEL. GEORGE H. FORSYTH, Chicago, Ill., assignor to Motor Wheel Corporation, Lansing, Mich., a Corporation of Michigan. Filed Mar. 24, 1922. Serial No. 546,272. 7 Claims. (Cl. 301—63.)

1. In a disk wheel, the combination of a hub, a rim adapted to carry a pneumatic tire with a substantially straight valve stem, and a dished disk connecting the hub and rim, the disk uniformly dished in its body portion as viewed concentrically of the hub and shaped in its outer portion to form a seat for one side of the rim and to accommodate the valve stem wholly in front thereof.

1,578,976. SHOCK ABSORBER. ARCHIE FOWELS, Dayton, Ohio. Filed Mar. 28, 1925. Serial No. 18,984. 10 Claims. (Cl. 188—89.)

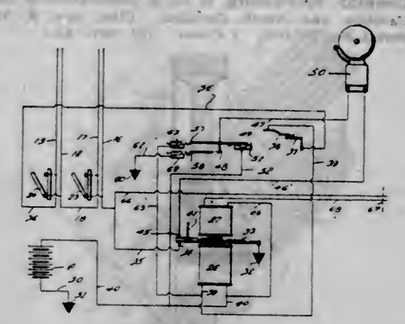
1. In a shock absorber, a cylindrical casing, a shaft mounted in said casing, and a wing piston mounted in said casing and connected with said shaft for oscillatory movement therewith, the connection between said wing piston and said shaft being such that the initial movement of said shaft will move said piston in the direction of its length before oscillatory movement is imparted thereto.



1,578,977. COMBINED CONDENSER AND RESISTANCE UNIT. WILLIAM H. FRASER, Newark, N. J. Filed Mar. 6, 1925. Serial No. 13,469. 1 Claim. (Cl. 250—16.)

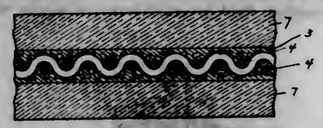
A condenser consisting of two helical windings of wire capacitatively disposed relative to each other, a tube of non-conducting material forming a support for the windings, a resistor element mounted in the tube, and closures for the ends of the tube forming contact terminals for the condensers and the resistor element.

1,578,978. STEAM INJECTOR OPERATING WITH LIVE STEAM AND EXHAUST STEAM. LOUIS FRIEDMANN and HANS DEUTSCH, Vienna, Austria. Filed Dec. 5, 1924. Serial No. 754,195. 18 Claims. (Cl. 162—1.)



1. The combination with an exhaust steam injector having connected therewith, a conduit leading to the exhaust steam line of an engine, a second conduit for supplying auxiliary live steam to said injector, and a third conduit for supplying supplementary live steam to said injector, of a valve casing to which said second and third conduits are connected, means to supply live steam to said casing, a valve freely mounted in said casing, normally closing, and adapted to be moved by the pressure of the live steam in said casing to open said second conduit, fluid pressure actuated means within said casing, and a pipe connecting said fluid pressure means with the main steam line of the engine, said fluid pressure means being constructed and arranged to contact with said freely mounted valve and prevent it from opening said second conduit when said pipe contains steam under pressure.

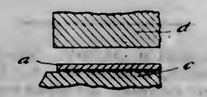
1,578,979. ALUMINUM ALLOY. TRUMAN S. FULLER and DAVID BASCH, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Continuation of application filed Dec. 13, 1923, Serial No. 680,516. This application filed Dec. 18, 1924. Serial No. 756,822. 2 Claims. (Cl. 75—1.)



1. An alloy consisting essentially of aluminum, zinc and magnesium, the zinc content of said alloy being within the limits of about three to eight per cent and the magnesium content being within the limits of about 0.25 to 1.5 per cent.

1,578,980. BURGLAR-ALARM SYSTEM. GOTTFRIED F. GASSER, Atlanta, Ga., assignor to Annie Gasser, Atlanta, Ga. Filed Dec. 15, 1922. Serial No. 607,049. 2 Claims. (Cl. 177—314.)

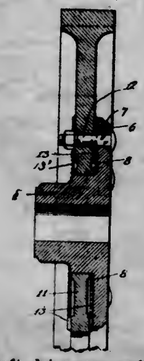
1. In an alarm, a normally closed circuit and a normally open alarm circuit, a source of power, a switch, means whereby said switch may be moved first to close said alarm circuit to test the strength of the source of power, then moved to shunt the alarm circuit to render the alarm circuit inoperative and finally to break the shunt connection, means including a relay connected with the switch and source of power operable to open the alarm circuit when said shunt connection is made and to close the normally closed circuit.



1,578,981. METHOD OF MAKING A LUSTROUS FABRIC. ALFRED GELBERT, Chicago, Ill. Filed Apr. 29, 1921, Serial No. 465,585. Renewed Jan. 9, 1926. 6 Claims. (Cl. 91—68.)

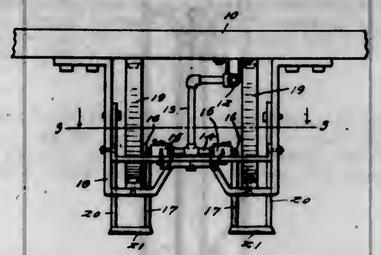
1. The process of producing a lustrous fabric which consists in treating an ordinary fabric with a solution of a crystallizable salt, drying the treated fabric, and then treating the dried fabric with a gelatinous solution.

6. The process of producing lustre on a fabric which consists in impregnating the fabric with a crystallizable salt in a non-crystalline form, and treating the impregnated fabric with an air-drying coating adapted to dissolve the impregnating material under conditions which will cause the said solved material to crystallize within the said coating during the drying of the latter.



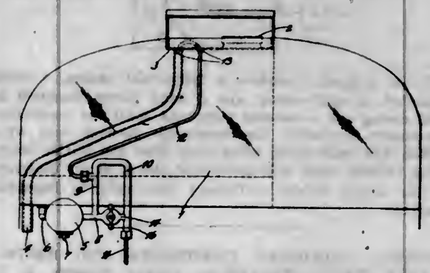
1,578,982. DECORATIVE MATERIAL FOR ORNAMENTAL PANELS, PLAQUES, OR THE LIKE. LEONARD JAMES GLOSTER, Birmingham, England. Filed June 15, 1925. Serial No. 37,018. 8 Claims. (Cl. 41—19.)

1. The manufacture of a decorative material by impressing a pattern upon a surface of translucent and flexible material and applying to the impressed surface a thin coating of opaque material.



8. The method of manufacturing a decorative tube of translucent and flexible material by impressing a pattern on the inner surface thereof by means of an expanding member, and by coating the impressed inner surface of the tube with opaque material.

1,578,983. LOOM GEAR. ROBERT W. GOSSETT, Spartanburg, S. C., assignor to Manufacturers' Equipment Company, Spartanburg, S. C., a Corporation of South Carolina and North Carolina. Filed Apr. 8, 1924. Serial No. 705,069. 1 Claim. (Cl. 287—52.)

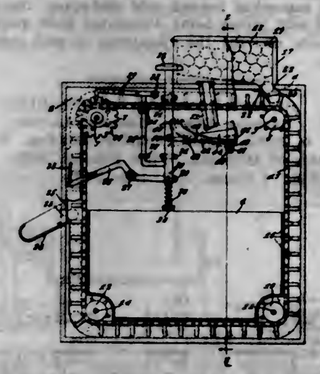


A loom cam-shaft drive-gear embodying a hub-member adapted to be keyed to the cam-shaft and having a radial flange provided with arcuate slots and also with a series of radial serrations on its inner face, a gear member consisting of a gear rim and a central disk having a central hole for fitting over the hub-member and with an annular series of radial serrations adapted to engage the serrations on the hub flange, and clamp-bolts.

1,578,984. AUTOMATIC TRAIN STOP. JOHN W. GOSSETT, Richmond, Ind. Filed Oct. 14, 1924. Serial No. 743,624. 3 Claims. (Cl. 246—171.)

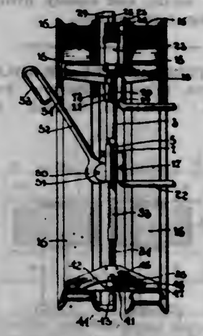
1. Means for automatically applying the brake of an air brake system, the same comprising a branch pipe connected with the train line, a cross pipe attached to the branch pipe and provided at opposite ends with release valves, the stems of which have lateral extensions, vertically slidable trips normally disengaged from said extensions, said extensions being in the path of upward movement of the stems, vertically slidable guides having a limited movement, cross pieces connecting the lower ends of the respective trips and guides and adapted to make contact with a track rail in the event of derailment, and a mounting for the trip and guides.

1,578,985. FUEL-SUPPLY SYSTEM FOR MOTOR VEHICLES. OLIVER R. GRASS, St. Louis, Mo. Filed Nov. 30, 1925. Serial No. 72,176. 2 Claims. (Cl. 158—165.)



1. The combination with a liquid tank having an inlet opening through the top, a pan arranged to receive overflow from said opening and having its bottom below the top of said opening, a pipe opening downwardly from the bottom of said pan, and a chamber below and opening into the bottom of the tank, of a pipe opening laterally from said chamber below the bottom of the tank, a valve for opening and closing said pipe, an inverted U-shaped pipe having its arms opening into said second pipe at the opposite sides of said valve, and having its upper portion substantially above the bottom of the tank, and a pipe extending upwardly from said U-shaped pipe and thence downwardly and opening into said first-named pipe and being entirely below the upper portion of said inlet opening.

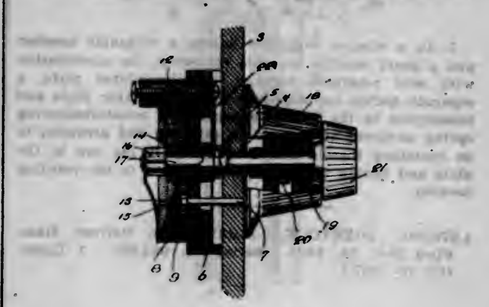
1,578,986. VENDING MACHINE. CHARLES GREEN GRAVES, Cedar Grove, La. Filed Dec. 12, 1923. Serial No. 680,205. 2 Claims. (Cl. 211—8.)



1. In a device of the class described, a casing, a door mounted for right-line sliding movement on the casing, a drive shaft journaled on the casing, an endless conveyor driven by the shaft and so positioned as to deliver an article at the door, a lever fulcrumed intermediate its ends on the casing, one end of the lever being directly connected to the door, a plunger slidable in the casing

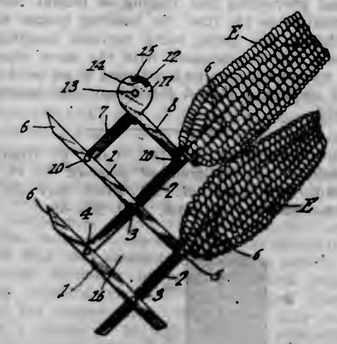
and disposed about parallel to the line of reciprocation of the door, the other end of the lever being directly connected to the plunger, the plunger being movable in one direction to open the door, a stop wheel on the shaft, a pawl pivoted to the casing and coacting with the stop wheel to hold the shaft against rotation when the

door is opened, the plunger comprising a part which engages the pawl to disengage the pawl from the stop wheel when the plunger is moved in an opposite direction, and spring means for moving the plunger in the last-specified direction, thereby to close the door and disengage the pawl from the wheel.



1,578,987. SPARE-TIRE CARRYING AND RIM-REMOVING DEVICE. FRANKLIN A. HAMILTON, Three Forks, Mont. Filed July 22, 1924. Serial No. 727,511. 1 Claim. (Cl. 224—29.)

A tire carrier of the character described, comprising a plurality of heads, spaced inner and outer cradles supported across said heads, one of the heads being adjustable relative to the other, an arched bracket secured to a pair of the heads and located medially relative to the inner and outer cradles thereon, an eye on the remaining head medially thereof, adjustable and rotatable hooks thereof, adjustable and rotatable hooks carried by the bracket and eye, and adapted to be positioned alternately with respect to the inner and outer cradles, to engage rims thereon, and means for moving the adjustable head.

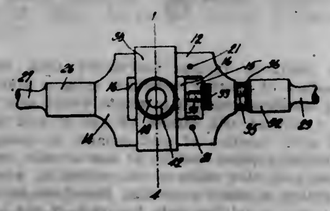


1,578,988. MULTIPLE-PURPOSE RHEOSTAT. CHARLES HANDY, New York, N. Y., assignor to Amsco Products, Inc., New York, N. Y., a Corporation of New York. Filed July 11, 1924. Serial No. 725,861. 3 Claims. (Cl. 201—55.)

2. A multiple purpose rheostat comprising a body member of insulating material having a bearing opening therethrough from its front to its rear surface and having an annular groove formed in its rear surface spaced concentrically from said bearing opening, a plurality of resistance strips arranged within said groove extending longitudinally along the groove and hence concentrically about said bearing opening, retaining means also within said groove arranged between said strips and serving to hold said strips spaced apart and to retain said strips against displacement from the groove, each of said strips having a longitudinally extending exposed surface portion thereof facing rearwardly outwardly of the groove, one of said resistance strips having its mentioned surface

arranged relatively further rearwardly than the mentioned surface of another resistance strip, a plurality of operating members mounted to rotate within said bearing opening, a contact arm carried by one of said members arranged upon rotation of said member to sweep along the mentioned exposed surface of one of said resistance strips, and a further contact arm carried by another of said operating members projecting therefrom across said last mentioned resistance strip free thereof and arranged thereby to sweep along the mentioned exposed surface which is disposed rearwardly of the exposed surface of the last mentioned strip.

1,578,989. DEVICE FOR DRYING CORN. HERSCHEL V. HARRELD, Hedrick, Iowa. Filed Jan. 20, 1925. Serial No. 3,611. 1 Claim. (Cl. 34—26.)

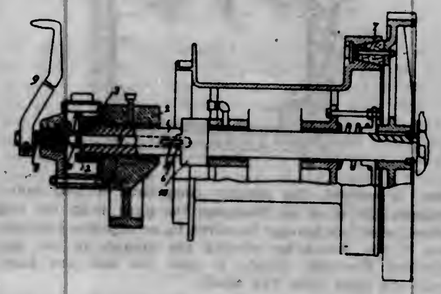


In a corn drier, a lazy-tong construction comprising a plurality of pivotally connected bars, said bars having outer pointed extremities extended beyond the pivot points of the adjacent bars, the adjacent bars providing stops for the corn positioned on the pointed extremities, and a stop to prevent movement of the bars past their operative position in their operative positions.

1,578,990. WINDOW-REGULATOR SPRING ASSEMBLY. ERNEST E. HEINTZ, Detroit, Mich., assignor to Tarnstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 5, 1923. Serial No. 672,791. 9 Claims. (Cl. 185—45.)

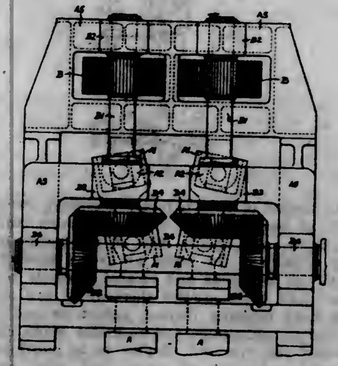
1. In a window regulator having a rotatable member and a draft member movable thereover, the combination with said rotatable member, of a regulator plate, a separate spring cup anchored to the regulator plate and telescoping in the rotatable member, a counterbalancing spring anchored at one end in said cup and arranged to be contained therein before assembly of the cup in the plate and having the other end anchored to the rotating member.

1,578,991. DIESTOCK. JAMES HIRST, Melrose, Mass. Filed Feb. 19, 1924. Serial No. 693,883. 1 Claim. (Cl. 10—127.)



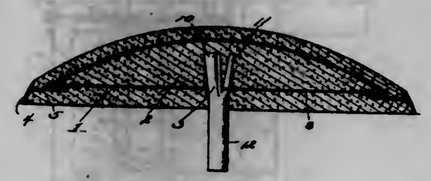
A die stock comprising a body, two dies arranged within an opening in the body, means permitting relative adjustment of the dies to vary the width of the space between them, and a tubular guide for the article being threaded supported on the body and projecting laterally from one face thereof, the bore of said guide including a section, extending outward from the end adjacent the dies and having throughout its length a uniform diameter corresponding to that of the article to be threaded, providing means for engaging a considerable length of said article and preventing any tipping or lateral movement thereof relative to the dies, for insuring proper starting of the thread, the guide being movable longitudinally of the body out of alignment with the space separating the dies, whereby it may be positioned so as not to interfere with cutting a thread throughout the length of a bolt or rod.

1,578,992. WEATHER STRIP. CARL F. HOFFBAUER, Montclair, N. J., assignor of one-half to Ib Nyboe Pasgaard, New York, N. Y. Filed May 29, 1925. Serial No. 33,642. 1 Claim. (Cl. 20—69.)



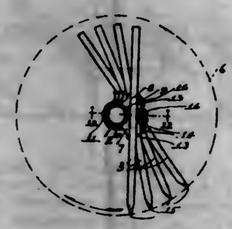
The herein described composite weather strip comprising a supporting member, a pair of resilient strips extending along said member upon opposite sides thereof and secured to said member, the free edges of said strips being beaded and spaced from said member to contact a second member movable relatively thereto, one of said strips extending from an end of said supporting member past the mid-point thereof, while the other strip extends from an opposite end of said member and terminates at a point somewhat beyond said mid-point, the beaded portions of said strips being associated with cushioning means therein whereby the vibrations of said strips are eliminated.

1,578,993. CLUTCH-CONTROL MECHANISM FOR HOISTS. HERBERT GLENN HOLMES, Lansing, Mich., assignor to Novo Engine Company, Lansing, Mich., a Corporation of Michigan. Filed Feb. 28, 1924. Serial No. 695,645. 1 Claim. (Cl. 192—97.)



The combination in a hoist, with a hoisting drum, a clutch, a push rod, a thrust pin for bringing said clutch into action and actuating means in operating relationship to said thrust pin, of a soft metal thrust block between said means and thrust pin, and a removable collar mounted on said means and closely fitting said thrust block and retaining it in position.

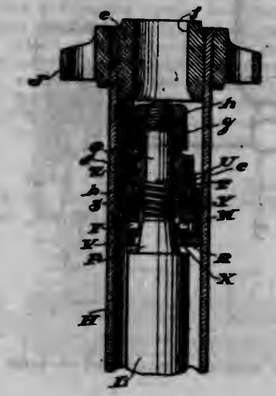
1,578,994. UNIVERSAL PLATE-ROLLING MILL. THOMAS EDMUND HOLMES, Glasgow, Scotland. Filed Mar. 21, 1924. Serial No. 700,852. 1 Claim. (Cl. 80—54.)



In a universal plate rolling mill including a horizontal roll shaft, laterally adjustable vertical rolls, vertical roll shafts, one shaft for each roll, above said rolls, said vertical shafts rotatable in fixed bearings, universal couplings detachably connecting the lower ends of said vertical shafts to the upper ends of said rolls, pinions on said vertical shafts, pinions meshing with the first mentioned pinions, verical pinion shafts carrying the second mentioned pinions, bevel wheels on said pinion shafts, each bevel pinion located at a level intermediate the upper end of the corresponding roll and the lower end of its roll shaft, and bevel wheels facing one another on said horizontal roll shaft meshing with said first mentioned bevel wheels.

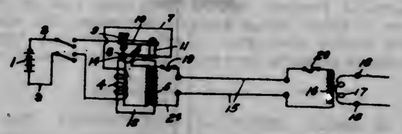
1,578,995. TRAFFIC MARKER. PAUL R. HOSTETTER, York, Pa. Filed Oct. 2, 1924. Serial No. 741,266. 9 Claims. (Cl. 94—1.5.)

1. A traffic marker formed of refractory substance having the top and base faces asymmetrical, and a metallic reinforcement embedded therein comprising an annular nosing, and reinforcing elements secured to said nosing and bridging the space thereacross, said elements being spaced apart in the direction of thickness of said marker some of said elements being arranged to conform substantially to the shape of the base and some being arranged to conform substantially to the shape of the top.



1,578,996. ROAD-MAKING MACHINE. HARRY A. HOXIE, Grand Rapids, Mich. Filed Sept. 6, 1923. Serial No. 661,167. 2 Claims. (Cl. 262—19.)

1. In a machine of the character described: a vehicle; a horizontally disposed shaft rotatably mounted thereon; a pick bar carried by the shaft extending transversely thereof; a pick bar-carrying member having a face and an oppositely disposed recess in which the shaft is received; a yoke having a bight in which the shaft is received and parallelly disposed threaded arms; a plate having openings therethrough receiving said arms; nuts on the threaded arms for clamping the pick bar in longitudinal adjustment between said plate and the face of said member, and said member and yoke in longitudinal and turned adjustment on the shaft.

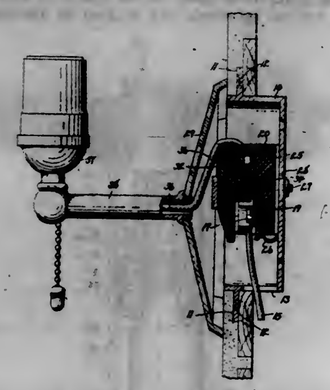


1,578,997. AIR-FEED BRAKE. GEORGE W. HULSEBUSH, Stewartsville, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 16, 1925. Serial No. 56,648. 2 Claims. (Cl. 121—9.)

1. In an air feed brake for a fluid actuated rock drill, the combination of a feeding cylinder with a fluid actuated piston, a rod for said piston and slidable longitudinally with respect thereto, a conical extension on said rod, frictional members in said piston, and radially extending plungers slidable in the piston to abut at one end the conical extension and to abut at the other end

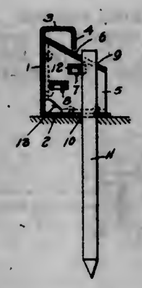
the frictional members to force said members outwardly against the cylinder and prevent recoil of the cylinder during the operation of the drill when pressure fluid acts against the piston.

1,578,998. SHOT-FIRING SYSTEM. JOHN J. JAKOSKY, Pittsburgh, Pa., assignor of one-third to Edward Steidle, Pittsburgh, Pa. Filed Mar. 7, 1925. Serial No. 13,745. 5 Claims. (Cl. 102—10.)



5. A shot firing system, comprising a current generating unit consisting of a battery, a battery circuit, means for interrupting the flow of current through said circuit at a rate much higher than the frequency of commercial alternating currents, and a transformer having a primary in said circuit for inducing in its secondary a high voltage low amperage alternating current of the same frequency as the rate of interruption of said battery circuit; a second transformer tuned to transform said generated alternating current to one of low voltage and high amperage, and long lead conductors closing a circuit between said second secondary of said first-named transformer and the primary of said second-named transformer whereby the second-named transformer may be placed close to a charge to be fired and said generating unit at a safe distance from it.

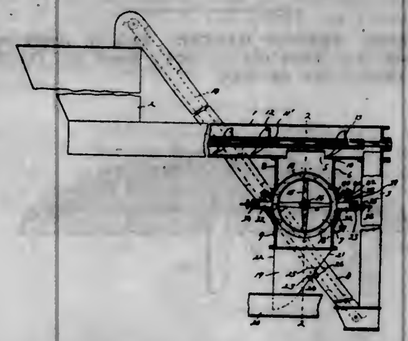
1,578,999. OUTLET BOX AND PLATE THEREFOR. GUSTAVE E. KASCHUB, Meriden, Conn. Filed Mar. 16, 1923. Serial No. 625,482. 4 Claims. (Cl. 173—330.)



1. The combination with an outlet box formed on opposite sides with integral, inclined guideways, and

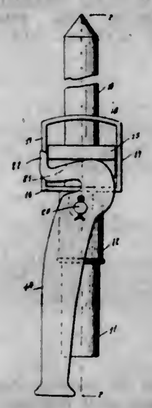
with sockets at the lower ends thereof, of a contact-block arranged between the said guideways, and a face-plate

provided with inclined pins adapted to enter the said sockets.



1,579,000. ROAD-BUILDING FORM. BERNARD H. KRESTING, Ben Avon, and VERE B. EDWARDS, Coraopolis, Pa., assignors to The Dravo Contracting Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 7, 1925. Serial No. 28,626. 7 Claims. (Cl. 25—118.)

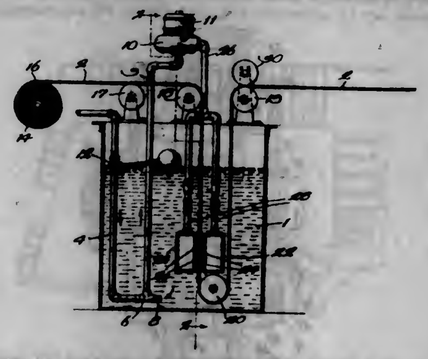
1. A form for road building including a channel-shaped member adapted to stand with its medial web presented in vertical position to the work, said channel-shaped member carrying within the channel a stake-box with inclined and ported upper wall, and a wedge borne by and movable in its bearing in the stake-box, arranged opposite the lower rim of the port in the said upper wall and adapted to cooperate with the opposite rim of the port in gripping an introduced stake.



1,579,001. ROTARY FEEDER. GEORGE F. KEY, Detroit, Mich. Filed June 6, 1923. Serial No. 643,663. 11 Claims. (Cl. 198—85.)

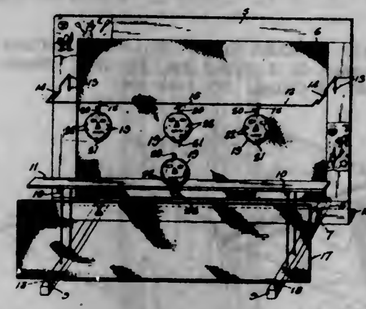
1. In an apparatus of the class described, the combination with a storage tank containing comminuted material, of a tube leading from the tank and having a takeoff opening therein, a casing secured to the tube about the opening, a member communicating with said tube, a conveyor in the tube having blades upon one side of the opening for moving the material from the tank to the casing, a delivery conduit, means in the casing for transferring the material in measured quantities from the casing to the conduit, said conveyor also having one or more blades upon the opposite

side of the opening in said tube for moving any overflow from the casing into the member aforesaid, and means for returning to the tank the material received by said member.



1,579,002. VISE-POST LOCK. ARTHUR A. KOCH, Albert Lea, Minn. Filed Dec. 27, 1924. Serial No. 758,480. 2 Claims. (Cl. 81—41.)

1. A vise post operating and locking means, the same comprising a sleeve adapted to be fitted to a section of the post, a post grip and an operating cam lever mounted upon said sleeve on a transverse axis and adapted to coact with the post grip, said lever having a stop to engage the post grip and prevent overthrowing of the lever when operating the post grip.



1,579,003. METHOD OF AND APPARATUS FOR IMPREGNATING FELT AND THE LIKE. HENRY C. KOCH, Chicago, Ill. Filed Jan. 7, 1925. Serial No. 982. 3 Claims. (Cl. 91—46.)

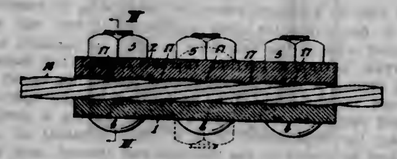
1. Apparatus for impregnating a strip of fabric with a liquid, the apparatus having a tank for containing the liquid, guides for leading the strip down into and up out of the shank, a jetting unit located within the tank and facing the strip, the surface of the unit facing the strip being foraminated, a pump for forcing the liquid through the foraminca and against the strip, and

an intake from the pump below the level of the liquid whereby the liquid is circulated by means of the same mechanism which forces the liquid into the strip.

1,579,004. GAME. ALEXANDER F. KOLINSKI, Milwaukee, Wis. Filed Mar. 2, 1925. Serial No. 12,578. 9 Claims. (Cl. 273—102.)

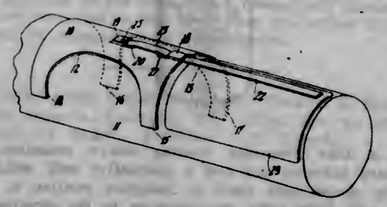
1. In a game, the combination of a rack member having a depending attaching member, a base portion, and a magnet secured to the rack member, and a target arranged for engagement with the attaching member, the base portion, and the magnet.

1,579,005. WIRE CLAMP. PALLED BERTRAM KROUT, Narberth, Pa. Filed Jan. 26, 1925. Serial No. 4,967. 21 Claims. (Cl. 24—135.)



1. In a wire cable clamp; the combination with a metal block having a groove extending longitudinally therein, of different widths in different regions thereof; such widths respectively corresponding with the exterior diameter of a cable and with the diameter of a core congeries of wires in said cable; said groove having flutes in the bottom thereof corresponding in spiral curvature with the pitch and lay of the wires in the cable; said block having pairs of bolt holes extending therethrough at intervals in the length of said groove bearing an aliquot relation to the spiral pitch of said wires and

flutes, and in planes where two flutes are in symmetrical relation with said groove at the bottom thereof; of U-bolts fitted to said holes, having bights extending transversely, obliquely, across said groove, at respective regions of minimum diameter of the cable positioned therein by said flutes, and having their free ends screw threaded; and nuts respectively engaged with the ends of said bolts and bearing against said block; said bolts having their ends diverged from their bights, whereby said nuts extend in planes transverse to each other, and said block having faces at right angles to the axes of said bolt ends, for seats for said nuts; whereby a cable may be clamped by bolted engagement with both its exterior periphery and the periphery of its core wires



---

1,579,006. WIRE CLAMP. PALLED BERTRAM KROUT, Narberth, Pa. Filed Nov. 2, 1925. Serial No. 66,288. 4 Claims. (Cl. 24—135.)

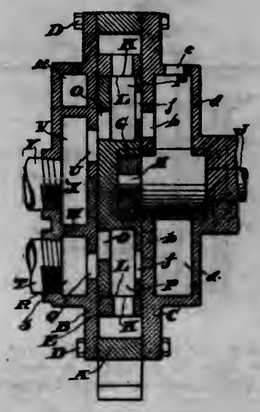
1. In a wire cable clamp; the combination with a metal block having a groove extending longitudinally therein, corresponding with the exterior diameter of a cable; said groove having flutes in the bottom thereof corresponding in spiral curvature with the pitch and lay of the wires in a cable; said block having a bolt hole extending therethrough; of a second metal block having a bolt hole extending therethrough in registry with said bolt hole in the first metal block, and having a groove extending longitudinally therein, corresponding with the exterior diameter of a cable, and adapted to register with the groove in said first block and having projections in said second metal block arranged to respectively register with regions of minimum diameter of a cable positioned in said clamp by said flutes; and a bolt arranged to extend through said registered bolt holes and having a nut; whereby said blocks may be compressed toward each other to clamp a cable at regions of minimum diameter.

1,579,007. TYPEWRITING MACHINE. ALFRED G. F. KUROWAKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 28, 1923. Serial No. 670,262. 4 Claims. (Cl. 197—136.)

1. In a typewriting machine, the combination with a rotary platen, of a card or label holding device comprising a plate of resilient sheet-material curved to conform to the curvature of the platen when the holder is distended, and of such width as securely to clasp the platen by reason of such resiliency, and a resilient clip-finger set and secured to the plate and projecting laterally therefrom, longitudinally of and against the platen; the plate being shaped to provide two spaced, platen-gripping tongues on the edge thereof, of a resiliency to permit easy placement and removal of the device.

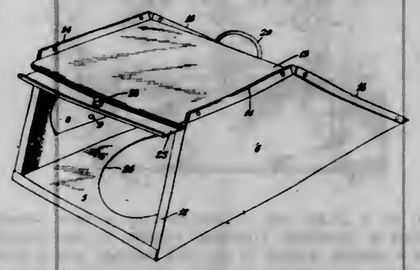
1,579,008. WIRE TERMINAL CONNECTER. JAMES LAKE, Jr., New York, N. Y., assignor to George G. Erb, New York, N. Y. Filed May 21, 1921. Serial No. 471,838. 1 Claim. (Cl. 173—269.)

An electric terminal connecter comprising in combination a flat connecter strip apertured at one end and provided with spring attaching jaws at its opposite end, a ferrule having a portion thereof formed for engagement around a cable terminal and having an eyelet at one end thereof adapted to be inserted in the aperture of said connecter strip, and a ferrule having a portion formed for engagement over a cable terminal at one end and an eyelet in the opposite end thereof, said last named ferrule eyelet having an upstanding shank for engagement of a cable there-around, said shank being formed for insertion through the ferrule eyelet in said connecter strip and riveted thereover.



1,579,009. HIGH-FREQUENCY APPARATUS AND METHOD OF HEATING. IRVING LANGMUIR, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 23, 1924. Serial No. 715,482. 6 Claims. (Cl. 204—64.)

2. A high frequency heating device comprising a primary inducing coil and a conductive body which is partly closed upon itself in inductive relation to said coil, said body being discontinuous in the direction in which currents are induced.

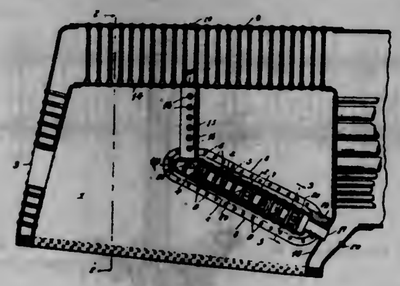


1,579,010. ENGINE. HYMAN LEVINE, Denver, Colo., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 27, 1925. Serial No. 71,807. 3 Claims. (Cl. 121—82.)

1. An engine comprising a cylinder having front and rear heads, a reciprocating frame piston within said cylinder, a rotary piston within said frame piston, a port in said rotary piston for each end face of the frame and rotary pistons, a set of inlet ports in the front head of said cylinder corresponding to said ports in the rotary piston, a set of exhaust ports spaced

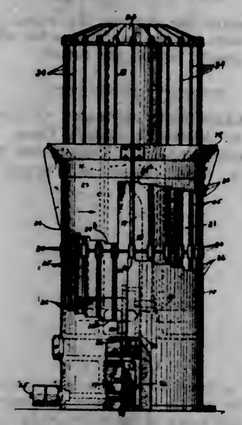
from the set of inlet ports to cooperate with said ports in the rotary piston, and additional exhaust ports in the rear face of said rotary piston and the rear cylinder head for exhausting motive fluid from the engine.

1,579,011. BROILER HOOD. WILLIAM A. MCCLELLAND, Ridgewood, N. J. Filed Feb. 16, 1922. Serial No. 536,857. 2 Claims. (Cl. 126—300.)



1. A cooking hood adapted to be used in connection with a cook stove comprising a box-like structure having an opening adapted to register with an opening in the top of the stove over which the cooking is done and further provided with an exit opening adapted to register with another opening in the top of the stove through which the cooking odors are adapted to be expelled, an arcuate shaped hinge member carried at one end of the box-like structure, and a door closure having closure supporting guides arranged within said box-like structure, a hinge portion normally interlocking with said hinge member but releasable therefrom, said closure being adapted to be swung about the axis of said hinge portion to sever its interlocking engagement with said hinge member to permit said closure to be thereafter moved rearwardly into said box like structure over said guides.

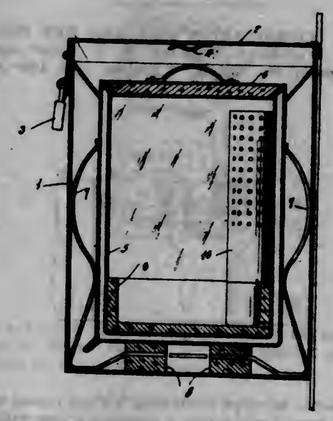
1,579,012. STEAM BOILER. ALEXANDER C. MCCLURE, Louisville, Ky. Filed Feb. 14, 1924. Serial No. 692,818. 1 Claim. (Cl. 122—63.)



In a steam boiler, a hollow arch located in the rear portion of the fire box and inclined downwardly towards the rear wall thereof, said arch being made of sheet metal and having open ends secured to the inner walls

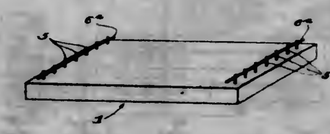
of the opposite sides of the fire box, said open ends having outwardly directed integral flanges secured to said inner walls by welding, the flanges being fluted to provide compensation for contraction and expansion of the boiler

plates, the lower end of said arch being spaced from the flue sheet at the rear of the fire box, tubes connecting the flue sheet and said lower end of the arch, and water columns connecting the upper end of the arch and the crown sheet.



1,579,013. CORK-ROD-PACKING MACHINE. CHARLES E. MCMANUS, New York, N. Y. Filed Dec. 1, 1923. Serial No. 678,056. 12 Claims. (Cl. 18—5.)

1. A cork rod packing machine embodying therein a sequence of plungers of substantially uniform length, means reciprocating said plungers, a rotatable carrier for a plurality of tubes whereby said tubes respectively may be brought into operative relation to succeeding plungers, supports for said plungers whereby each of said tubes will be held against downward movement with a plunger, said supports being of decreasingly graduated heights with relation to the plungers, whereby the tubes with each actuation of said carrier will be permitted to descend from one of said supports to the other, and means for delivering a measured quantity of cork composition to within each tube while upon each of said supports.



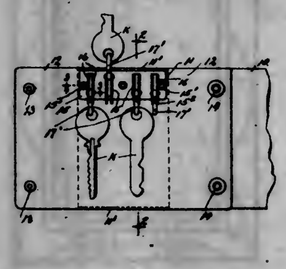
1,579,014. BOTTLE HOLDER. BENJAMIN L. MARETT, Olivia, Minn. Filed Oct. 28, 1924. Serial No. 746,269. 2 Claims. (Cl. 220—9.)

1. A holder of the character specified comprising a refrigerator having a food compartment, and an ice receptacle within said compartment, said receptacle being open adjacent the top and in communication with the space of the compartment, the lower portion of the receptacle being imperforate for the purpose specified, a lining within said compartment, said receptacle be-

ing located snugly at one corner of the chamber and having the imperforate portion reduced intermediate its ends to provide a shoulder engaging the upper edge of said lining.

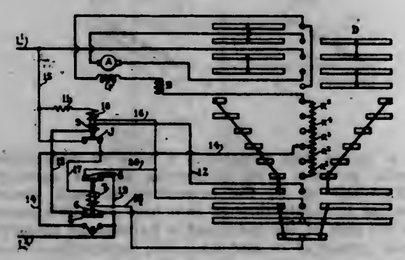
1,579,015. CEILING CONSTRUCTION. HERBERT E. MARKS, Glen Osborne, Sewickley, Pa. Filed Mar. 1, 1924. Serial No. 696,210. 5 Claims. (Cl. 72—68.)

1. A ceiling slab comprising a body of cementitious material provided with reinforcing strands extending longitudinally of it, the extremities of said strands projecting upwardly through said body at points spaced from the ends of the body, and a transversely extending member connected to said projecting extremities of said strands for engagement by slab-supports.



1,579,016. ROOF CONSTRUCTION. HERBERT E. MARKS, Glen Osborne, Sewickley, Pa. Filed Apr. 20, 1925. Serial No. 24,227. 5 Claims. (Cl. 108—6.)

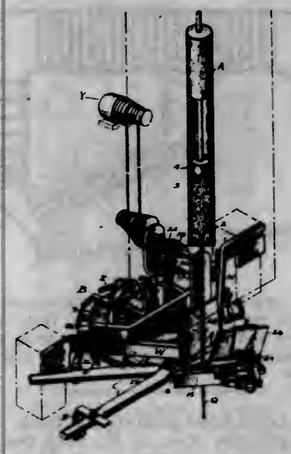
1. A roof comprising spaced purlins, preformed slabs of cementitious material supported at their ends by the purlins, the upper portions of the adjacent sides of said slabs being offset to form gutters between the slabs, layers of waterproofing material covering the tops of the slabs and extending downwardly over said gutter-form-



ing sides of the slabs, and monolithic bodies of cementitious material formed in said gutters and sealing the lower edges of said waterproofing layers, the tops of said bodies being below the plane of the tops of the slabs and being waterproof.

1,579,017. COMBINATION BILL AND KEY FOLDER. MAX J. MARYMONT, Brooklyn, N. Y. Filed Apr. 15, 1925. Serial No. 23,246. 3 Claims. (Cl. 150—40.)

3. A folder for keys comprising a rigid means fixed to the inner face of said folder, a plurality of key supporting members movably carried by said rigid means and means for retaining individually said key supporting members in position, when not in use.

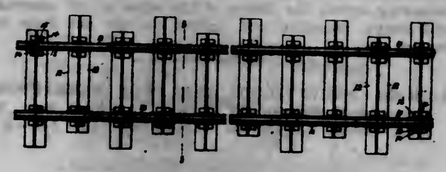


1,579,018. ELECTRICAL CONTROLLER. WILLIAM R. MILBURN, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 5, 1922. Serial No. 579,869. 9 Claims. (Cl. 172—179.)

1. A controller for electric motors comprising regulating resistance for the motor, means for excluding and including said resistance, and means acting independently of the former means for insuring inclusion of a predetermined value of said resistance in circuit with the motor under predetermined conditions before or after completion of said resistance excluding operation and for maintaining said predetermined value of resistance in circuit pending a given subsequent operation of said first mentioned means.

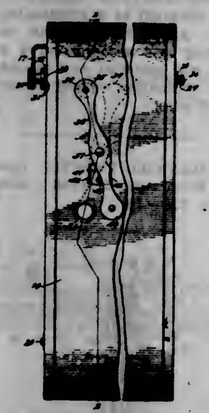
1,579,019. MACHINE AND PROCESS FOR PREPARING QUARTZ. LEVI B. MILLER, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed July 18, 1924. Serial No. 726,865. 29 Claims. (Cl. 49—1.)

1. In a machine for cutting plastic quartz, a cutter, means for squirting the plastic quartz through an opening into operative relation with respect to the cutter for cutting purposes, means for seizing a length of the plastic quartz before the cutting operation is performed,



said cutter adapted for cutting the seized length from the squirted plastic quartz, and means for advancing the cut lengths of quartz beyond the cutter.

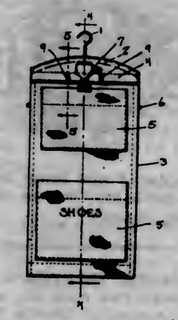
1,579,020. PULLER FOR PRIMARY CUT-OUT PLUGS. ELLSWORTH F. MINER, Litchfield, Conn., assignor to General Electric Company, a Corporation of New York. Filed June 2, 1925. Serial No. 34,460. 5 Claims. (Cl. 81—3.)



1. A plug puller comprising a hooked member having provision for receiving the end of a plug sidewise therein, and a guard member swiveled relatively to the hooked member and adapted upon rotation of said hooked member relative to the plug to retain the plug in engagement with said hooked member.

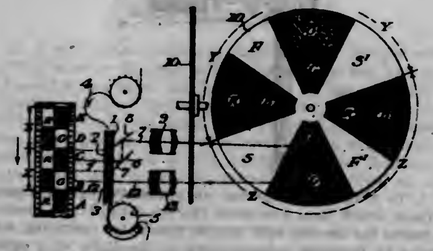
1,579,021. RAILWAY-TIE CONSTRUCTION. GEORGE W. MULLER, Washington, D. C. Filed July 9, 1925. Serial No. 42,589. 9 Claims. (Cl. 238—27.)

8. In a railway tie construction, a plurality of staggered groups of connected ties.



1,579,022. PHOTOGRAPHIC CAMERA. DAVID A. MURRAY, Santa Monica, Calif. Filed Nov. 9, 1922. Serial No. 599,767. 4 Claims. (Cl. 95—31.)

1. In a camera, the combination with a casing adapted to have a numbered roll-film mounted therein and provided with an aperture through which the numbers may be seen as full-length sections of film are successively brought into position for exposure, and an auxiliary aperture so located that the numbers may be seen when the film is in an intermediate position, of screen mechanism manipulated from the exterior of the casing adapted to be brought into or out of use so as to cut down the area of exposure to an automatically-determined fraction of a full-length section of the film, and a cover for said apertures constructed so that it can be brought into cooperation with only one of said apertures at a time thereby furnishing an indication as to whether the film is being operated for full length or fractional length exposures.

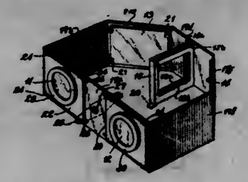


1,579,023. CLOTHES HANGER. DALTON B. MYERS, Los Angeles, Calif. Filed Dec. 26, 1922. Serial No. 608,900. 2 Claims. (Cl. 223—62.)

1. A clothes hanger comprising a curving rigid member adapted to hold coats from their shoulder portions, a fabric member supported at one end from said rigid member and having a plurality of pockets suspended therebelow for separately receiving articles of clothing, means for suspending trousers and preventing their creasing,

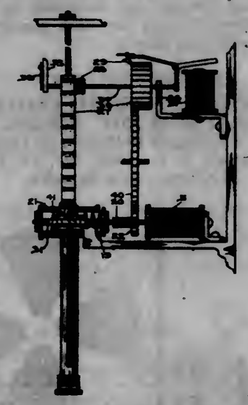
and a hat clasp secured and positioned on said fabric member to extend through the neck portion of a coat when held on said rigid member.

1,579,024. METHOD OF AND APPARATUS FOR MOTION-PICTURE PROJECTION. FREDERICK T. O'GRADY, Flushing, N. Y., assignor to Helen Vogt O'Grady, Flushing, Long Island, N. Y. Filed Dec. 12, 1923. Serial No. 680,135. 3 Claims. (Cl. 88—16.4.)



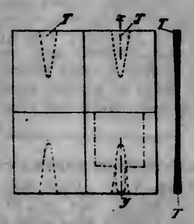
1. The method of projecting motion pictures in colors from a positive film having a series of successive pictures arranged thereon in alternating color selective images, consisting in projecting the color selective images in pairs simultaneously, superimposing said simultaneously projected pictures on the viewing screen, moving the film through the projection mechanism one picture area at a time whereby each image will be projected twice on the screen, once with the preceding image and once with the following image, providing orange, red, green and blue color screens, and changing said screens to correspond with the changes in the color selective images in the projecting mechanism, whereby each image of one selective color will be projected twice through orange and red screens and each image of another selective color will be projected twice through green and blue screens.

1,579,025. STEREOSCOPIC APPARATUS. FREEMAN H. OWENS, New York, N. Y. Filed May 7, 1924. Serial No. 711,574. 8 Claims. (Cl. 88—31.)



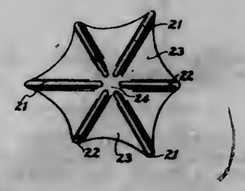
1. A stereoscopic viewing apparatus comprising a pair of optical viewing devices occupying right and left eye positions, means for locating an image carrying element in a median plane intermediate the optical viewing devices and in a region substantially midway between the

axes of the optical devices, said element being provided with images viewable from opposite sides of the same, and reflecting means arranged behind the optical devices



and on opposite sides of said image locating means for relating each of the optical devices with an image on said image carrying element.

1,579,026. AUTOMATIC TELEPHONE SYSTEM. WILLIAM WALTER OWEN, Oak Park, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Mar. 10, 1919. Serial No. 281,779. 16 Claims. (Cl. 179—27.5.)

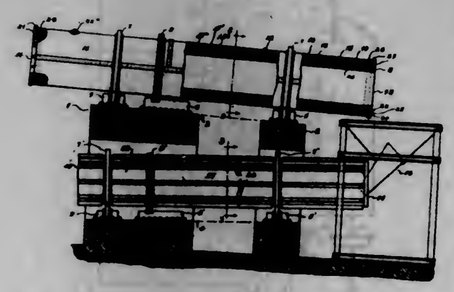


1. In a telephone system, an automatic switch having wipers, trunk lines accessible thereto divided into groups, a motor for moving said wipers, means for operating said motor by impulses corresponding to the digits of a called number, a revolving armature for said motor and means for causing said armature to first move said wipers in one plane and then in another plane in response to said impulses to seize one of said trunk lines.

1,579,027. PROCESS FOR THE MANUFACTURE OF TOOLS OR IMPLEMENTS. ARMAND PAILLONCY, Chenecière, France. Filed June 12, 1924. Serial No. 719,628. 1 Claim. (Cl. 76—113.)

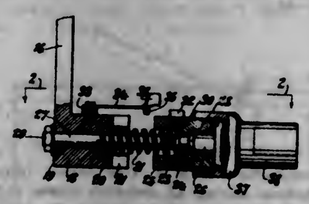
The process of manufacturing tools which consists in first heating a mass of metal, piercing the mass at opposite sides to provide opposed aligned openings for forming sockets, then rolling the mass into plate form in a direction longitudinal to lines passing through said aligned openings, cutting the plate into as many blanks as there are to be tools and in each of which the part which will form the socket is centered with respect to the opening therein, cutting from each blank a tool of substantially the approximate shape desired with a tang extending within the limits of the edges of the opening, and finally reheating and rolling the cut out piece to correct size.

1,579,028. FRUIT JUICE AND PULP EXTRACTOR. RAYMOND E. PONDER, St. Louis, Mo. Filed Sept. 3, 1924. Serial No. 736,593. 11 Claims. (Cl. 146—3.)



1. A fruit juice and pulp extractor, comprising, a frame, a spindle mounted at a substantial inclination for rotation thereon, an extracting head on said spindle, means for rotating said spindle and a pan adapted to receive the extracted material and inclined substantially parallel with the inclination of said spindle so as to drain off the juices and pulp.

1,579,029. MECHANICAL PENCIL. CONSTAN E. HANG, Chicago, Ill. Filed Apr. 2, 1923. Serial No. 628,352. 4 Claims. (Cl. 120—18.)



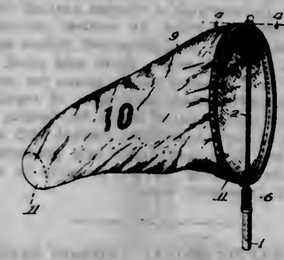
1. A pencil, comprising a shell, a screw shaft rotatably mounted in the shell, means preventing accidental longitudinal movement of said shaft, an operating head on the shaft and positioned outwardly of one end of the shell, a guide member telescoped over the screw shaft, a nut on the outer end portion of the guide member in which the screw shaft is threaded, a lead holder slidable in the inner end of the guide member, an end guide member mounted in the end of the shell remote from the operating head, a guide extension carried by the end member and having its inner end slidable in the lead holder and screw shaft, and, means carried by the lead holder for securing the inner end of a lead therein, the outer end projectable outwardly of the shell through the end member.

1,579,030. TUBULAR PROCESSING APPARATUS. HOMER L. RANK and HURXTHAL F. FERGER, Canton, Ohio. Filed Dec. 31, 1924. Serial No. 759,216. 15 Claims. (Cl. 263—32.)

3. A tubular processing apparatus including an outer tubular shell, an inner tubular shell, a chamber between the shells, means closing the ends of the chamber, and a tubular trussed structure in the chamber spacing and maintaining the shells.

1,579,031. AUTOMATIC DISENGAGEABLE CRANK. LEON REIDER, Brooklyn, N. Y. Filed Jan. 26, 1925. Serial No. 4,640. 2 Claims. (Cl. 123—185.)

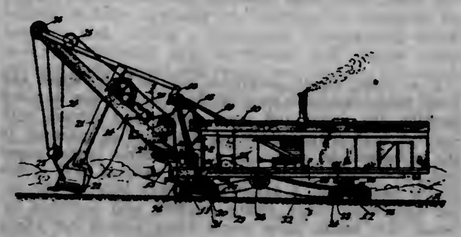
2. A safety crank comprising a lever provided with a handle at one end and a hub at the other, a sleeve, a spindle connecting said sleeve and hub, a spring encircling the spindle to press the sleeve away from the hub, clutch elements carried co-operatively by said hub and sleeve, a latch pivoted to said hub, a pin fixed in said sleeve engageable by said latch whereby said clutch elements are held in operative engagement, an adapter carried by said sleeve, a spring interposed between said lever and the handle thereon, and means for releasing the latch upon completion of handle movement.



1,579,032. PROCESS OF MAKING A VITRIFIED COMPOSITION. FRANÇOIS RICHARD, Cleveland, Ohio. Filed Dec. 4, 1920. Serial No. 423,889. 3 Claims. (Cl. 25—156.)

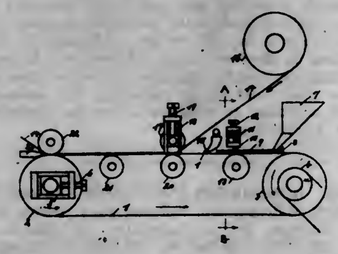
1. The process of making a vitrified insulator which consists in mixing a natural clay containing about fifty-six per cent of silica, about twenty per cent of alumina, about eight per cent of sesquioxide of iron, and alkalies, with enough water to make a plastic mass, molding to desired shape, heating to about 900° Fahrenheit and then raising the temperature to not over 1600° Fahrenheit and then maintaining the temperature at not over 1600° Fahrenheit whereby to wholly vitrify the mass and then allowing to cool.

1,579,033. PROCESS FOR THE MANUFACTURE OF SYNTHETIC EMERALD STONES. JOSÉ FERRER RIERA, Barcelona, Spain. Filed Oct. 4, 1924. Serial No. 741,779. 1 Claim. (Cl. 106—36.1.)



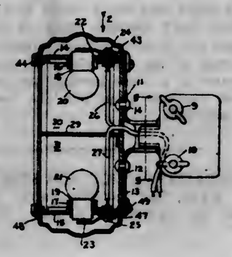
A process of manufacture of synthetic emerald stones consisting in fusing a mixture of silica, tinted with green or greenish colouring material, with hydrated or anhydrous oxide of glucinium and with alumina together with substances to act as flux, subsequently breaking or dividing up the fused mass obtained into fragments of determined size and heating the fragments anew in order to soften them, and finally subjecting the softened fragments to moulding or compression for the transformation of their appearance.

1,579,034. GOLF-GREEN INDICATOR. EDWARD GEORGE ROBERTS, Chicago, Ill., assignor to J. Oliver Johnson, Inc., Chicago, Ill., a Corporation of Illinois. Filed Nov. 12, 1925. Serial No. 68,631. 8 Claims. (Cl. 116—174.)



6. A golf green indicator comprising an upright pole, a ring member disposed in a vertical plane and swiveled adjacent to its upper and lower edges to the pole, and a tapering tubular cloth member open at both ends and having its larger end formed into an annular hem housing the major portion of the ring member, the ring member being constructed of a wire having one end detachable from other end thereof to permit the insertion of the ring into the said hem.

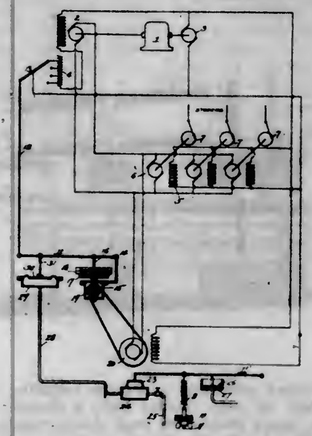
1,579,035. LEVELING DEVICE FOR STEAM SHOVELS. MICHAEL B. RYAN, Los Angeles, Calif. Filed May 21, 1925. Serial No. 31,839. 9 Claims. (Cl. 105—149.)



2. In a steam shovel, a cam rotatably mounted on an axle of a truck of the steam shovel, a member secured to the underside of the shovel directly above said cam, a cable connecting said cam with the hoisting drum of the steam shovel, said cam adapted to engage said members secured to the underside of the shovel and elevate one end of the steam shovel when the hoisting drum is rotated and means for retaining the end of the steam shovel in elevated position.

1,579,036. COATING OF WEBS OF PASTEBOARD, FABRIC, OR THE LIKE. LUDWIG SCHWABE, Hamburg, Germany. Filed May 21, 1924. Serial No. 714,779. 3 Claims. (Cl. 91—54.)

1. A device for applying a viscous coating mass to a layer of material including an endless movable band, drums over which said band is passed, rollers supporting said drums, a scraping device above said band, pressure rollers behind said scraping device, means for continuously applying a coating mass in a layer of regular thickness on to said endless band, means for feeding one surface of a web or paste board into contact with said coating as said web is passed under said pressure rollers, and means for applying further pressure to said web before passing from said band.

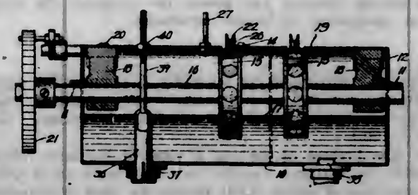


1,579,037. TRAFFIC SIGNAL. RICHARD SMITH, Yuma, Ariz. Filed Apr. 1, 1925. Serial No. 19,850. 2 Claims. (Cl. 177—329.)

2. A traffic signal comprising a back plate, upper and lower heads extending from the back plate, posts mounted between the upper and lower heads and formed with vertical confronting slideways, glass plates mounted in the slideways, an upper and a lower cover on the upper and lower heads, means removably securing said covers to the said heads, a partition halfway between the upper and lower heads, means securing said partition between said heads, glass plates being colored red above the partition and blue below the partition and the words "Right" appearing above the partition and "Left" below the partition, and lamps secured to the heads on the inside thereof.

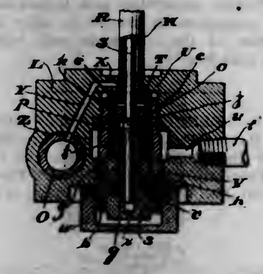
1,579,038. MOTOR REGULATOR. CHARLES H. SMOOT, Maplewood, N. J. Filed Feb. 27, 1925. Serial No. 12,112. 5 Claims. (Cl. 172—239.)

1. In a control system for variable speed motors, the combination comprising a generator supplying variable voltage, means for varying the voltage of the generator, means responsive to work requirements for adjusting such variation means, centrifugal governor means for counter-



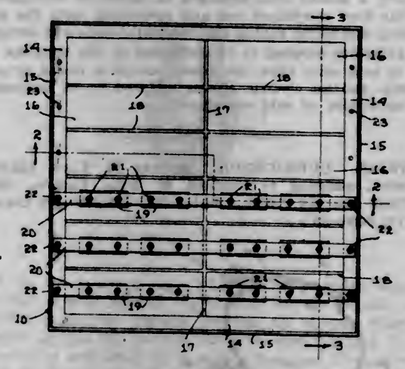
balancing said adjusting means, and variable speed electric motors in circuit with the said generator, one of which is used for driving the centrifugal governor means.

1,579,039. SAW BLADE. WILLIAM C. STEFFAN, FRANK B. ACKERMANN, and WALTER J. GREINER, Chicago, Ill. Filed Dec. 29, 1924. Serial No. 758,736. 6 Claims. (Cl. 145—31.)



3. In combination with a saw frame including a clamping member having an undercut recess and a slot intersecting the same, a blade having its end portion formed to provide a laterally projecting flange, said flange being disposed in parallelism with the contacting undercut wall of the recess.

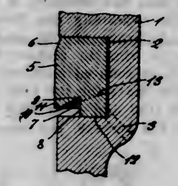
1,579,040. YARN-DYEING DEVICE. GEORGE T. THOMAYER, Albany, N. Y., assignor, by mesne assignments, to Economy Dyeing Machine Corporation, Albany, N. Y., a Corporation of New York. Filed Oct. 17, 1924. Serial No. 744,098. 6 Claims. (Cl. 8—18.)



1. Apparatus of the type described which comprises, a dye tank, a cover for said tank, said cover having an opening therein, a power shaft means mounted from said cover to support the power shaft, a dye wheel on said shaft projecting into said opening, the cover, supporting means, power shaft and dye wheel being removable as a structure from said tank.

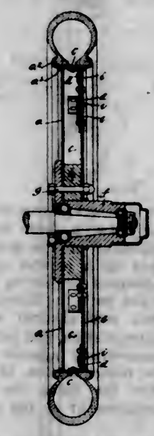
1,579,041. WATER-TUBE CONNECTION. GROVER G. TUTTLE, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 11, 1925. Serial No. 55,682. 2 Claims. (Cl. 121—10.)

1. In a fluid actuated rock drill, the combination of a cylinder with a back head, a recess in said back head, a tubular water plug in said recess, an air tube supported in the back head, a flange on said air tube to seat on the bottom of the recess, a water tube arranged concentrically in the air tube and extending through the water plug, said water tube having a bulb near one end, a spring pressed retainer slidable on the water tube for holding the air tube on its seat, a recessed water tube guide slidable in the water plug, and a spring in the water tube guide for holding the bulb yieldably against said guide.



1,579,042. BRICK AND BLOCK MOLD. WILLIAM WATKINS, Oakland, Calif. Filed July 1, 1925. Serial No 40,904. 3 Claims. (Cl. 25—121.)

1. A mold of the kind described comprising an open frame, a skeleton frame insertible in the open frame and comprising a connected series of partition members dividing the space comprehended by the main frame into compartments, the main frame having a ledge bounding the side walls at the upper edge, and an upstanding flange extending throughout the length of the ledge at the outer edge of the latter.

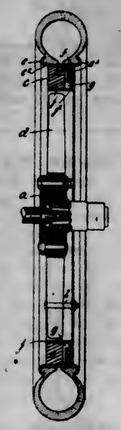


1,579,043. PISTON RING. ARTHUR A. WESTER, Denver, Colo. Filed Sept. 21, 1925. Serial No. 57,570. 2 Claims. (Cl. 74—109.)

1. A piston ring whose lower surface lies in two vertically spaced planes, said ring having a triangular shaped groove extending the entire length of its lower surface, the rear wall of said groove being perpendicular to the plane of the base and intersects the lower base plane, the inclined wall of said groove extending outwardly in

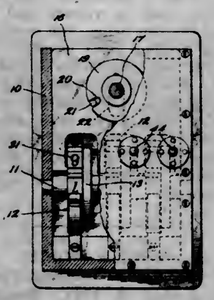
a downward direction and intersects the upper base plane a short distance from the outside of the ring so as to provide a narrow annular surface, said ring having openings connecting said groove with the rear thereof.

1,579,044. ROAD-VEHICLE WHEEL HAVING DETACHABLE TIRE. THOMAS WESTLEY, Dudley, England. Filed Mar. 13, 1923. Serial No. 624,824. 1 Claim. (Cl. 301—63.)



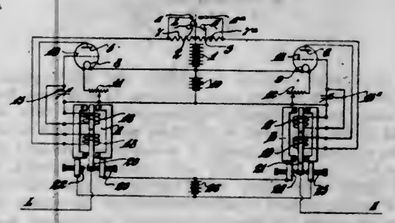
A vehicle wheel comprising an axle box, a disk secured to the axle box and having a peripheral tire-engaging flange, a rim flange secured at one side edge to the disk at the base of the peripheral tire-engaging flange, the said rim flange having angular locking plates secured thereto with the flanges of said latter plates projecting radially inwardly at intervals, a rotatable detachable disk having a peripheral tire-engaging flange with a cylindrical base to receive and engage under the outer edge of the rim flange, the rotatable detachable disk also having locking plate members secured thereto with the outer free extremities spaced therefrom to removably receive the inwardly projecting locking plates secured to the rim flange, and securing devices for uniting the disks and holding the detachable disk against rotation relatively to the said rim flange, the rotatable disk by its movement in one direction setting up a firm locking engagement of the locking plates with the locking plate members.

1,579,045. ROAD-VEHICLE WHEEL HAVING DETACHABLE SIDE RING. THOMAS WESTLEY, Dudley, England. Filed May 12, 1924. Serial No. 712,813. 1 Claim. (Cl. 152—21.)



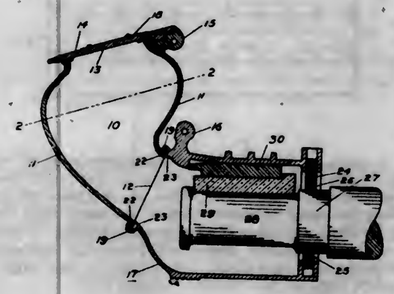
A vehicle wheel comprising a felly with a chamber formed in one side thereof, a metal ring fixed to the inner side of the felly and projecting outwardly to form a base closure for the chamber, a rim member fixed over

the felly and carrying one rim flange, a plurality of circumferentially arranged locking plates spaced apart on the rim member and projecting inwardly towards the center of the wheel into the chamber, a detachable side ring formed with the remaining rim flange to coact in opposition to the rim flange of the said rim member, keepers secured to the ring in regular spaced relation and provided with outer reduced portions standing away from the ring to form seats for the lock plates, the lock plates being movable into and outwardly from the seats provided therefor in the keepers, the inner opposing sur-



faces of the keepers and lock plates being beveled to set up a wedging action between these devices when in engagement, the engagement of the lock plates with the keepers being effected by a partial rotation of the detachable ring, the keepers projecting into the channel of the rim member and both the keepers and lock plates being enclosed within said channel and shielded from weather wear and deterioration, the detachable ring when applied abutting transversely against the edge of the ring secured to the inner portion of the felly, and a single securing device for fixing the side ring to the felly to prevent displacement of the latter.

1,579,046. KEYLESS LOCK AND PERMUTATION WHEEL FOR THE SAME. MEADE WILDRICK, Savannah, Ga., assignor to W-H Keyless Lock Company, Limited, Honolulu, Territory of Hawaii, a Corporation of the Territory of Hawaii. Filed Oct. 27, 1924. Serial No. 746,176. 4 Claims. (Cl. 70—53.)



1. A lock comprising a casing, a lock mechanism including a plurality of independently settable permutation tumblers mounted in said casing, each of said tumblers comprising a concealed lock-controlling element and an indicia-bearing element exposed for manipulation through a slot in said casing, couplings normally preventing relative combination changing movements between the composite elements of said tumblers, and coupling-disabling means accessible from the exterior of the assembled lock whereby said couplings may be rendered ineffective, thereby permitting said indicia-bearing to be directly and independently moved to effect a change in the combination of the lock while said lock-controlling elements are held fast.

1,579,047. ELECTRIC-CIRCUIT-CONTROLLING MEANS. HAROLD FRANK WOODMAN, Croydon, England, assignor to Harold Frank Woodman and Creed & Co., Limited, Croydon, Surrey, England. Filed Dec. 16, 1925. Serial No. 75,838. 13 Claims. (Cl. 178—71.)

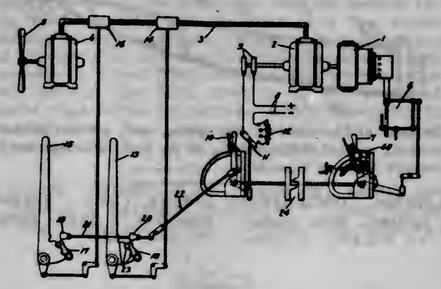
1. Electric circuit controlling means comprising a thermionic valve having an anode, grid and filament, an anode circuit including a high tension battery associated with said anode, a switch for closing and opening said circuit, a grid circuit associated with said grid, a low tension battery connected to said filament and to the anode and grid circuit, a coil arranged in the anode circuit, a second coil arranged in inductive relationship to the first mentioned coil and associated with the grid circuit, means for tuning the associated coils and circuits, an armature adapted to be oscillated by the impulses set up in said coils when the anode circuit is closed by said switch and an electric circuit adapted to be controlled by oscillation of said armature.

1,579,048. LUBRICATOR. RODNEY H. YALE, Lincoln, Nebr., assignor to Rexford W. Yale, Lincoln, Nebr. Filed Aug. 23, 1923. Serial No. 658,962. 4 Claims. (Cl. 308—83.)

4. In combination, a journal, a bearing and supporting elements therefor, a container having its middle portion enlarged on two or more of its sides and adapted to confine a relatively large store of non-fluid lubricant in communication with said journal and bearing and so positioned that it will supply the journal and bearing with new lubricant when vibrated or jarred.

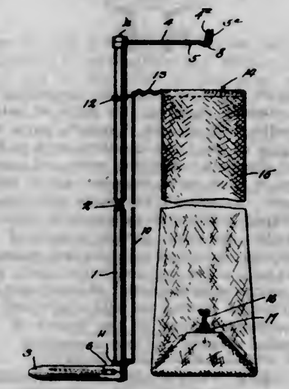
1,579,049. RETARDATION DEVICE. CHESTER D. AINSWORTH, Wollaston, Mass., assignor, by mesne assignments, to Condit Electrical Manufacturing Corporation, Boston, Mass., a Corporation of Massachusetts. Filed May 19, 1921. Serial No. 471,004. 10 Claims. (Cl. 175—372.)

1. A retardation device including a cylinder, and a piston therefor including a stem having a fluid passage therein which has an opening at the top of the stem and a second and lower opening in the side of the stem, and a sleeve conformed with and movably fitting within said cylinder and surrounding and free for axial movement on said stem to control fluid flow through said fluid passage.



1,579,050. WIRE CONNECTION FOR ELECTRIC PLUGS. ORGERIO ABRADINI, Fairbank, Pa. Filed Nov. 11, 1922. Serial No. 600,330. 2 Claims. (Cl. 173—361.)

1. In combination, an electric plug provided with a contact, a stud applied to the plug and in electric connection with the contact thereof, an electric wire, a socket applied to the electric wire and adapted to be coupled to said stud by a snap action and to relatively turn to prevent torsional strain on the wire, and a cap receiving the wire and having screwthread connection with the plug and adapted to prevent casual separation of the socket from the stud.

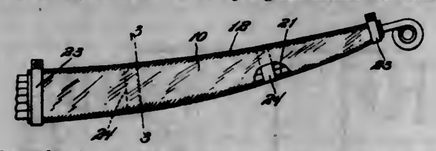


1,579,051. ELECTRIC SHIP PROPULSION. ERNST F. W. ALEXANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 11, 1920. Serial No. 429,858. 8 Claims. (Cl. 172—8.)

1. A ship propulsion system wherein a prime mover driven generator is arranged to supply current to a propeller driving motor and wherein means are arranged to control the generator and motor connections for maneuvering purposes, and wherein governing and speed adjusting means are arranged to control the prime mover, characterised by the fact that a stop mechanism is arranged normally to prevent movement of said speed adjusting means to a position below that where maneu-

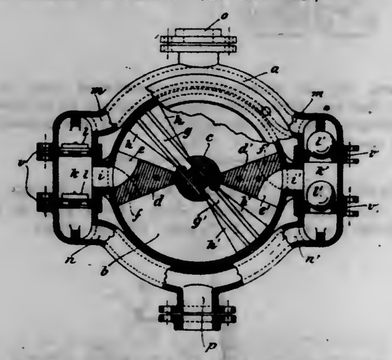
vering may be successfully accomplished, and by the fact that said stop mechanism is arranged to be rendered ineffective where it is desired to run continuously at low speed.

1,579,052. FRUIT PICKER. MAUDE VAN NORMAN ALTVATER, Grant Orchards, Wash. Filed July 3, 1925. Serial No. 41,308. 2 Claims. (Cl. 56—335.)



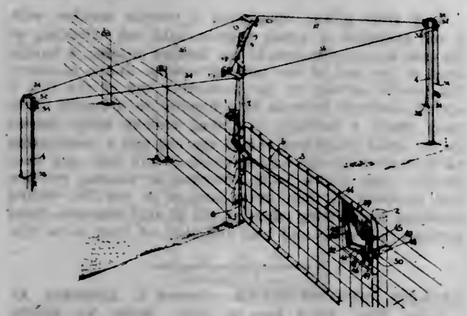
1. A fruit picker comprising a tubular member with a rod arranged to rotate therein, said rod extending at its ends beyond the ends of the tubular member, a handle fixed to one end of the tubular member and a cooperating handle carried by the projecting end of the rod, a spring mounted between said handles to normally force them apart, a laterally extending cutting blade carried by the other projecting end of the rod and a cooperating blade carried by the adjacent end of the tube and fixed thereto, said blades being arranged in lapping relation and provided at their outer ends with cup-like cutting elements, the cutting edges of one of said elements being notched to receive and hold the stem of fruit to be cut.

1,579,053. SPRING COVER. JOSEPH C. ANDERSON, Algoma, Wis. Filed June 9, 1925. Serial No. 36,028. 1 Claim. (Cl. 267—37.)



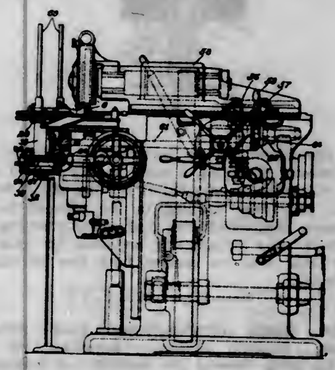
1. A spring cover for the leaf springs of vehicles comprising a tapered strip of material having at its longitudinal edges metallic strips attached thereto and having

their free edge portions oppositely reverted to provide interengaging hooks whereby the strip of material may be held in position about the spring and means for seating



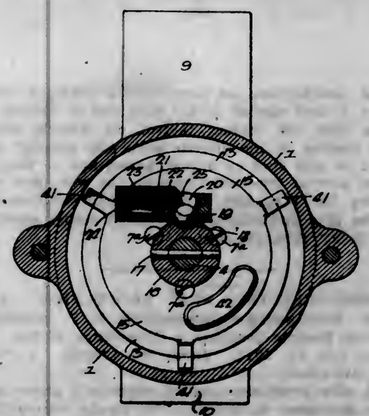
the ends of the cover to the spring, each of said hooked portions of said strips having in its bight a compressible element forming a packing.

1,579,054. OSCILLATING PISTON PUMP. SAMUEL ARMUTH, Wien, Austria. Filed Nov. 2, 1923. Serial No. 672,428. 2 Claims. (Cl. 103—145.)



1. A pump of the class described comprising a casing providing a circular chamber, two pairs of valve chambers on opposite sides of said chambers, ports each connecting one pair of the valve chambers with said circular chamber, and channels connecting with said valve chambers, a valve in each valve chamber, all of said valves being arranged to open in the same direction, a pair of sector shaped abutments in opposite sides of said circular chamber and each having a pair of channels opening in opposite sides and each channel communicating with one of said ports, an oscillating shaft extending through the center of said circular chamber and a pair of oppositely arranged pistons on said shaft and each arranged to oscillate in one of the spaces in the said circular chamber between the said abutments.

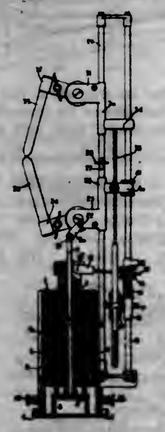
1,579,055. GATE. GOTTFRIED ARN, Monticello, Wis. Filed Jan. 24, 1924. Serial No. 688,235. 1 Claim. (Cl. 39—35.)



A gate structure of the character described, comprising spaced head and latch posts, a gate hinged to the head post, a standard fixed to the hinged end of the gate and rising a distance above the same, a T-fitting on the upper end of said standard, a cross-arm trained through the T-fitting, L-shaped members pivoted to the outer ends of the cross arm, vertical posts arranged on opposite sides of the head post, brackets carried at the upper ends of the said vertical posts and having pulleys at opposite sides of the same, a lever pivoted medially to the T-fitting and having flexible connection with the short arms of the L-shaped members, and cables connected with the long arms of the L-shaped members and extending in opposite direction and trained over said pulleys, and a latch carried by the gate and co-operating with the keeper on the latch post and having connection with one end of the lever.

1,579,056. GRINDING MACHINE. WILLIAM ARTER, Worcester, Mass. Filed Sept. 6, 1921. Serial No. 498,658. 39 Claims. (Cl. 51—50.)

1. A grinding machine of the character described having, in combination, a work holder, a grinding tool, said holder and tool being relatively rotatable, mechanism for the combined delivery of the articles to be ground to and their removal from said holder, and fluid pressure means for actuating said mechanism.

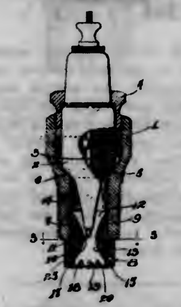


1,579,057. RELEASE CLUTCH FOR GRINDING MILLS. HARRY E. ASBURY, Melrose Park, Pa., assignor to The Enterprise Manufacturing Company of Pennsylvania, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 1, 1924. Serial No. 723,568. 2 Claims. (Cl. 192—56.)

1. The combination in a release clutch, of a shaft; a collar on the shaft, said collar having a groove therein; a member on the shaft and having a tubular projection;

a radial channel in the projection; a sliding plunger in the tubular projection; a spring back of the plunger; and a ball in the radial channel arranged to enter the groove in the collar, the plunger yieldingly holding the ball in engagement with the collar.

1,579,058. ELECTRIC-ARC LAMP. SIMON BOSSA AUSAS, Barcelona, Spain. Filed May 13, 1921. Serial No. 469,320. 4 Claims. (Cl. 176—68.)



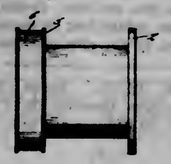
1. An automatically operating electric arc lamp comprising in combination, a supporting frame, carbon holders, slidably mounted upon said supporting frame, carbons carried by said carbon holders, parallel rack members respectively connected with said carbon holders, a pinion disposed between and engaging said racks, a spring for effecting movement of said racks to feed said carbon holders towards one another, a solenoid mounted on the said supporting frame and in circuit with the carbons, an armature movably mounted within said solenoid and having an axial bore, means acting upon the said armature to maintain the same normally in the outer position with respect to said solenoid, a rod connected to one of the carbon holders and extending slidably through the said axial bore within said armature, a rod gripping lever pivoted for limited rocking motion upon said armature, a resilient device mounted upon said frame and acting upon said rod gripping lever, a release device for causing disengagement of the rod gripping lever from the rod, and means to effect passage of current through the solenoid and through said carbons substantially as described.

1,579,059. VEHICLE TIRE. ENOCH W. AUSTIN, Okmulgee, Okla. Filed Mar. 19, 1925. Serial No. 16,752. 1 Claim. (Cl. 152—20.)

The combination with a tire having a shoe of which the side walls terminate in beads with their inner peripheral portions provided with closely engaging meeting edges which define an inner circumferential split, said meeting edges having a closely fitting tongue and groove interlocking connection, of a clamping means comprising complemental rim sections respectively engaging said beads to draw and clamp the meeting edges closely together adjacent said connection, said rim sections having relatively close adjacent edges on a line passing radially through the center of the cross sectional area of the tire shoe and supporting the beads at a point immediately adjacent said tongue and groove connection, said meeting edges being offset to one side of the adjacent edges of the rim sections, thereby preventing the meeting edges from expanding between the relatively close adjacent edges of the rim sections.

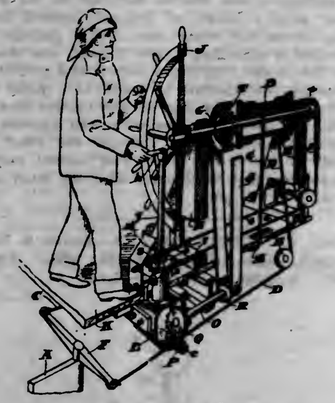
1,579,060. SPARK PLUG. JESSE W. BARNES and THOMAS C. REYNOLDS, Oneonta, N. Y. Filed May 21, 1925. Serial No. 31,871. 4 Claims. (Cl. 123—169.)

1. A spark plug comprising a hollow carrier adapted to be connected to and within and further project from the inner end of the shell of the plug, said carrier forming a passage for the reception of the inner terminal portion of the central electrode of the plug and provided with a series of opposed, spaced electrodes exending across the inner end of said passage, one of said electrodes extending partly through one side of the body of the carrier lengthwise thereof and projecting into said passage, intermediate its ends, to a point in close proximity to the inner end of the central electrode of the plug, and associated therewith, and another of said electrodes extending partly through the other side of said body of the carrier lengthwise thereof and having an exposed terminal for contact with the inner end edge of the shell of the plug.



1,579,061. CIGARETTE FORMER. FRANK B. BARSTOW, Rehoboth, Mass. Filed Feb. 24, 1925. Serial No. 11,055. 2 Claims. (Cl. 131—5.)

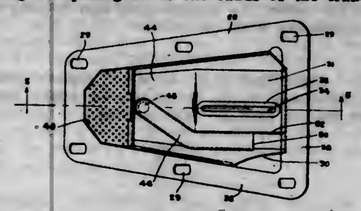
1. In a cigarette former, a hollow forming member adapted to receive the cigarette wrapper thereon, and a plunger receivable in the member and composed of two



wire strands twisted together to provid a spiral formation, the strands at one end having abutting loops conjointly forming a handle and having opposite ends free and divergently related to form angular agitating fingers.

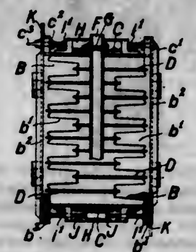
1,579,062. HOISTING DRUM. JOHN M. BASS, Joplin, Mo. Filed Aug. 10, 1925. Serial No. 49,369. 2 Claims. (Cl. 242—117.)

1. A drum of the class described comprising a hollow body having heads on the ends thereof, one of said heads being flanged outwardly, the second head comprising a ring member, spokes connecting the ring member to the body and said spokes merging into a hub, the outer face of the second head having an annular depression, and wedge-shaped notches communicating with the depression, a ring clutch member received in the annular depression and having wedge lugs received in the notches and means passing through the lugs, the said head and the spokes of the second head for removably securing the clutch ring on the drum.



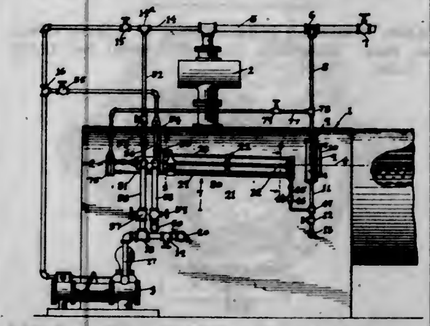
1,579,068. STEERING APPARATUS. LEWIS C. BAYLES, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 3, 1925. Serial No. 66,514. 4 Claims. (Cl. 114—150.)

1. Steering apparatus comprising a steering element, a fluid actuated motor for operating said steering element, a throttle valve for said fluid actuated motor including a manually rotatable control valve, a casing, and a sleeve interposed between said casing and said manually rotatable valve adapted to be automatically rotated by the steering element to close said valve.



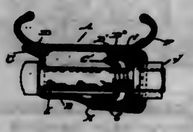
1,579,064. ATTACHMENT FOR MOTOR-VEHICLE TRANSMISSIONS. CARL G. G. BERGSTROM, St. Paul, Minn. Filed June 8, 1925. Serial No. 35,645. 2 Claims. (Cl. 184—11.)

1. An attachment for motor vehicle transmissions comprising a dished member for catching oil thrown off from the fly wheel, said member having an inclined floor portion, a filter at the lower end of said inclined floor portion, the upper portion of the floor of said member having an opening above the bands of the transmission,



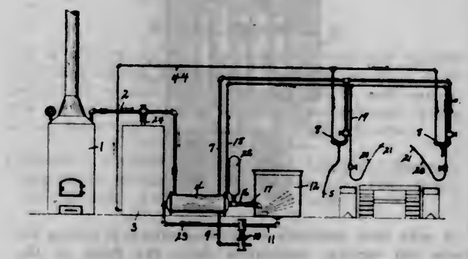
and a tunnel member leading from the upper end of the device, said tunnel member at its lower end being adapted to deliver oil to the clutch fork and ring.

1,579,065. MOLD FOR PRODUCING MOLDED STONE SLABS. CARL BETTERMANN, Hagen, Germany, assignor to Krupp Patent-Platten-Gussform-Vertrieb G. m. b. H., Hagen, Westphalia, Germany. Filed Oct. 20, 1925. Serial No. 63,746. 9 Claims. (Cl. 25—121.)



1. A mold for casting slabs of flat Z-shaped cross section, comprising a bottom plate, two end walls and two side walls fixed to said bottom plate, said side walls carrying inside each a series of projections arranged in a comb-like manner, the projections of one side wall being staggered relatively to those of the other side wall, a partition arranged in each gap existing between two adjacent projections, said partitions extending from the base of the gaps up to the crests of the projections of the other side wall.

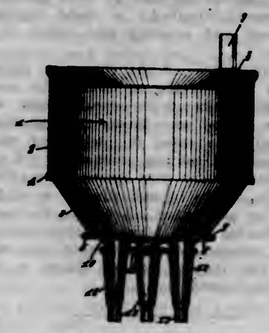
1,579,066. STEAM AND WATER GOVERNOR FOR BOILERS. WILLIAM C. BLUNDELL, Los Angeles, Calif., assignor of one-half to Eugene W. Blundell, Los Angeles, Calif. Filed July 19, 1924. Serial No. 726,999. 6 Claims. (Cl. 103—15.)



1. The combination with a steam boiler and feed water pump, of an expansion tube mounted at the desired water level, one end of the tube being connected to the boiler below the water level and the other end of the tube being connected to the boiler above the water level, a steam pipe connecting the boiler to the pump and having a valve adapted to be opened and closed by the expansion and contraction of the expansion tube, and a water pipe connecting the pump to the boiler and having a valve adapted to be opened and closed by the expansion and contraction of the expansion tube.

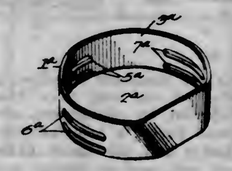
1,579,067. DEMOUNTABLE-RIM-SECURING MEANS. WILLIAM N. BOOTH, Detroit, Mich. Filed Nov. 24, 1919, Serial No. 340,266. Renewed Aug. 26, 1925. 3 Claims. (Cl. 301—24.)

1. The combination with a demountable rim, of a fixed rim having a tapered seat for said demountable rim, a circumferentially extending bead on said demountable rim, means for securing said demountable rim upon said fixed rim including clamping lugs each having a face engaging said bead to force said demountable rim to its seat, and circumferentially extending bearings on said bead for engagement with said clamping lugs, said bearings being inclined to draw the faces of said clamping lugs into fuller engagement therewith.



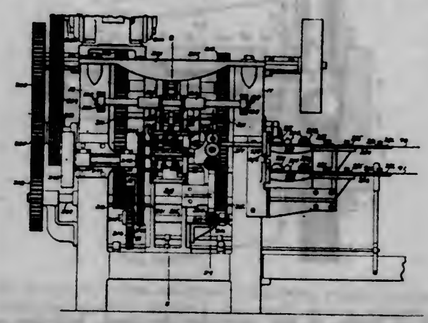
1,579,068. APPARATUS FOR CLEANING OR REMOVING PAINT FROM SURFACES. THOMAS L. BOYCE, Syracuse, N. Y., assignor to National Chemical and Manufacturing Company, Syracuse, N. Y., a Corporation of Arizona. Filed Aug. 24, 1922. Serial No. 584,162. 3 Claims. (Cl. 299—84.)

1. An apparatus of the class described comprising a source of steam, a steam line connecting said source with a tank adapted to contain a cleaning chemical and with a heater through which a paint removing chemical is adapted to circulate, a vat for containing a paint removing chemical, a circulating system in connection with the vat and including the heater connected to said steam line, means for causing the paint removing chemical to circulate through said system under pressure and an atomizing device adapted to be brought into communication with said system.



1,579,069. MILKING-MACHINE WASHING DEVICE. OTTO J. BORK, Sun Prairie, Wis. Filed Nov. 6, 1925. Serial No. 67,414. 3 Claims. (Cl. 141—1.)

1. A washing device for the purpose set forth, comprising a container adapted to have water supplied thereto and further having its bottom formed with a plurality of openings, and a tapered tube secured in and extending from each of said openings and adapted

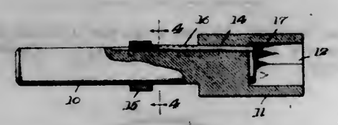


to have detachably mounted thereon the lead of a milking machine for the purpose of cleaning the lead on the supply of water to the container.

1,579,070. TRUSS. LUCIEN B. BOWIE, Philadelphia, Pa. Filed Oct. 7, 1921. Serial No. 506,114. 1 Claim. (Cl. 128—112.)

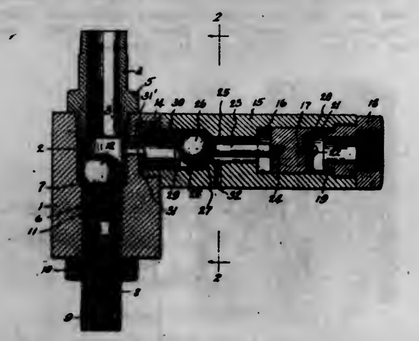
A truss comprising a pad having a substantially flat working face and a substantially annular flange extending backwardly from the edge of said face, said flange over a portion of its circumference being substantially perpendicular to the working face and over the remainder of its circumference being inclined inwardly, substantially as described.

1,579,071. METHOD OF AND APPARATUS FOR MAKING WIRE NAILS AND LIKE ARTICLES. EDWARD I. BRADDOCK, Winchester, Mass., assignor to Braddock Nail and Manufacturing Company, Cleveland, Ohio, a Corporation of Delaware. Filed Apr. 25, 1921. Serial No. 464,249. 45 Claims. (Cl. 10—54.)



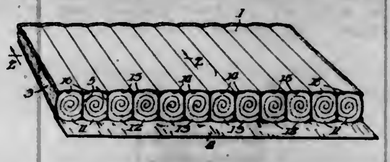
1. The method of making wire nails, which consists in compressing the ends of a wire blank in the direction of its length to form heads at the opposite ends thereof,

elongating the headed blank between its ends to form oppositely extended tapering portions between said heads, compressing the tapered blank substantially at right angles to the tapered portions to form opposing point-forming recesses substantially at right angles to said tapered portions, and severing said blank at said recessed portion.



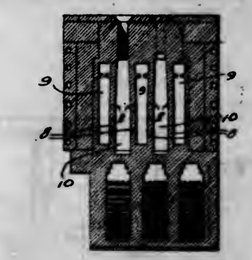
17. In an apparatus of the character described, in combination, a rotor having mechanism for providing a wire blank with heads at its opposite ends, a runway into which the headed wire blanks are deposited, means cooperating with the rotor for delivering the headed wire blanks into said runway, mechanism for elongating and tapering said headed wire blanks, means for feeding the headed wire blanks in said runway to said elongating and tapering mechanism, mechanism for compressing the tapered headed wire blank substantially at right angles to the tapered portions thereof, and mechanism for severing the tapered headed blanks at the compressed portions thereof.

1,579,072. ATTACHMENT FOR SOCKET WRENCHES. CHARLES W. BROUSE, Tyrone, Pa. Filed July 18, 1924. Serial No. 726,804. 1 Claim. (Cl. 81—124.1.)



In a device of the character described, an elongated shank terminating at one end in a head having a socket therein adapted for engagement upon a nut or bolt head, the head having a hole therethrough extending into the socket and the shank having a groove alining with said hole, and an ejector including a rod slidably mounted along said groove and through said hole and terminating at one end in a convolution located within the socket, and a collar slidably surrounding the shank and secured to the other end of the rod.

1,579,073. CONDENSATION DRAIN DEVICE. HARVEY LESTER BULLOCK, North White Plains, N. Y. Filed Apr. 13, 1925. Serial No. 22,825. 5 Claims. (Cl. 303—88.)

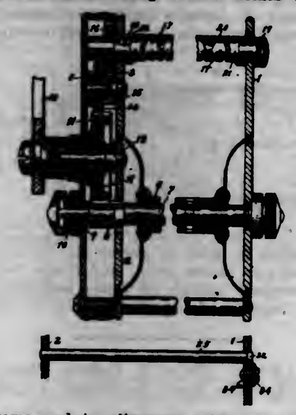


1. A device of the character described, including a cylinder, a piston in the cylinder operated by an air governor, a water accumulating chamber adapted to communicate with an air-tank, a valve in said chamber having two seats spaced apart, and said valve moved from one seat to the other by the action of the piston, and said device having a drain orifice back of the valve through which the water escapes.

1,579,074. MATTRESS. OLIVER M. BURTON, Chicago, Ill., assignor to Burton-Dixie Corporation, Chicago, Ill., a Corporation of Illinois. Filed Aug. 7, 1922. Serial No. 580,059. 4 Claims. (Cl. 5—361.)

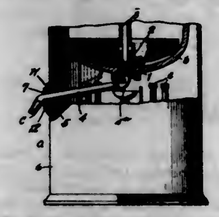
1. A mattress consisting of a fabric casing having spaced upper and lower walls connected at intervals by vertical division strips to form a row of narrow, transverse compartments extending throughout the length thereof, and separate filling charges in the compartments, each comprising a bat of felted cotton spirally wound into a solid cylindrical roll of sufficient cross section to fill compactly one of said compartments when compressed and confined therein, each charging roll being confined in position between the upper and lower casing walls and the adjacent division strips and vertically and laterally compressed thereby and by the adjacent rolls into substantially square cross section with flattened sides and rounded upper and lower surfaces, substantially as described.

1,579,075. HORIZONTAL COKE OVEN. HOWARD B. CARPENTER, Pueblo, Colo. Filed Oct. 18, 1921. Serial No. 508,552. 1 Claim. (Cl. 202—9.)



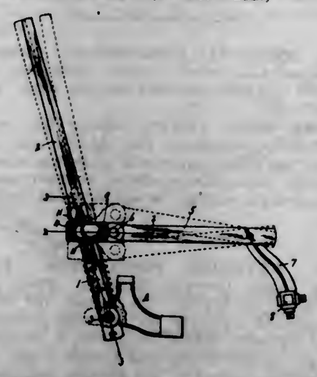
A coke oven structure comprising alternate coking retorts and vertical combustion flues, the walls of the lower portions of both the retorts and the combustion flues being parallel, and in each retort the upper portion of each wall common to the retort and the contiguous flues being inclined toward the middle vertical plane of the retort, and away from the said plane of said contiguous combustion flues, so that the lower portion of both retorts and combustion flues is a parallelepipedon, and the upper portion, a trapezoidal prism, the upper side of said prism being broader than the lower in the combustion flues and narrower in the retorts.

1,579,076. FISHING REEL. FRANCIS M. CASE, Cleveland, Ohio, assignor to The Enterprise Manufacturing Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 19, 1921, Serial No. 516,407. Renewed Dec. 10, 1925. 32 Claims. (Cl. 242—84.4.)



1. A fishing reel, comprising a frame including end plates, one of which has an opening, a rotatable spool,

a travelling line guide, and a bar along which said guide slides, said bar being located within the confines

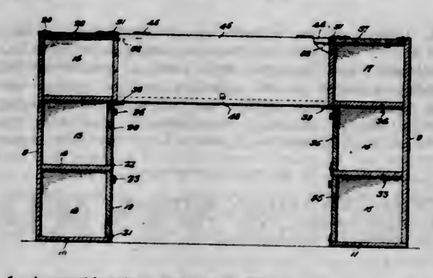


of the frame and in alignment with said opening and being removable from the reel by movement in one direction.

1,579,077. MELTING FURNACE. WILLIAM H. CHENOWITH and GEORGE C. SCHIMPF, Baltimore, Md., assignors to Harry D. Harvey, Baltimore, Md. Original application filed Nov. 8, 1924, Serial No. 748,675. Divided and this application filed June 22, 1925. Serial No. 38,742. 4 Claims. (Cl. 263—14.)

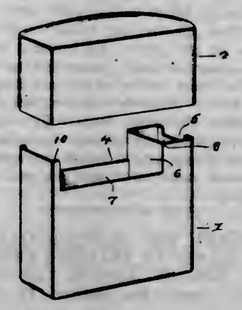
4. A melting furnace comprising a vertically extending casing having a cylindrical wall and having a horizontal slot in said wall, a melting pot in said casing, said pot having an outlet, and a spout swiveled to the pot at the outlet and extending through said slot.

1,579,078. PICKER MOTION FOR LOOMS. STEWART CHRISMAN, Waterloo, N. Y. Filed Dec. 8, 1924. Serial No. 754,628. 4 Claims. (Cl. 139—152.)



1. In a picker motion for looms, a picker-staff and an upright arm both fulcrumed to swing about one and the same axis, a lug-strap loosely embracing the picker-stick, an operating bar to which the lug-strap is pivoted for angular adjustment thereon, means for reciprocating said bar and lug-strap for oscillating the picker-staff, and a clamping plate pivoted to said bar and to the adjacent ends of the lug-strap coaxial with the axis of movement of the lug-strap and interlocking connections between said clamping plate and arm.

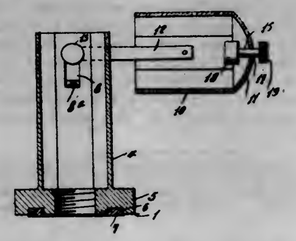
1,579,079. DUPLICATING WITH THE AID OF STENCILS. JOHN CLATWORTHY, Plumstead, England, assignor to D. Gestetner, Limited, London, England. Filed Mar. 29, 1924. Serial No. 702,999. 5 Claims. (Cl. 41—38.5.)



1. A combined stencil sheet for use in duplicating, comprising a sheet adapted to be stencilized by pressure and a hard-surfaced backing sheet coated on that portion of its surface which is in contact with the sheet adapted to be stencilized, with a composition containing a colouring matter adapted to be transferred to the sheet where pressure is applied thereto by the means operating to cut the stencil layer.

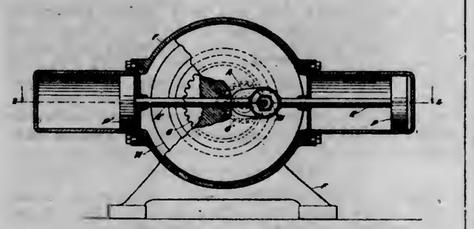
1,579,080. COMBINATION DESK AND FILING CABINET. GEORGE BOWEN CLEVELAND, Mobile, Ala. Filed May 20, 1925. Serial No. 31,627. 3 Claims. (Cl. 46—6.)

1. A combination desk and filing cabinet comprising pedestals having under filing spaces with lateral doors to give access thereto and upper file spaces with doors opening on the top of the pedestals, a desk structure supported between said cabinets having movable parts to give access to the lateral doors of the pedestals, keepers on the upper doors of the pedestals, and cover means for the desk engaging in closed position said keepers.



1,579,081. COMBINATION CASE. WESLEY N. COLEMAN, Jacksonville, Fla. Filed Sept. 8, 1923. Serial No. 661,663. 1 Claim. (Cl. 206—38.)

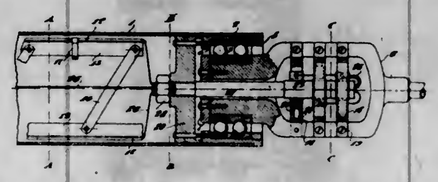
A case of the class described comprising a body having a partition therein dividing the same into a cigarette chamber and match chamber, the upper edges of the side walls of the first chamber being recessed, the recesses terminating at the partition and a slight distance from the end of the case so that this end is of channel shape in



cross section to form with the partition a grip for a package of cigarettes, the end of the body which forms a portion of the match chamber having a recess in its upper end and a bottom spaced from the bottom of the body and having a roughened portion for forming a striking surface, a top overlapping the body and covering the recesses and the striking surface when in position.

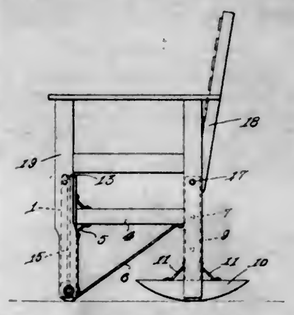
1,579,082. DUST CAP FOR AUTOMOBILES. CORNELIUS V. COLL and THOMAS A. COLL, Victor, Colo. Filed June 2, 1925. Serial No. 34,410. 6 Claims. (Cl. 152—12.)

1. A dust cap for a valve stem, comprising a retaining section adapted for threaded engagement with the valve stem and provided with slots, a closure section slidably mounted on the retaining section, springs carried by the closure section and entering the retaining section through the slots, and elements carried by the springs for frictional engagement with the valve stem.



1,579,083. MECHANICAL MOVEMENT. WALTER G. COLLINS, Glendale, Calif. Filed Mar. 24, 1922, Serial No. 546,298. Renewed Sept. 10, 1925. 1 Claim. (Cl. 74—14.)

In combination, a frame having open sides, plates closing the open sides, an annular collar formed on one of the inner sides of the plates, an internal ring gear secured to the collar, a shaft journaled in the collared plate, a fly-wheel fixed to the shaft and disposed within the frame, a pinion journaled eccentrically in the fly-wheel and within the area defined by the ring gear, cylinders fixed to the frame, pistons including rods movable through the frame, and a crank for operatively connecting the piston rods with said pinion.

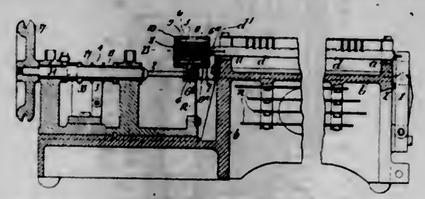


1,579,084. SYSTEM FOR ELECTRICALLY HEATING THE INK ROLLERS OF PRINTING PRESSES. LUIS CORNAZZANI, Remedios Escalada, Argentina. Filed Aug. 4, 1925. Serial No. 48,106. 10 Claims. (Cl. 101—348.)

3. An electrically-heated ink roller for printing presses comprising a metal tube having bearings at each end; a plurality of truss members in said tube; a coil of wire for each truss member, said coils being adapted to heat the tube when an electric current is traversing the coils; a fork-shaped member at one end of said tube comprising the bearing for that end of said tube and having a commutator; a tube secured to said metal tube and having a plurality of contacts adapted to cooperate with said commutator, said tube being adapted to support the

connecting wires in order to convey the electric current from the contacts to the coils; and means for forcing said truss members against the inside walls of the tube in order to facilitate heating.

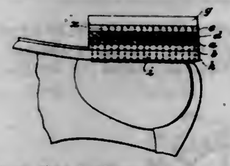
1,579,085. CHAIR. DAVID R. COTNER, Phoenix, Ariz. Filed Oct. 5, 1925. Serial No. 60,555. 1 Claim. (Cl. 155—57.)



In a device of the class described, a frame, including uprights, wheels supporting the uprights, bars extending rearwardly from the uprights, brace means between the bars and uprights, leg members pivotally secured to the rear of the bars, rocker shoes supporting the legs, brace means between the rockers and legs, a crank shaft journaled on the top portion of the standards, having its depending parallel arms extending toward but spaced away from the standards, and said arms terminating in outwardly directed threaded extensions, which latter are designed to be passed through the front legs of a chair or the like, and means for pivotally connecting the upper ends of the legs with the said chair or the like.

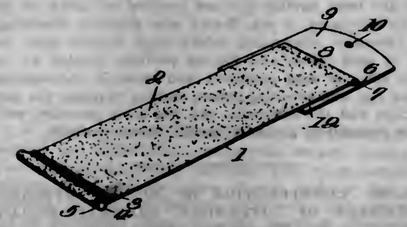
1,579,086. MEDICINAL COMPOSITION. GEORGE LOUIS COUSINEAU, Long Beach, Calif. Filed Dec. 8, 1924. Serial No. 754,665. Renewed Jan. 28, 1926. 2 Claims. (Cl. 167—7.)

2. A new medical product, suitable for hypodermic administration, containing the soluble and insoluble portions of the whole parathyroid gland comminuted to a substantially impalpable condition admixed with a vehicle comprising a solution of salt of about physiological strength.



1,579,087. KEYBOARD PERFORATOR. FREDERICK GEORGE CREED, Croydon, England. Filed June 27, 1922. Serial No. 571,261. 16 Claims. (Cl. 164—112.)

1. A keyboard perforator for punching perforations in a tape to represent letters, comprising a movable punch block, a die carried thereby and having a tape guideway therein, punches carried by and movable endways in said block and die, a stationary punch withdrawing device, a series of endways movable specially notched combination bars arranged in the paths of said punches, a resetting device adapted to move said combination bars into their forward operative positions, a series of keys, a series of key operated devices adapted to hold endways those combination bars that correspond to the fetters to be punched, tape feeding mechanism adapted to feed punched tape forward to a definite position after each punching or spacing operation, means adapted to move said resetting device into its operative and inoperative positions, means adapted to move said punch block

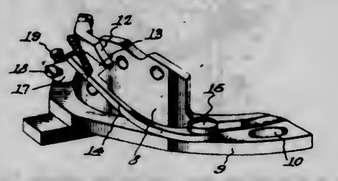


towards and from said combination bars, means adapted to actuate said tape feeding mechanism, and controlling means adapted to control the operation of the means used respectively for operating the resetting device, punch block and tape feeding mechanism, said controlling means being arranged to be brought into operation at each operation of one of said key operated devices, or the spacing key, and to be put out of operation automatically after the set of punching, tape feeding and bar resetting operations for producing a punched letter in the tape, or for forming a space on the tape, has been completed.

1,579,088. HEEL FOR BOOTS AND SHOES. WALTER CRICK, Hazelwood, England. Filed May 10, 1924. Serial No. 712,258. 6 Claims. (Cl. 36—35.)

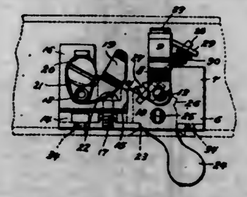
1. A boot or shoe heel comprising a resilient insertion consisting of two resilient layers cemented together and enclosed between non-resilient layers to which said resilient layers are attached.

1,579,089. SHOE-POLISHING CLOTH. JOHN A. DAVIDSON, Vancouver, British Columbia, Canada, assignor of one-half to Ira M. Cobe and Stuart C. Pratt, doing business as Cobe & Pratt, New York, N. Y. Filed Jan. 8, 1925. Serial No. 1,318. 2 Claims. (Cl. 15—222.)



1. A polisher of the character described comprising an elongated polishing cloth, having a hem at one end, a strip enclosed in the hem for forming a handle, and the opposite end of the cloth being attached to the intermediate portion of the covering, said covering being adapted to completely enclose the cloth when rolled on the handle.

1,579,090. PROCESS FOR THE TREATMENT OF MOLASSES AND SUGARY JUICES WITH A VIEW TO THE RECOVERY OF THE SUGAR. CAMILLE DEGUIDE, Enghien, France. Filed Nov. 3, 1925. Serial No. 66,684. 2 Claims. (Cl. 127—48.)

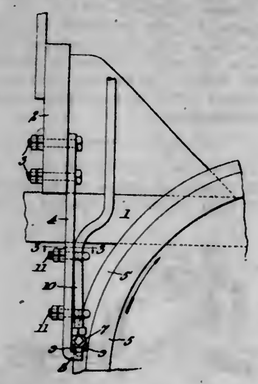


1. In a process for the treatment of molasses and sugary juices, with a view to the recovery of the sugar contained therein, the step consisting in precipitating and destroying the organic impurities contained in said molasses and sugary juices, by monobarytic silicate, before recovering the saccharose.

1,579,091. ADJUSTABLE DIVIDING CAM. WALTER L. DENSON and GEORGE E. BRUMITT, Spartanburg, S. C. Filed June 6, 1924. Serial No. 718,304. 1 Claim. (Cl. 66—54.)

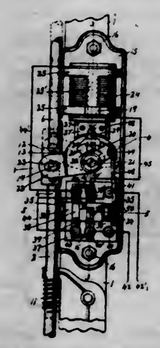
In combination with a machine head cylinder and needles carried thereby, a cam box supported by the machine head and having an inclined slot formed therein, a curved arm having an opening adjacent to one end thereof, a screw positioned in the opening for securing the arm in its positions of adjustment, a cam carried at the free end of the arm and adapted to extend through the slot, said cam adapted to engage needle butts of the machine, an extension forming a part of the arm and having a threaded opening, an adjusting screw extending through the extension and adapted to contact with the cam box to adjust the cam towards or away from the needle butts.

1,579,092. ELECTRIC SNAP SWITCH. FRANK C. DE REAMER, Bridgeport, Conn., assignor to General Electric Company, a Corporation of New York. Filed Mar. 4, 1924. Serial No. 696,889. 8 Claims. (Cl. 200—67.)



1. In an electric switch, the combination of a frame which is U-shaped in cross section and has high, low and intermediate side wall portions with shoulders between them, a body of insulation seated on the bottom of the frame between the low side walls and engaging a shoulder, fixed contacts on the body which extend toward said high portion, a contact arranged to bridge the fixed contacts, a lever which carries the bridging contact, and toggle means for actuating the lever, the movements of the lever and contact being limited in one direction by the high portion of the frame and in the opposite direction by the intermediate portion thereof.

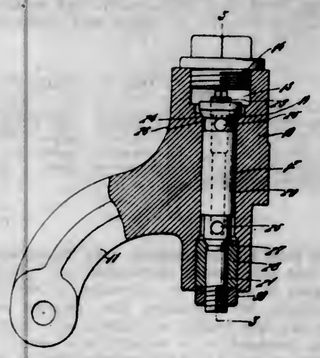
1,579,093. CAST OR MOLDED ARTICLES. FRANZIE ANTOINETTE DE SILVA, New York, N. Y. Filed Apr. 9, 1925. Serial No. 21,984. 4 Claims. (Cl. 49—77.5.)



1. A dense, extremely hard and practically unmeltable shaped article composed principally of titanic acid and other refractory materials such as titanium carbide.

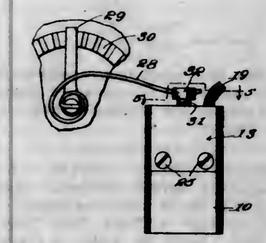
1,579,094. SUPPORTING AND POSITIONING MEANS FOR FLANGE-OILER PIPES AND NOZZLES. FRANK W. EDWARDS, Chicago, Ill. Filed Aug. 3, 1923. Serial No. 655,483. 7 Claims. (Cl. 184—3.)

2. In a supporting and positioning means for flange oiler pipes and nozzles, a bracket arranged to be supported in predetermined relation to a locomotive or other vehicle wheel, and a flange oiler nozzle having laterally extending bosses arranged on opposite sides thereof and provided with bracket contacting faces arranged at an angle to the center line of said nozzle for positioning said nozzle in predetermined relation to said wheel.



1,579,095. LATCH-LEVER LOCK. JOHN C. EDWARDS, Utica, N. Y. Filed May 1, 1924. Serial No. 710,285. 12 Claims. (Cl. 74—39.)

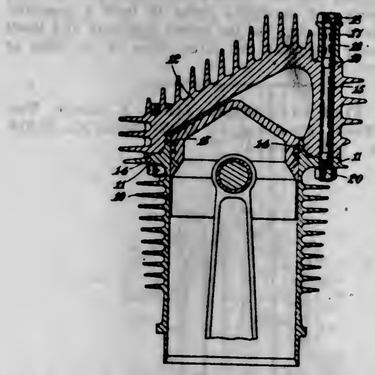
1. The combination with a latch lever and a latch operating member movable relatively thereto, of means for locking said member against movement to its latch-releasing position, and electrically operated means brought into action by a limited movement of said member toward its latch-releasing position for releasing the locking means when current is available in the electrically operated means.



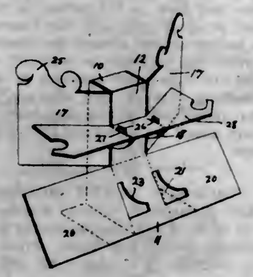
1,579,096. VALVE. JOHN ARTHUR ELLIOTT, Memphis, Tenn. Filed July 24, 1925. Serial No. 45,890. 3 Claims. (Cl. 251—23.)

3. In a foot valve for locomotive fire doors, an arm having a bore open at one end and having an outlet opening and an exhaust opening spaced inward from said end and having an inlet opening adjacent the opposite end of the casing, a beveled valve seat arranged within the bore and spaced inward from the inlet opening, a second beveled valve seat located within the bore between the outlet and exhaust openings, a valve member operating longitudinally within the bore and having a longitudinal passage therein and a lateral passage at each end of the longitudinal passage, said lateral passages opening outward into annular grooves extending around the valve member, a reduced portion at one end

of the valve member, a removable sleeve mounted upon the reduced portion of the valve member with the inner end of the sleeve forming one wall of the adjacent annular groove, a beveled shoulder at the inner end of the sleeve to engage the adjacent valve seat, a beveled shoulder at the opposite end of the valve member to engage the opposite valve seat and means to hold the sleeve in position.



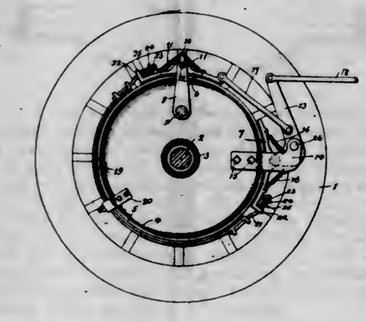
1,579,097. COMMUTATOR AND SLIP-RING BRUSH SHUNT CONNECTION. HARRY H. ERDMAN, Ridgway, Pa. Filed Apr. 14, 1925. Serial No. 23,155. 5 Claims. (Cl. 171—326.)



2. In a commutator and slip ring brush structure, a block-like body having one end portion cut away to define an extension, a cap having arm portions straddling said extension, conducting cables, clips secured upon the ends of said cables and having portions located at opposite sides of said extension and clamped thereagainst by the cap, and securing means passing through the cap, the clips and the extension, the cap being provided with means engaged by and holding the cables separated.

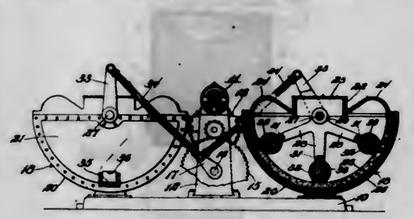
1,579,098. CONSTRUCTION OF JOINT COMPRISING MEMBERS OF DIFFERENT THERMAL EXPANSIONS. ALFRED HUBERT ROY FEDDEN, Bristol, England, assignor to The Bristol Aeroplane Company, Limited, Bristol, England, a British Company. Filed Sept. 30, 1925. Serial No. 59,646. 5 Claims. (Cl. 123—196.)

1. In a structure which is to be subjected to temperature variations, the combination with a part which, although liable to thermal expansion, is required to be tightly held at all times between an abutment and a clamping-device secured thereto, which clamping-device has a coefficient of thermal expansion different from that of the said part, of a third element which constitutes a part of the effective length of the clamp and is selected as to its dimensions and coefficient of thermal expansion relatively to the dimensions and coefficients of the said part and clamp, so that the relative movement of the clamping faces with change of temperature is substantially equal to the expansion of the said part that they grip.



1,579,099. DISPLAY STAND. GEORGE W. FERNSTROM, Washington, D. C. Filed Aug. 17, 1925. Serial No. 50,774. 8 Claims. (Cl. 211—24.)

1. A display stand formed from a single sheet of material and comprising a supporting column having an upwardly and rearwardly inclined face, wings extending laterally from opposite edges of said inclined face and combined article supporting brackets and securing tongues extending from the side walls of the column through the panel.



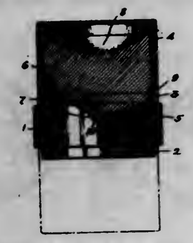
1,579,100. BRAKE. WILLIAM FRASER, Dobbs Ferry, N. Y. Filed Aug. 25, 1925. Serial No. 52,428. 3 Claims. (Cl. 188—77.)

1. In combination with a brake drum and brake housing, a pair of brake shoes, an arm pivotally connecting one of said brake shoes to the brake housing, a bell crank lever pivotally connected to the brake housing and having its shorter end pivotally connected to the other

of said brake shoes, and a link connecting the longer arm of said bell crank lever with the first-mentioned brake shoe.

1,579,101. RUBBING OR KNEADING MACHINE. JACOB FRIEDMAN, New York, N. Y. Filed Aug. 7, 1924. Serial No. 730,753. 2 Claims. (Cl. 83—45.)

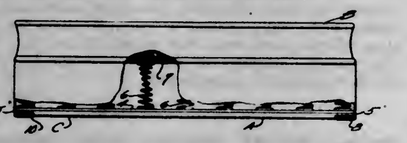
1. A machine of the character described comprising a stationary tank having straight sides and a semi-circular bottom, a shaft extending across the tank concentric to the semi-circular bottom, a plurality of pairs of radially directed arms mounted upon the shaft and extending into the tank, each arm carrying a roller at its end substantially contacting with the bottom of the tank, each roller having a length slightly less than the width of the tank, springs yieldingly supporting the rollers on the outer ends of the arms, a cover over the top of the tank and the cover at the ends of the tank being vertically extended and then extending downward and toward the middle of the tank, and motor operated means for oscillating the shaft to carry the rollers up into said vertically extended portions of the cover to thereby give a slap to the material being treated.



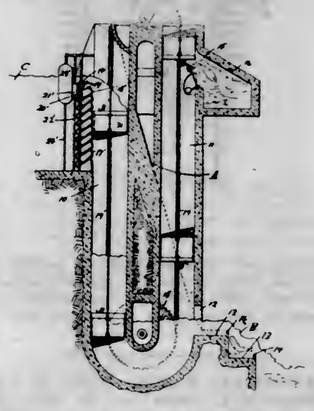
1,579,102. ROTARY CUTTING TOOL. CHARLES E. GALE, Weymouth, Mass., assignor, by mesne assignments, to Greenfield Tap and Die Corporation, Greenfield, Mass., a Corporation of Massachusetts. Filed Dec. 4, 1923. Serial No. 678,477. 13 Claims. (Cl. 77—75.5.)

8. A rotary cutting tool comprising a body provided with grooves having their bottoms inclined with respect to the axis; blades arranged in sets, spaced longitudi-

nally, slidably engaging in said grooves, whereby, on sliding longitudinally their cutting edges progress also radially of said body; and an intermediate spacing member whose length is variable, between the successive sets, thereby to vary the relative radial settings of the said sets.

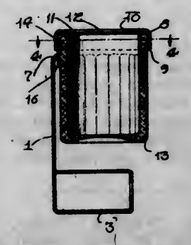


1,579,103. SHAVING UNIT. GILBERT WESTCOTT GEROW, Vail Gate, N. Y. Filed Nov. 25, 1924. Serial No. 752,171. 3 Claims. (Cl. 206—56.)



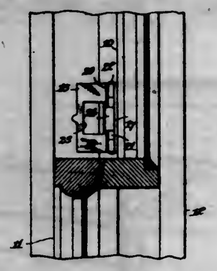
1. A soap holder including a block, oppositely facing reduced circular extensions of equal diameter integral with the block, one of said extensions being hollow, said block having a concavity therein within said hollow extension, adapted to support a cake of soap, a cylindrical cap member the open end of which is adapted to be optionally fitted over either of said extensions to enclose a cake of soap on the block or to provide a support for the block.

1,579,104. VERMINPROOF MATTRESS. ALBERT A. GRANOVSKY, New York, N. Y. Filed Oct. 7, 1924. Serial No. 742,209. 1 Claim. (Cl. 5—351.)



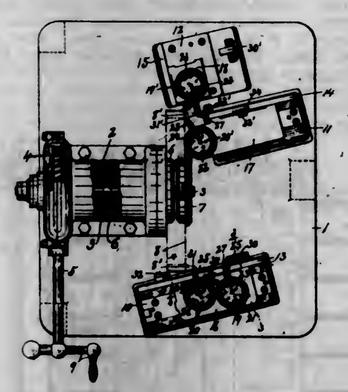
A vermin proof box bed-spring construction comprising an open rectangular bottom frame having a smooth unbroken bottom face; a series of cross-slats extending crosswise of said frame and secured relatively thereto leaving the bottom face of said frame as an unbroken smooth surface; a top mattress portion spaced apart from said slats; compression springs reacting between said slats and said mattress portion; a vermin tight cover of ticking covering said mattress portion, the sides of the structure and overlapping a portion of the said unbroken bottom face of said frame with its margin secured thereto; a bottom cover of ticking stretched across the opening of said frame and having its margin overlapping a portion of said bottom face of said frame and being secured thereto; a combination supporting strip and vermin seal overlapping both the margin of said cover of ticking and said bottom cover forming a vermin seal therewith and extending down to form a mechanically resistant support for the entire structure and itself located wholly inside of the outer edges of the sides of the structure.

1,579,105. FISH ELEVATOR. JAMES A. GREEN, Vancouver, Wash. Filed Aug. 31, 1925. Serial No. 53,616. 4 Claims. (Cl. 61—21.)



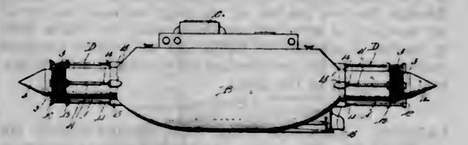
1. In combination, a hollow dam like structure having upper and lower openings on the low level side of the stream, an endless elevator operating within said structure and including spaced buckets, each bucket having a pivoted cover and open at its bottom to receive the fish entering said structure through the lowermost opening, and as the bucket passes around the lower end of said structure, means for opening the cover of each bucket as it approaches the uppermost opening, to allow said fish to pass therefrom through said opening, and a tunnel adjacent the upper end of said structure whereby said fish may move about the structure to the high level side of the stream.

1,579,106. COMBINED MATCH HOLDER AND ASH RECEIVER. SAMUEL E. GUINN, Johnson City, Tenn., assignor to S. E. Guinn Manufacturing Co., Cincinnati, Ohio, a Corporation of New York. Filed Oct. 30, 1924. Serial No. 746,881. 2 Claims. (Cl. 206—20.)



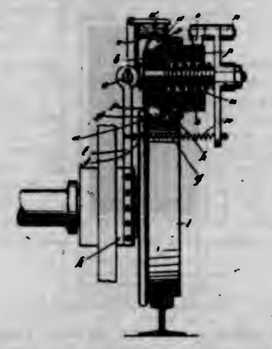
1. A frame structure, comprising an upright plane portion formed at the lower end to provide a rectangular box-like structure arranged wholly in advance of the upright portion and open at both ends, a circular member secured to the upper end of the upright portion and arranged wholly in advance of the same, said circular member including an upper flange and a vertical wall, the vertical wall being formed with means to support an open ended ash receiver, the edge of which is disposed beneath the upper flange.

1,579,107. LOCKING DEVICE. FRANK LUTHER HANLE, Arlington, N. J. Filed Apr. 11, 1925. Serial No. 22,393. 2 Claims. (Cl. 70—14.)



1. A device comprising an attaching plate, an obstructor hingedly connected to said attaching plate, and locking means carried by the attaching plate for locking said obstructor in an obstructing position, said obstructor having an opening therein to accommodate a part of the locking means and thus permit the obstructor to be disposed in an unobstructing position.

1,579,108. APPARATUS FOR TESTING THE ACCURACY OF GEAR-TEETH CUTTERS. CLARENCE I. HARTER, Syracuse, N. Y. Filed Sept. 20, 1921. Serial No. 501,872. 7 Claims. (Cl. 33—174.)



1. In a device for testing the cutting angle of the cutting edges of gear cutters, a support for the cutter, a guide disposed at an angle to the axis of the cutter, a carrier movable along the guide, a contact member movable with said carrier and having an independent movement transversely of the guide for engaging one of the cutting edges of the cutting teeth as the carrier is moved along the guide, and means actuated by said contact member for indicating the amount of any irregularity or deviation of said cutting edge from the required contour and angle.

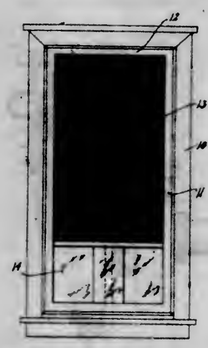
1,579,109. DISPLACEMENT-VARYING MEANS. JONAS J. HASELEY, Sanborn, N. Y. Filed Apr. 27, 1925. Serial No. 26,201. 3 Claims. (Cl. 114—16.)

1. In a ship sustained by displacement of fluid; a displacement varying device comprising a cylinder stationarily carried by the body of the ship, said cylinder having an open outer end, a slidable cylinder telescopically engaged with the stationary cylinder and having an open inner end and a closed outer end, sealing means preventing entrance of surrounding fluid into the cylinders, said sealing means comprising flexible sleeves disposed one around and one within said cylinders, the ends of said sleeves being secured to the stationary and slidable cylinders respectively, and means for sliding the slidable cylinders either outwardly or inwardly.

1,579,110. LUBRICATOR FOR THE WHEEL FLANGES OF RAIL VEHICLES. ALBERT HEUSER, Stuttgart, Germany. Filed Oct. 29, 1925. Serial No. 65,695. 10 Claims. (Cl. 184—3.)

1. A vehicle wheel lubricator, comprising a series of balls arranged in an arcuate row; means for supplying lubricant to the balls; and means for bringing the balls successively into operative engagement with the tread of a wheel to be lubricated.

1,579,111. MOISTENER. JAMES R. HINKSON, Brooklyn, N. Y., assignor to Louise Marie Strunck, Kings County, N. Y. Filed Apr. 11, 1925. Serial No. 22,462. 1 Claim. (Cl. 299—24.)



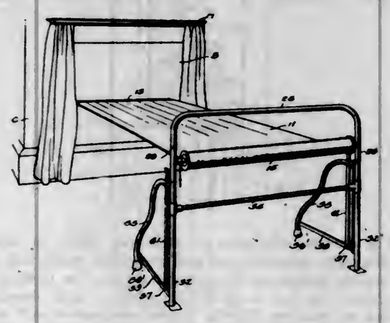
A moistener comprising a hollow body open at each end, and traps which combine respectively with the opposite ends of the body, each trap comprising a cap removably attached to its related end of the body, a tubular member extending laterally from one side of the end

portion of the cap so as to be disposed internally of the hollow body when the cap is attached, said tubular member being of smaller diameter than the internal diameter of the hollow body, said tubular member being opened through the end portion of the cap, the caps and tubular members as attached combining with the hollow body to confine a quantity of liquid and to liberate moisture resulting from the evaporation of the liquid and to prevent the egress of the liquid.

1,579,112. PROCESS FOR THE PRODUCTION OF ARTICLES OF THE PHENOL-FORMALDEHYDE CONDENSATION-PRODUCT TYPE. WILLIAM HUNTER, Edinburgh, and JOHN GUNTER FAIRGRIEVE, Uddingston, Scotland, assignors to William Tod Junior and Company (1923) Limited, Polton, Midlothian, Scotland, a British Company. Filed May 14, 1924. Serial No. 713,318. 13 Claims. (Cl. 106—22.)

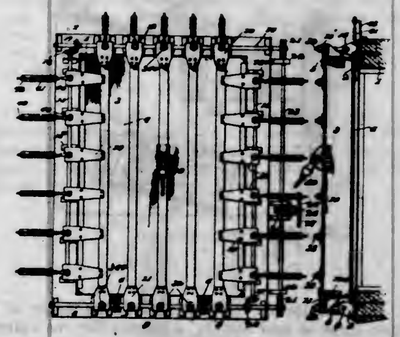
1. The process for the production of articles of use from phenol aldehyde condensation products which consists in carrying out condensation between substances of phenolic character and substances of aldehydic character, in the presence of solid celluiosic materials containing substantial amounts of oxy-cellulose and containing lime and chlorine in the form of hypochlorites.

1,579,113. SCREEN. CARL JOHAN JACKSON, Superior, Wis. Filed Dec. 3, 1924. Serial No. 753,724. 1 Claim. (Cl. 156—37.)



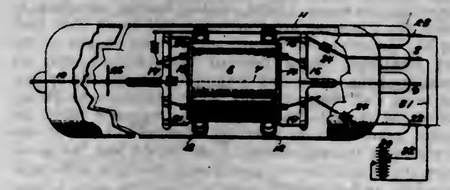
A window screen exit of the character described comprising a frame member partitioned into screen and exit portions respectively, the exit portion including a pair of transparent panels secured in end to end relation within the frame and having their inner edges arranged in spaced relation in providing an exit therebetween, and a relatively narrow transparent panel positioned directly behind the exit and in spaced relation thereto whereby an exit and window ventilator is provided.

1,579,114. HEEL. LOUIS KAPLAN, New York, N. Y. Filed Aug. 29, 1923. Serial No. 659,930. 1 Claim. (Cl. 36—40.)



A heel having a recess at the bottom thereof and a depending flange surrounding said recess, a tread lift of cushioning material having an upper portion of reduced area fitted in said recess, a plate embedded in said lift and bearing against the lower edge of said flange, and a screw bearing against said plate and engaging the heel to secure the plate and lift to the heel, said heel having an integral stud depending from within said recess to the lower surface of the lift to resist wear of the lift, the lift and plate having an opening receiving said stud to prevent the turning movement of the lift and plate around said screw.

1,579,115. BED. EDWARD PERCY KEBBE, Newton, Mass.; Irene K. Bailey, executrix of said Kebbe, deceased, assignor to Everett B. Kebbe, Everett, Mass. Filed Oct. 23, 1923. Serial No. 670,310. 6 Claims. (Cl. 5—1.)



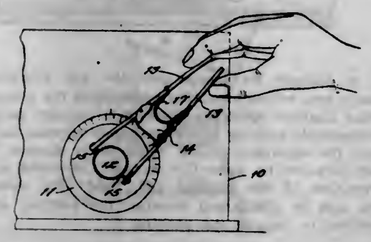
1. In a folding bed, a folding foot section, a roller carried thereby and upon which the bed bottom is adapted to be rolled, swinging legs for supporting the foot section in operative position, and means for anchoring said foot section in operative position.

1,579,116. DOOR-OPERATING MECHANISM FOR RETORTS. AUGUSTUS KEMPKEY, San Francisco, Calif., assignor to F. K. Fish, Jr., Reno, Nev. Filed Nov. 5, 1920, Serial No. 422,096. Renewed Sept. 3, 1925. 11 Claims. (Cl. 292—5.)

1. In combination, a door, a frame adjacent the door, a series of catches on each of the edges of the door, a series of latches on the frame, and means for imparting to all of the latches a tilting movement and subsequently a lengthwise movement to cause the latches to engage and bind the catches and move the door in sealing position against the frame.

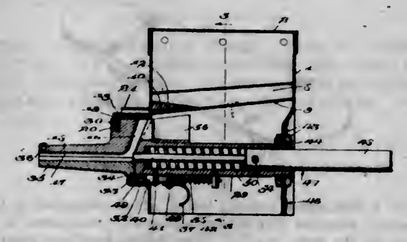
1,579,117. ELECTRON-DISCHARGE DEVICE. KENNETH H. KINGDON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 1, 1921. Serial No. 481,975. 12 Claims. (Cl. 250—27.)

1. A device comprising an evacuated container, an electron-emitting cathode and an anode geometrically so shaped and so related to said cathode that positive ions produced in the space between said electrodes are accumulated in said space thereby causing a current between said electrode to vary with variations of applied voltage at a materially higher rate than would be characteristic of said device in the absence of an accumulation of positive ions in the discharge space between said electrodes.



6. An electron discharge device comprising a sealed envelope, electron-emitting cathode, a cylindrical anode enclosing said cathode, and means for preventing the escape of positive ions from the space within said cylinder.

1,579,118. ELECTRODE END CAP. ERNST KLEINMANN, Berlin, Germany. Filed Apr. 20, 1925. Serial No. 24,617. 2 Claims. (Cl. 136—121.)

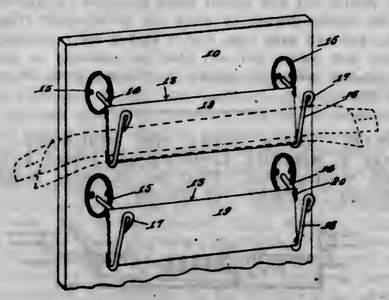


2. As a new article of manufacture, a cap for electrodes comprising a cylindrical body open at one end and closed at the other, the open end of the body being provided with a downwardly and outwardly extending flange terminating in a bordered rim as and for the purpose set forth.

1,579,119. KNOB ATTACHMENT. FREDERICK W. KLOSS, Philadelphia, Pa. Filed May 18, 1925. Serial No. 31,197. 4 Claims. (Cl. 74—33.)

1. A knob attachment for use upon radio sets and the like comprising a pair of relatively flat bars having pointed pins extending inwardly from the inner sides and adjacent the ends thereof, a substantially U-shaped relatively flat spring having its flat side rigidly secured to the inner sides of the bars and adjacent the pointed pins in order that these pins will be tensioned relatively.

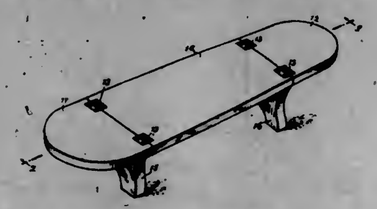
1,579,120. TACK DRIVER. EDWARD JOSEPH KRAMER, Green Bay, Wis. Filed Feb. 25, 1925. Serial No. 11,549. 4 Claims. (Cl. 1—5.)



4. In combination with the barrel of a tack setting device, a tack chuck comprising a nozzle and lug fixedly carried by the barrel, a gate movably carried by the nozzle being swingable into contact with the nozzle and lug to complete the nozzle, a spring latch operable through the lug to secure the gate when closed, and means carried by the barrel assisting in the support of the latch.

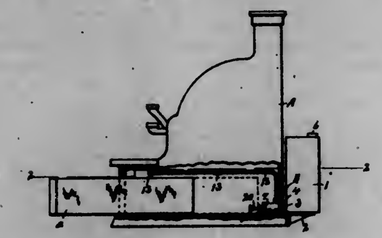
1,579,121. PRODUCING FAST DYEINGS ON WOOL. HANS KRZIKALLA and HANS KÄMMERER, Mannheim, and JOSEPH NÜSSLEIN, Ludwigshafen-on-the-Rhine, Germany, assignors to Badische Anilin & Soda-Fabrik, Ludwigshafen-on-the-Rhine, Germany, a Corporation of Germany. Filed Aug. 3, 1925. Serial No. 47,969. 2 Claims. (Cl. 250—27.)

1. The process of producing fast dyeings on animal fibre which consists in producing difficultly or not soluble azo dyestuffs in the animal fibre by charging the same with a sulfonated component that can be coupled and acting on the charged fibre with a diazo compound.



2. The process of producing fast dyeings on animal fibres which consists in charging the fibre with a sulfonated naphthalene derivative and acting on it with a diazo compound, the naphthalene and diazo compounds being so chosen that the azo dyestuff products by their interaction is poor in sulfonic acid groups.

1,579,122. COLLAR-SORTING RACK. FRED C. LACKMAN, Asheville, N. C. Filed Sept. 23, 1924. Serial No. 739,414. 1 Claim. (Cl. 211—14.)

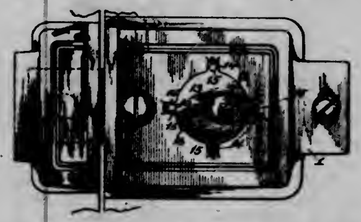


A collar sorting device for use in laundries comprising an easel-like rigid support, and a plurality of vertically spaced racks mounted thereon, each rack including a pair of horizontally spaced members secured to the support and formed as V-shaped arms, the forward arms diverging upwardly away from the rear arms and constituting retaining means, and a plate member connecting the rear arms.

1,579,123. COLLAPSIBLE IRONING BOARD. MARTHA F. MCCABE, Brooklyn, N. Y. Filed June 30, 1925. Serial No. 40,650. 3 Claims. (Cl. 68—10.)

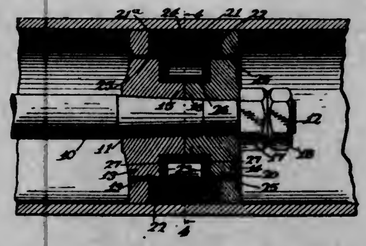
1. A collapsible ironing board which comprises a body portion, foldable end portions pivotally connected to the ends of the body portion, foldable leg portions pivotally connected to the ends of the body portion, and means on the leg portions and the end portions for causing an interlocking action between these portions to hold the parts in a rigid condition when operatively arranged.

1,579,124. DISINFECTING ATTACHMENT FOR MONEY DRAWERS. HAROLD FAULDER MACGRATH, Syracuse, N. Y. Filed Sept. 27, 1923. Serial No. 665,164. 1 Claim. (Cl. 133—11.)



The combination with a case having a money drawer slidable therein, of a piston pump mounted in the case at the rear of the money drawer and provided with a piston rod projecting into the path of movement of said money drawer, a reservoir connected to the pump for supplying a disinfecting liquid thereto, a check valve controlling communication between the pump and reservoir; a discharge pipe leading from the pump across the open top of the money drawer when the latter is closed, said piston rod and piston being actuated by the closing of the money drawer to force the disinfectant from the pump through said pipe, and a spring for retracting the piston and piston rod and also for assisting in opening the drawer when the latter is released from its closed position.

1,579,125. STOCK GUARD FOR ROADWAYS. WILLIAM R. MARSHALL, Lewisburg, and JOSEPH E. LOCKETT, Stanton, Tenn. Filed Dec. 12, 1923. Serial No. 680,284. 1 Claim. (Cl. 39—6.)

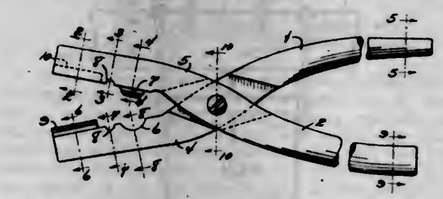


A stock guard for the purpose set forth, comprising spaced beams arranged transversely on a roadway, each of said beams having a central longitudinal depressed portion, fixed guard rails having pointed edges extending from the elevated portions of the beams, brace plates having angle ends secured to the beveled edges of the said fixed rails, boards providing wheel ways secured in the depressed portions at the ends thereof, equi-distantly spaced guard rails, each comprising a substantially rectangular member which is hingedly secured to the beams in the depressed portions thereof, each of said last mentioned guard rails having one of its outer corners beveled, angle plates secured to the ends of the last mentioned rails, each of said plates having an outwardly projecting trunnion, plates having bearing openings in which the trunnions are received, a bell crank lever having an elongated slot therethrough, a pin on one of the last mentioned plates received through said slot, an operating lever, and a link connection between the operating lever and the bell crank lever, whereby the swinging of the operating lever will simultaneously move the hinged guard rails to a vertical position to permit one of the edges thereof resting on the beams, and the movement of the said lever in an opposite direction will simultaneously swing the said rails to cause the same to rest horizontally on the said depressed portions of the beams.

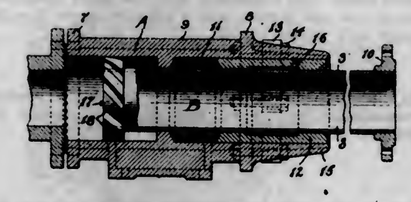
1,579,126. LOCK. MAXWELL C. MAXWELL, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Sept. 7, 1923. Serial No. 661,487. 4 Claims. (Cl. 70—46.)

1. In a lock structure, the combination of a housing, a cylinder lock enclosed by said housing, and armor pins located in the wall of the housing substantially parallel with the axis of the cylinder lock.

1,579,127. EXPANSIBLE PACKER FOR PLUNGERS. ERWIN E. MILLER, Fullerton, Calif. Filed June 12, 1925. Serial No. 36,671. 13 Claims. (Cl. 74—109.)



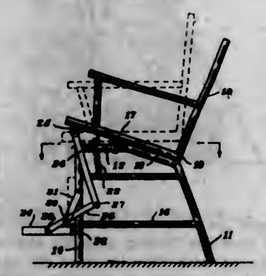
1. A plunger for pumps and the like comprising a plunger rod, means providing heads upon the plunger rod having annular shoulders upon their opposed faces, and an expansible packing loosely mounted between the heads about the shoulders, there being ports formed in the heads terminating upon the shoulders whereby upon reciprocation of the plunger rod, fluid may enter said ports and be discharged between the packing and the shoulders to expand the packing.



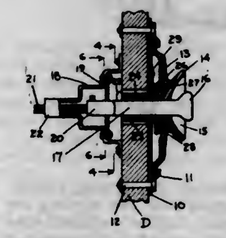
1,579,128. TOOL. NOAH SAMUEL MIZELL, Bartow, Fla. Filed Oct. 26, 1925. Serial No. 64,987. 1 Claim. (Cl. 86—22.)

A tool for the purpose set forth comprising two handle members having their confronting faces reduced at points throughout the length thereof and said reduced portions

being disposed in lapping relation and pivotally connected, said handles being round in cross section and gradually reduced in size from their pivoted to their outer ends, each of said handles merging, beyond their pivots, into jaws which are arranged angularly with respect to the handles, the inner faces of the jaws being straight, said jaws approximately in the center thereof having transversely arranged aligning semi-circular depressions, and one of the jaws inward of the said depression thereof having a rounded concavity, the opposite jaw having a knife blade to be received in the concavity, said last mentioned jaw having a slot entering from the outer end thereof and the first mentioned jaw having its inner face provided with a removable blade to be received in the mentioned slot, all as and for the purpose set forth.

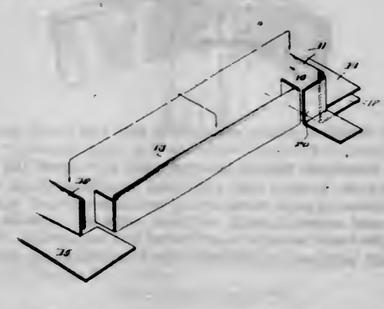


1,579,129. EXPANSION JOINT. GEORGE F. MURPHY, Philadelphia, Pa. Filed Dec. 23, 1925. Serial No. 77,255. 6 Claims. (Cl. 285—162.)



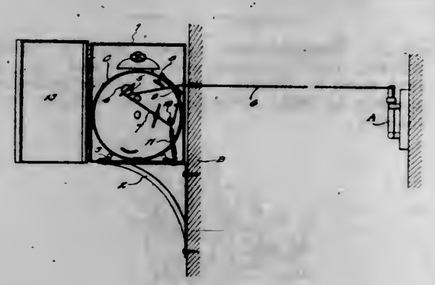
1. An expansion joint comprising a casing, a pipe telescopic in the casing, a stuffing box joint and gland therefor, said gland having means intermediate its ends for adjustable attachment to the casing and having its free end bearing on the pipe well beyond said means, and a support for the free end of the gland.

1,579,130. REST CHAIR. WILLIAM MURRAY, Philadelphia, Pa. Filed July 14, 1923. Serial No. 651,554. 2 Claims. (Cl. 155—171.)



1. A chair comprising a base including front and rear legs, cross braces for said legs, a seat portion pivoted intermediate its ends to said base, a foot rest hingedly secured to one of said cross braces and being disposed adjacent the lower portion of the front legs, a lever having one end pivoted to said foot rest, a bar pivoted at one end to one of said front legs and at its opposite end to said lever intermediate the ends thereof and a link pivoted to the opposite end of said lever and to the front end of said seat whereby the foot rest will be moved simultaneously with the movement of the pivoted seat.

1,579,131. COMBINATION LOCK. NOAH N. NEHER, Whittier, Calif. Original application filed Apr. 12, 1923, Serial No. 631,572. Divided and this application filed Mar. 18, 1925. Serial No. 16,381. 5 Claims. (Cl. 70—53.)

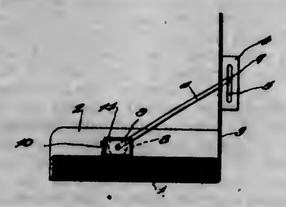


1. A combination lock comprising a slidable, but not rotatable, plunger having a projection formed thereon, a disc rotatable about said plunger, and a sleeve disposed about said plunger and having a bayonet slot formed therein capable of receiving said projection so as to permit movement of the plunger and to lock the plunger in moved position, said sleeve being actuated by said disc.

1,579,132. ROOF-WINDOW CONSTRUCTION. DAVID J. NELSON, Mediapolis, Iowa. Filed Jan. 2, 1923. Serial No. 610,323. 1 Claim. (Cl. 108—16.)

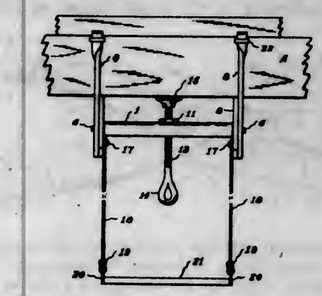
In a roof window frame construction, a rectangular frame including similar side members and top and bottom members connected therewith, the top member being formed from a single sheet of resilient material cut transversely near its ends and bent longitudinally between the cut and rebent to define an upstanding inverted channel portion, the ends being bent laterally and being formed with extensions extending at right angles to the laterally bent ends, the bottom member being similarly formed from a single sheet of resilient material cut transversely near its ends and bent longitudinally between said cuts and rebent to define an upstanding inverted channel shaped portion, the sheet of the top member being adapted for disposition beneath the shingles at the top of the window opening and the sheet of the bottom member being adapted for disposition upon the top of the shingles at the bottom of the window opening, the sides of the frame each being formed from a single sheet of material bent into channel shape corresponding to the channel shaped portions of the top and bottom members and terminating in right angularly extending tongues received slidably within the first and second named channel members.

1,579,133. SWITCH CONTROL. ARNOLD C. NEWSOM and ZED CONLEY, Leatha, Ky. Filed May 5, 1924. Serial No. 711,202. 1 Claim. (Cl. 161—1.)



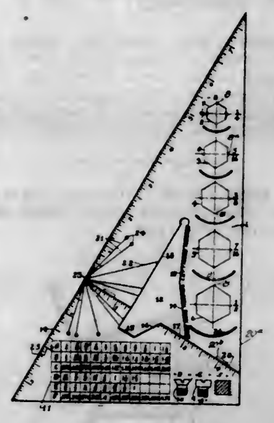
Means for opening an electric switch, comprising a clock, a reel formed with the winding key of the alarm mechanism thereof, a cable connected with said reel and with the switch, a second cable connected with the reel and with the alarm control lever of the clock, a spring connected with the stationary part and a pulley on the spring and engaging the second cable for holding the same taut.

1,579,134. WINDOW CORNICE. ARTHUR LEON NUSBAUM, Baltimore, Md. Filed Oct. 20, 1925. Serial No. 63,736. 3 Claims. (Cl. 156—13.)



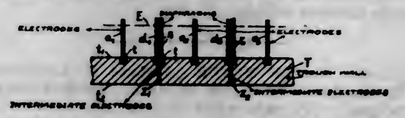
1. A window cornice comprising side and front moulding pieces, and corner blocks having right angularly opposed shoulders thereon and adapted to receive the adjacent ends of said side and front moulding pieces, the outer faces of said blocks being ornamented, and fastening means passed through the inner sides of the shoulders from the inner sides of said blocks into engagement with adjacent portions of said side and front moulding pieces.

1,579,135. NEWSPAPER HOLDER. GILBERT OLSON, Joliet, Ill. Filed June 13, 1925. Serial No. 36,916. 3 Claims. (Cl. 129—26.)



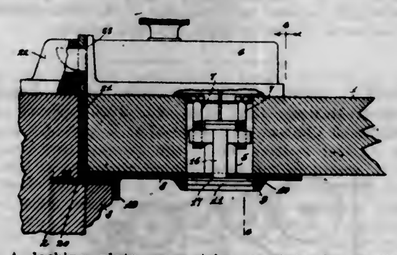
1. A newspaper holder including a receptacle open at one side, a back extending upwardly at the other side, right angularly disposed ears carried by the back having longitudinal slots therein, a frame member having adjustable connection with the slots and weighted members carried by the frame and disposed within said receptacle.

1,579,136. INDOOR SWING. WALTER R. PAXSON, Glenside, Pa., assignor to Standard Pressed Steel Company, Jenkintown, Pa. Filed July 30, 1923. Serial No. 654,738. 1 Claim. (Cl. 155—68.)



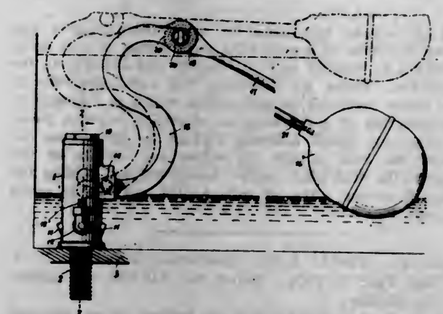
In a device of the character described, a cross bar of channel cross section, said bar being provided with end walls and with integral downwardly directed ears spaced away from said end walls, pairs of tongs at the ends of the bar, pivot members extending through the respective tongs and secured through the end walls and ears of said bar, a nipple extending through the web portion of the bar centrally thereof, securing nuts threaded on said nipple and contacting with the upper and lower faces of said web portion, and a pressure screw threaded through said nipple.

1,579,137. DRAFTING TRIANGLE. JOSEPH S. PECKER, Philadelphia, Pa. Filed Mar. 5, 1924. Serial No. 697,008. 6 Claims. (Cl. 33—104.)



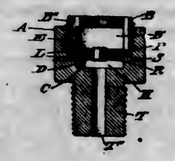
1. A device of the class described provided with a series of hexagonal openings having opposite angles located in vertical alignment with the center of the openings, said device being also provided at opposite vertical sides of the openings with notches located in horizontal alignment with the centers of the openings, said triangle being also provided with arcuate slots associated with the said openings and located at different distances from the same to indicate limitations of interference of other parts of a machine so that a wrench or other tool may be used without interference on a screw head or nut.

1,579,138. ELECTROLYTIC CELL. FRANZ PETZ, Nuremberg, Germany, assignor to Elektrizitäts-Aktiengesellschaft Vormals Schuckert & Co., Nuremberg, Germany, a German Corporation. Filed July 18, 1924. Serial No. 726,916. 7 Claims. (Cl. 204—5.)



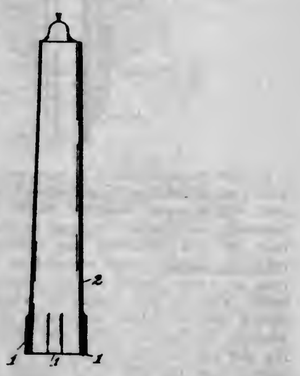
1. In an electrolytic cell in combination, a trough partly consisting of cement and adapted to contain an electrolyte, a series of plate shaped working electrodes in said trough spaced a suitable distance apart, each plate contacting with the trough bottom and with two opposite side walls thereof, means for connecting a current source to the first and the last working electrode, means for collecting and removing the gases forming at the working electrodes, and a series of intermediate electrodes embedded in the trough bottom and in said opposite side walls, and being suitably spaced with relation to said working electrodes so that at least one intermediate electrode is disposed between each adjacent part of working electrodes.

1,579,139. LOCKING PLATE FOR CYLINDER LOCKS. JAMES E. PHILLIPS, New York, N. Y. Filed Apr. 16, 1925. Serial No. 23,601. 4 Claims. (Cl. 70—16.)



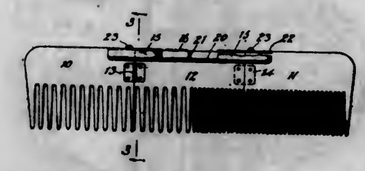
1. A locking plate, comprising a plate for receiving and holding against rotation a cylinder lock, means presenting a flange overlapping the jamb strip when the plate is in use, said plate being also formed with an edge extending to near the jamb whereby the plate cannot be rotated.

1,579,140. BALL COCK. JULIUS PHILLIPS, Trenton, N. J., assignor to The Luzerne Rubber Company, Trenton, N. J., a Corporation of New Jersey. Filed June 14, 1924. Serial No. 720,087. 8 Claims. (Cl. 137—104.)



1. A ball cock for water closet flush tanks comprising a valve, a float for controlling the operation of said valve and an operating connection between said float and valve constituted of rigid members at least one of which is made of sound dampening substance.

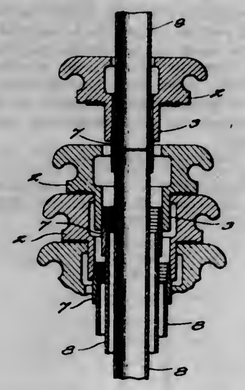
1,579,141. SAFETY PRESSURE-RELIEVING DEVICE. RAYMOND C. PIERCE, New York, N. Y., assignor to The Linde Air Products Company, a Corporation of Ohio. Filed Sept. 25, 1922. Serial No. 590,552. 8 Claims. (Cl. 220—89.)



1. A safety pressure relieving device having a thin annular marginal portion adapted to be secured to a suitable holder, and a much thicker reinforcing mass united to and disposed centrally within said annular portion, said annular portion comprising a narrow section adapted to be sheared at a predetermined pressure by the cooperation of the periphery of said reinforcing mass with a part of said holder.

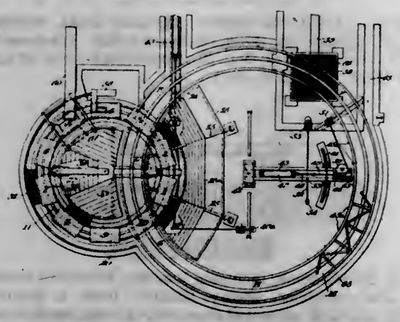
1,579,142. SELF-FITTING CANDLE. RICHARD HUBERT PYBUS, Derby, England. Filed Jan. 20, 1925. Serial No. 3,635. 1 Claim. (Cl. 67—22.)

A candle of circular cross section having formed integrally therewith, at its butt end, a plurality of ribs equally distant apart and longitudinally of the candle, the distance between the ribs being greater than the width of the ribs and providing spaces for the reception of material displaced circumferentially from the ribs in fitting a candle to a socket.



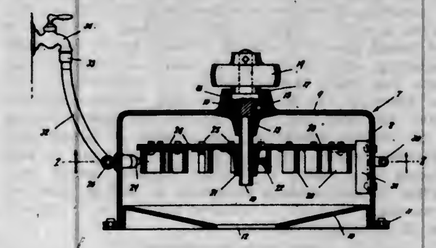
1,579,143. FOLDING COMB. MICHAEL RABB, Newark, N. J., assignor to Hercules Novelty Mfg. Company of New Jersey. Filed Oct. 20, 1925. Serial No. 63,625. 2 Claims. (Cl. 132—15.)

1. A folding comb, including hingedly connected medial and outer sections, means slidable from a position wholly disposed within the confines of the medial section to a position partially bridging the medial and outer sections for retaining the sections in opened-up end-to-end relation, said means consisting of clips of substantially U-shaped cross sectional configuration slidably embracing the upper edge of the comb, and means disposed centrally of the medial section for engaging the inner



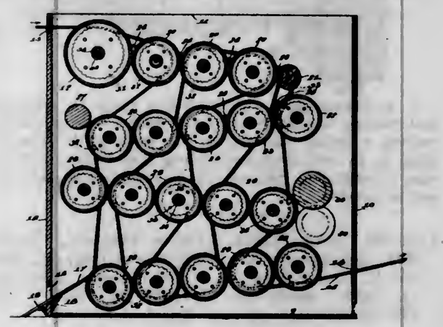
ends of the clips to limit their inward movement, the upper edge of the comb sections being rabbeted whereby the bight of the clips is disposed substantially flush with the major upper edge of the comb, the rabbeted portions of the outer comb sections defining a shoulder engageable with the outer ends of the clips for limiting their outward sliding movement.

1,579,144. PIPE-SUSPENDING DEVICE AND BLOW-OUT PREVENTER FOR OIL-WELL CASINGS. FRANK REDICK, Parkerton, Wyo. Filed Oct. 3, 1925. Serial No. 60,299. 2 Claims. (Cl. 166—14.)



1. The combination of a base member arranged over a well and interfitting superimposed bushings on the base, and well casings designed to be suspended from the bushings, each of said casings having its outer pipe section cut and threaded, an interiorly and exteriorly threaded special collar screwed on the said casing section, an outer casing section removably screwed in the collar whereby the casing to which the collar is connected may be raised or lowered into the well and also whereby the special collar may be threaded into a bushing and the last mentioned casing section thereafter removed from the said outer casing section.

1,579,145. MOLDING AND CASTING PLANT. EARLE C. REED and HOWARD C. REED, Dunkirk, N. Y., assignors to Continental Heater Corporation, Dunkirk, N. Y., a Corporation of New York. Filed Mar. 6, 1925. Serial No. 13,622. 7 Claims. (Cl. 22—21.)



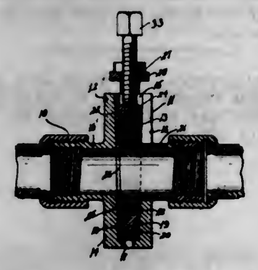
1. In a casting plant of the type in which the various molding and casting steps are performed at different stations, the combination with an endless pattern conveyor operable to move patterns and flasks past the several stations at which the mold sections are completed and the patterns are cleaned, of an endless mold conveyor operable to carry completed molds past pouring and shakeout stations, said mold conveyor branching from said pattern conveyor adjacent the mold-section completing station and returning thereto at a point past the pattern cleaning station.

1,579,146. WATER MOTOR. WALTER E. RICHARDSON, Tucson, Ariz. Filed Feb. 11, 1925. Serial No. 8,448. 3 Claims. (Cl. 253—133.)

1. A water motor comprising a rotor member, concaved buckets, means securing said buckets to said rotor member for the adjustment of said buckets about axes substantially parallel with the axis of the rotor member, and means for directing water into said buckets.

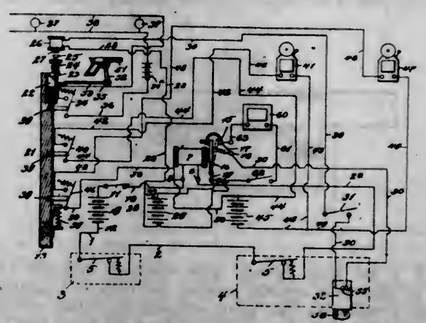
1,579,147. COOKING APPARATUS. LUIS ROMERO, Juarez, Mexico. Filed Oct. 26, 1925. Serial No. 64,866. 5 Claims. (Cl. 107—57.)

4. A cooking apparatus for cakes comprising a plurality of series of heated rolls, each series of rolls being arranged at various vertical heights, and inclined to the horizontal, means for revolving the rolls, the rolls in one series revolving in a direction which is opposite to the direction of rotation of an alternate series, a roller of relatively small diameter located in the spaces between the rolls of the top series and certain of the rolls of the next lower series, and means for guiding the cakes from one series of rolls to the next lower series of rolls.



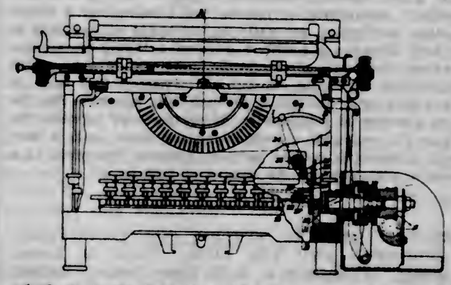
1,579,148. RING. RUBIN ROSENTHAL, Brooklyn, N. Y. Filed June 7, 1924. Serial No. 718,608. 2 Claims. (Cl. 63—29.)

1. A ring comprising a body formed of an enlarged portion having alined inner and outer sockets with a division plate therebetween, said division plate being provided with an elongated aperture, a removable background mounted in the outer socket, a removable ornamental member mounted on top of the background, and a locking member connected with said background for locking the background against removal, said locking member being swingably mounted and proportioned to pass



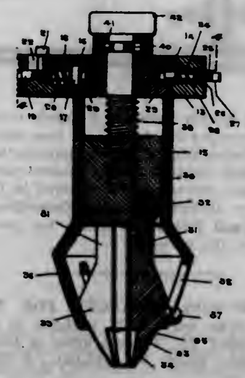
through said aperture when the background is placed in said outer socket, said locking member being capable of turning so as to straddle said aperture for locking the parts in position.

1,579,149. COUPLING. FRANCIS R. RUBELLI, West New Brighton, and OSKAR FRISK, Brooklyn, N. Y. Filed Apr. 11, 1924. Serial No. 705,871. 1 Claim. (Cl. 285—144.)



A pipe coupling comprising a female member having a recess provided therein, an attaching nipple extending from one wall of said member, the opposite wall of said member having a slot therein terminating short of the bottom wall thereof, all of the vertical interior walls of said recess being tapered from top to bottom, a male member including a head, all of the vertical walls of said head being correspondingly tapered for seating engagement with the vertical walls of said recess, an attaching nipple extending from said head and through the slot in said female member, a gasket interposed between one wall of said recess and the adjacent co-acting face of said head, said female member having a drain opening therein communicating with said recess, and an adjustable clamping means carried by said female member and engaging said male member for holding the latter seated with the former.

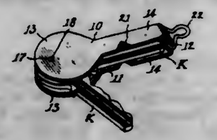
1,579,150. ALARM APPARATUS. OSCAR SANDWEISS, St. Louis, Mo. Filed Apr. 4, 1921. Serial No. 458,324. 2 Claims. (Cl. 177—314.)



1. An electric alarm apparatus comprising, in combination with an apertured enclosing cabinet, a movable closure for the aperture of the cabinet, an electrically actuatable spring-bolt for normally releasably locking the closure in aperture closing position, and a spring for actuating the closure when released by said bolt, a normally closed main circuit including a magnet coil concealed in the cabinet, a second circuit including a second magnet coil and a switch also concealed within the cabinet, said switch being magnetically controlled by the first magnet coil to open the second circuit when the main circuit is closed and adapted to close the second circuit on an opening of the main circuit, an alarm circuit including a second circuit closing-switch disposed within the cabinet, and a projection on the closure adapted, when the closure is in apertured closing position for engagement with the second switch to open the alarm circuit, said second switch being adapted to automatically close the alarm circuit when said projection is out of engagement therewith and the second magnet being adapted on a closing of the second circuit to actuate said bolt to release the closure for actuation by said spring to carry said projection out of circuit opening engagement with the second switch.

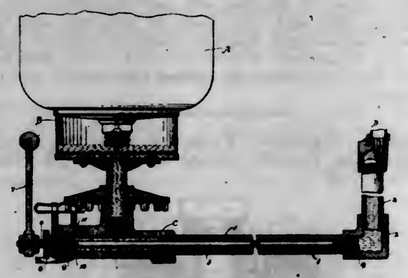
1,579,151. TYPEWRITING MACHINE WITH POWER DRIVE. CARL SCHLÜNS, Berlin-Steglitz, Germany, assignor to Mercedes Büro-Maschinen- und Waffen-Werke, Benshausen, Thuringia, Post Mehlis, Germany. Filed July 28, 1923. Serial No. 654,446. 25 Claims. (Cl. 197—17.)

1. In a typewriter, type levers, a rotating drive shaft, means connected with said type levers for operating the latter, means for bringing said operating means into engagement with said drive shaft for actuating said type levers, independently rotatable abutment cams for limiting the engagement of said operating means with said drive shaft, and means for locking said cams in selective positions.



1,579,152. WRENCH. WILLIAM D. SEAL, Des Arc, Mo. Filed Aug. 21, 1923. Serial No. 658,575. 2 Claims. (Cl. 81—60.)

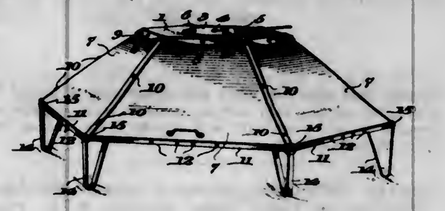
1. A tool comprising an actuating member having a circular opening therein, a head having a cylindrical portion fitted rotatably and removably in said opening co-



axial with said opening, said head having an annular groove and ratchet notches between the sides of the groove, a retaining member movably mounted in said actuating member and adapted to project into said opening and fit snugly in said groove, a pawl independent of said retaining member mounted movably in the actuating member to project into said opening and engage said ratchet notches, and spring means for moving said retaining member and pawl into said opening to engage in said groove and notches respectively, said retaining member and pawl being adapted to be retracted from said opening to permit the head to be withdrawn from the opening.

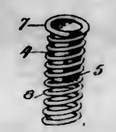
1,579,153. KEY HOLDER. ALFRED A. O. SEELER, South Orange, N. J. Filed Dec. 31, 1924. Serial No. 759,144. 3 Claims. (Cl. 59—98.)

1. A key holder comprising a pair of side plates each having a substantially circular end portion and a shank portion conforming generally to the shape of the keys to be held thereby, a resilient integral bridging connection between the ends of the shank portions of said plates and means extending through the opposite free ends of the plates and insertable through the apertures in the keys whereby to frictionally clamp the keys between the plates for swinging movement of the same from a normally covered or housed position between the plate to a position for exposing the shanks of said keys.



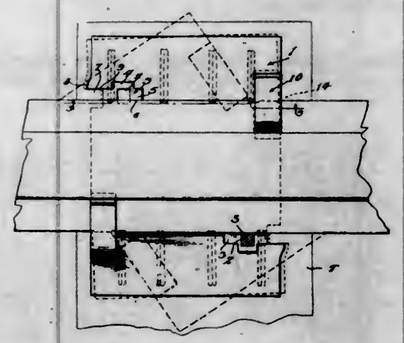
1,579,154. HEATING SYSTEM FOR INCUBATORS, BROODERS, AND THE LIKE. HENRY M. SHEER, Quincy, Ill., assignor to H. M. Sheer Company, Quincy, Ill., a Corporation of Illinois. Filed Sept. 25, 1922. Serial No. 590,461. 2 Claims. (Cl. 158—40.)

1. A heating system including a supply tank, a burner, a base for supporting the tank, said base having a channel extending therethrough, and communicating with the tank, a feed pipe connecting the channel and burner, a plug screwed into one end of the channel in the base and having a screw threaded opening therethrough, and a valve-stem screwed into said opening for controlling the supply of oil to the burner.



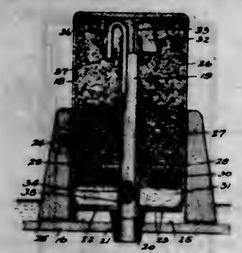
1,579,155. SECTIONAL CANOPY FOR BROODERS. HENRY M. SHEER, Quincy, Ill., assignor to H. M. Sheer Company, Quincy, Ill., a Corporation of Illinois. Filed Nov. 16, 1923. Serial No. 675,161. 5 Claims. (Cl. 119—32.)

5. A canopy having a polygonal top, side sections secured along adjacent edges to one another and to the top forming polygonal outer edge, transverse braces extending diagonally across corners between the adjacent sections and secured thereto, and substantially U-shaped



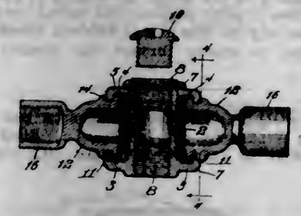
legs having the outer ends thereof secured to the corners of the canopy and having the inner ends secured to the transverse braces.

1,579,156. ELECTRICAL CONTACT FOR TERMINALS OF VACUUM TUBES. JOHN H. SIEMANN, Brooklyn, N. Y. Filed May 2, 1924. Serial No. 710,604. 3 Claims. (Cl. 250—27.)



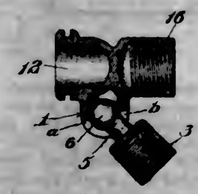
1. A contact device for vacuum tube prongs, which comprises a sleeve adapted to be frictionally disposed over a prong, a coil spring fixed to said sleeve and surrounding the said sleeve, said spring extending below the lower end of the prong to make contact with the terminal of a vacuum tube socket.

1,579,157. TIE PLATE. WILLIAM P. SINGELTARY, Asheville, N. C. Filed Jan. 26, 1925. Serial No. 4,845. 4 Claims. (Cl. 238—298.)



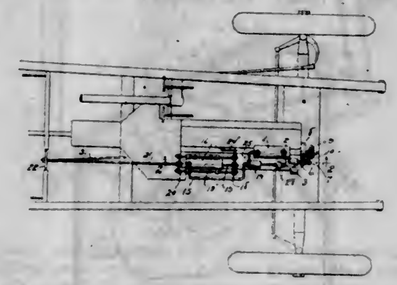
1. A tie plate having spike openings adjacent two of its diagonally opposite corners, and rails base engaging lugs overhanging the plate adjacent the other corners thereof, the plate being provided upon its upper side adjacent each spike opening with a shoulder, the shoulders being designed to engage the opposite side edges of the base of a rail and being spaced apart on lines coincident with the inner sides of the lugs.

1,579,158. WATER FILTER. ROBERT H. SMILIE, Oakland, Calif. Filed Jan. 8, 1923. Serial No. 611,509. 9 Claims. (Cl. 210—108.)



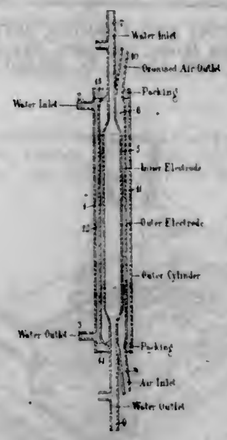
4. In a filter, a siphon, filtering material within the siphon, and means providing a by-pass around air that may accumulate at the top of the siphon.

1,579,159. RAIL FITTING. ALBERT RICHARD SPIKINGS, Lake Placid Club, N. Y. Filed Mar. 4, 1924. Serial No. 696,847. 1 Claim. (Cl. 287—54.)



A rail fitting comprising a shell, a tubular member disposed therethrough and spaced from the face walls of the shell, the tubular member being internally threaded at each end for connecting rails thereto and externally threaded at one end thereof, means for maintaining the shell and tubular member in assembled relation, the face walls of the shell being provided with openings, socket members having recesses engageable within the openings of said face walls, a removable head engageable with the recesses of the socket members, and a nut engaging the external threads of the tubular member for holding the head in applied position.

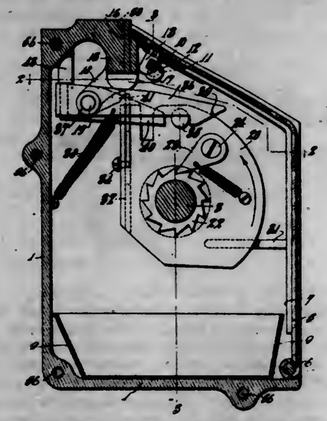
1,579,160. BRACING COUPLING. ALBERT RICHARD SPIKINGS, Lake Placid Club, N. Y. Filed June 17, 1924. Serial No. 720,582. 1 Claim. (Cl. 287—54.)



A rail structure comprising, in combination, a socket member having recesses provided at one end thereof for connection with a railing post, the opposite end portion of the socket member being tubular and internally threaded for engagement with a rail, the central portion of the socket member having formed integral therewith a laterally directed hollow extension, the wall of said extension having a slot, a portion of the slot being enlarged, a cap adapted for connection with a brace member, said cap being provided with an outstanding member terminating in an enlargement, said enlargement being insertable through the enlarged portion of the slot of the extension, and said outstanding member being movable within the slot.

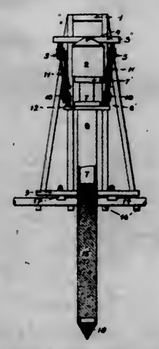
1,579,161. AUTOMOBILE HYDRAULIC GOVERNOR. SIDNEY W. STACY, Uniontown, Pa. Filed Mar. 28, 1925. Serial No. 19,097. 1 Claim. (Cl. 192—3.)

A governor for a motor vehicle comprising a supply tank, a gear pump, a pipe connecting the pump with the tank, a gear loosely mounted on the pump shaft, clutch means for connecting the gear with the shaft, a governor operated by the motor of the vehicle for actuating the clutch means, means for connecting the gear with the movable part of the motor, a casing, means for connecting the same with the outlet of the pump, an adjustable control valve in the connection, a cylinder, a piston therein, means for connecting the piston with the brake mechanism and throttle mechanism of the vehicle, means for connecting the casing with the cylinder, means for connecting the casing with the tank and a check valve for controlling such connection.



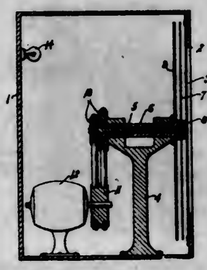
1,579,162. PROCESS FOR PRODUCING OZONE. ALFRED STARKE, Scottdale, Pa., and HANS VON WARTENBERG, Danzig-Langfubr, Free State of Danzig, assignors to the Firm of Ozonbochfrequenz G. m. b. H., Berlin-Wilmersdorf, Germany. Filed Feb. 2, 1923. Serial No. 616,620. 2 Claims. (Cl. 204—32.)

1. In a process for producing ozone in an ozonizer having electrodes, which consists in passing the medium to be ozonized through the ozonizer between the electrodes and subjecting it therein to the action of electric energy in the form of alternating currents, supplying the alter-



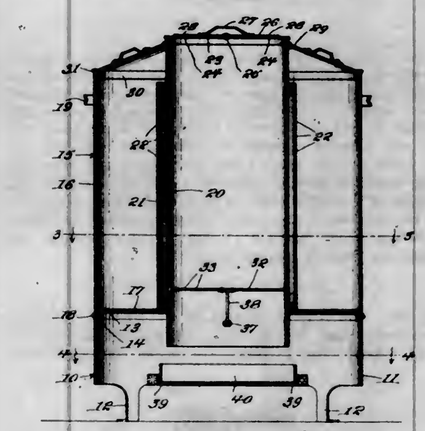
nating currents to the said electrodes in the form of undamped oscillations, the periodicities of which lie in the range from 1,000 to 100,000 periods per second as set forth.

1,579,163. COIN-CONTROLLED APPARATUS. DAVID H. STEWART, Kent, Ohio, assignor to Stewart Machine Co., Kent, Ohio. Filed Jan. 7, 1924. Serial No. 684,863. 8 Claims. (Cl. 194—63.)



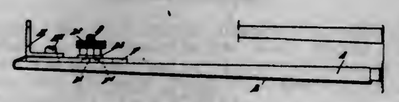
1. In apparatus of the class described, the combination with a movable part of a vending machine, of a member for moving said movable part, a casing for enclosing said member, the said casing having a coin slotway, the said member having a coin slotway adapted to register with that of the said casing, means for holding said member against forward movement, means on said member for holding the coin inserted into the slotway thereof in a manner whereby the same will project therefrom, means releasable by coin engagement for releasing said forward rotation preventing means, and swingably mounted means mounted on said casing and adapted to be swung into the path of the coin slotway whereby the coin slotway thereof may be restricted to receive certain predetermined coins only.

1,579,164. DRIVING AND FORMING CAST-IN-PLACE PILES. JOSEPH HARRY THORNLEY, New York, N. Y. Filed Oct. 12, 1922. Serial No. 593,990. 9 Claims. (Cl. 61—57.)



1. A concrete pile forming apparatus comprising a frame, a hammer, a pivoted cross arm borne by said hammer, pulleys attached to said cross arm, other pulleys adapted to be attached to said frame, cables extending over said pulleys to operate same and a hoist connected to the cables.

1,579,165. COLOR BLENDER. WILLIAM N. TIENCKEN, Savannah, Ga. Filed July 20, 1923. Serial No. 652,839. 1 Claim. (Cl. 46—14.)



A device of the class described comprising a housing having a window therein, a support in the housing, a tubular shaft journaled in the support, a solid shaft passing through the tubular shaft and having its end extending beyond the end of the tubular shaft, a shutter carried by said extended end, a disc connected with the tubular shaft and arranged in rear of the shutter, means for rotating the shafts by one motor, an opening in the shutter extending from a point adjacent the center towards the circumference and the disc having different colors thereon and arranged to appear through the opening in the shutter.

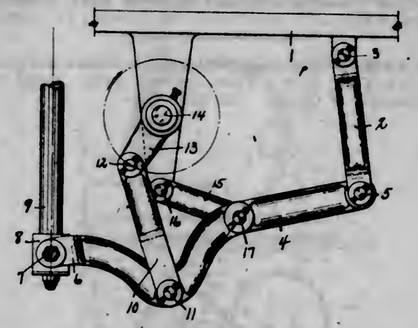
1,579,166. BOILER. ANTHONY TORTORICH and EDWARD FONTAINE WILKINSON, Sr., Lutcher, La. Filed Sept. 3, 1924. Serial No. 735,668. 2 Claims. (Cl. 126—344.)

1. A device of the character described comprising a cylindrical base member open at its bottom and provided at its top with an inwardly extending supporting ring portion, the base member being provided with legs the spaces between which constitute draft openings, an ash pan removably mounted within said base member, a cylindrical boiler registering with and mounted upon the base member, the boiler having a bottom member and a removable cover, said bottom of the boiler resting upon the inwardly directed ring portion at the upper edge of the base member, a cylindrical flue extending axially through the boiler and having its lower end secured to and projecting beyond the bottom thereof and terminating at a point above said ash pan, an annular perforated wall member surrounding said flue in spaced relation thereto, a grate located within the lower portion of the flue, and a removable cover for the flue provided with draft regulating means.

1,579,167. MEANS FOR HOLDING ABRASIVE, POLISHING, OR LIKE MATERIAL. LESLIE TOWL, London, England. Filed Nov. 20, 1922. Serial No. 602,128. 6 Claims. (Cl. 51—187.)

1. A device of the class described, comprising a flexible abrasive or polishing strip, a holder for said strip provided with a tubular end portion, a handle member having a part adapted to fit within the tubular end portion of the holder and serving to clamp one end of the flexible abrasive or polishing strip to the holder within the tubular end portion thereof, and securing means for the other end of the flexible abrasive or polishing strip on the holder.

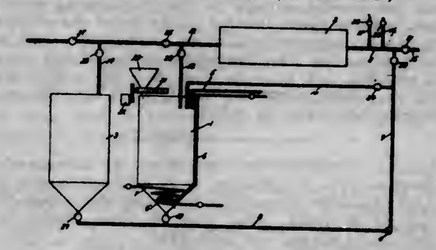
1,579,168. ELECTRIC CONDENSER. CHARLES E. VAWTER, Philadelphia, Pa., assignor to Dubilier Condenser & Radio Corporation, New York, N. Y., a Corporation of Delaware. Filed Apr. 28, 1923. Serial No. 635,210. 2 Claims. (Cl. 250—41.)



1. An electric condenser comprising a plurality of armatures of electrically conductive material, a plurality of sheets of mica interposed between the armatures, a casing clamping said armatures and strips of mica together, and sheets of material more compressible and less brittle than mica interposed between the casing and the opposite surfaces of the assembled armatures and mica sheets, whereby when the casing is compressed, the armatures and mica will be held firmly together without impairment of the mica.

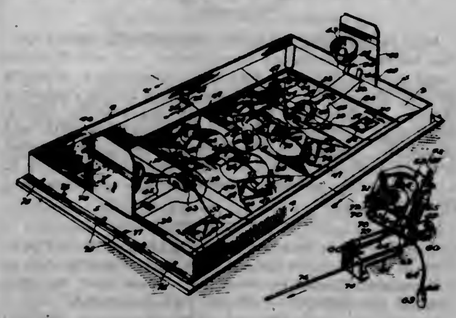
1,579,169. MANUFACTURE OF DIPPED RUBBER GOODS. GIUSEPPE VENOSTA, Milan, Italy. Filed Mar. 12, 1924. Serial No. 698,804. 8 Claims. (Cl. 18—58.)

8. A process for producing seamless rubber goods consisting in dipping a suitable former in the latex of a caoutchouc-bearing plant to which sulphur and a metallic oxide have been added, evaporating its water-content introducing into the film thus obtained an accelerator by absorption from the external surface, and vulcanising by heating at a suitable temperature.



1,579,170. PLUNGER-OPERATING MECHANISM. GUY C. WILKINSON and MEAD HEDGLON, Syracuse, N. Y., assignors to Syracuse Washing Machine Corporation, Syracuse, N. Y., a Corporation of New York. Filed Oct. 25, 1921. Serial No. 510,331. 2 Claims. (Cl. 74—14.)

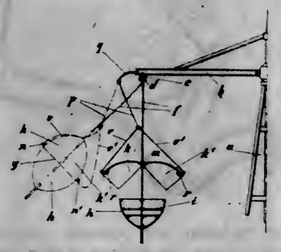
1. A plunger operating mechanism comprising in combination with a vertically movable plunger, a walking beam fulcrumed at one end to permit longitudinal movement of the beam and having its other end operatively connected to the plunger, a rotary driving element movable about a fixed axis above the intermediate portion of the walking beam, a pitman having one end eccentrically pivoted to the driving element and its other end pivotally connected to the intermediate portion of the walking beam for rocking said beam upon its fulcrum and thereby reciprocating the plunger, and a radius rod having one end pivoted to swing about a fixed axis in the vertical plane of and below the axis of the driving



element and its other end pivotally connected to the walking beam between the fulcrum of said beam and the pivotal connection of the pitman with the beam.

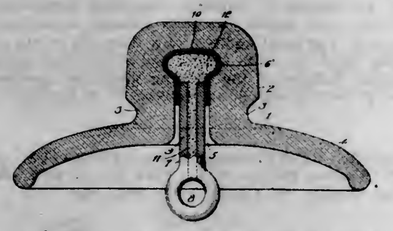
1,579,171. PROCESS OF FILTRATION AND TREATMENT OF LIQUIDS. CHARLES V. ZOUL, Santa Monica, Calif., assignor to The Celite Company, Los Angeles, Calif., a Corporation of Delaware. Filed Feb. 18, 1923. Serial No. 618,803. 14 Claims. (Cl. 210—208.)

1. The process of filtration comprising repeatedly circulating clean liquid through a filtering apparatus, followed by a gradual addition of a filter aid to the circulating liquid; so as to form a bed of filter aid upon the filtering surfaces of the filtering apparatus previous to passage therethrough of the solution to be treated.



1,579,172. BASKET-BALL GAME APPARATUS. JOHN W. WEAVER, Raleigh, N. C. Filed Aug. 8, 1925. Serial No. 49,040. 19 Claims. (Cl. 273—85.)

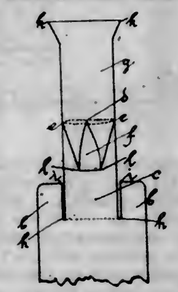
1. In a game apparatus, a game board having an opening and formed with the upper surface thereof sloping toward said opening, a rest block associated



with said opening and having a run-way for the reception of a ball entering said opening, and means carried by said rest block adapted to be actuated to project said ball from said run-way into the space above the game board.

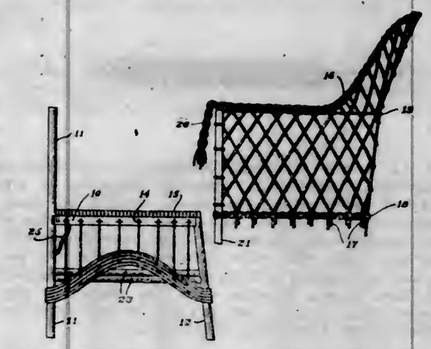
1,579,173. FLYING ROUNDABOUT. AUGUST ALTMANN, New York, N. Y. Filed Nov. 15, 1924. Serial No. 750,047. 2 Claims. (Cl. 272—41.)

1. A flying roundabout comprising in combination, a centrally rotating shaft, radial sweeps fixed on said centrally rotating shaft, a rectangular articulated frame at the front end of each sweep, a vehicle mounted in said rectangular frame, a hood on said vehicle said hood being composed of two halves hingedly connected the one with the other, a curved outrigger hingedly fixed on the front end of each sweep, a rod attached to the front end of said outrigger so that it can swing on the same, and two ropes attached to the lower end of said rod and to the outer end of the corresponding half of said hood so that when the vehicle is at rest said ropes are stretched and raise the hood from the vehicle but when the vehicle is swung out, said ropes are slack and lower the hood onto the vehicle.



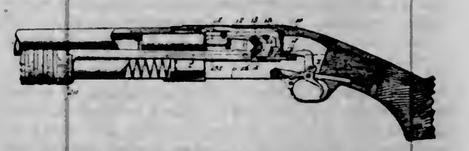
1,579,174. INSULATOR. MINOR F. H. GOUVERNEUR, Rochester, N. Y., assignor, by mesne assignments, to Locke Insulator Corporation, Baltimore, Md., a Corporation of Maryland. Filed July 29, 1919. Serial No. 313,976. 1 Claim. (Cl. 173—318.)

An eye bolt for insulators comprising a shank portion having a tubulature therethrough, one end of which shank is provided with means for engaging a co-acting member, the opposite end of said shank having connected thereto, in fluid-tight relation, an imperforate, hollow, thin-walled, soft-metal thimble communicating with said tubulature, whereby said bolt is adapted for connection with an associated portion by inserting said thimble in a corresponding aperture in said portion and expanding the same in place.



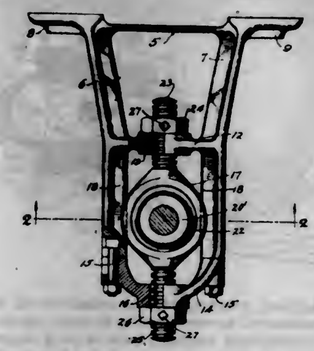
1,579,175. PROCESS OF MANUFACTURING STOCKINGS UPON THE FLAT HOSIERY FRAME. CURT HILSCHER, Chemnitz, Germany. Filed Mar. 1, 1923. Serial No. 622,125. 1 Claim. (Cl. 66—186.)

Process of manufacturing a stocking upon the flat hosiery frame consisting in working, after the production of the legs, heel parts, and foot upper, of several setting-on rows in the breadth of the French toe, in producing the French toe in continuation of said setting-on rows, in removing the stocking from the frame needles, in setting-on upon the frame needles the parts



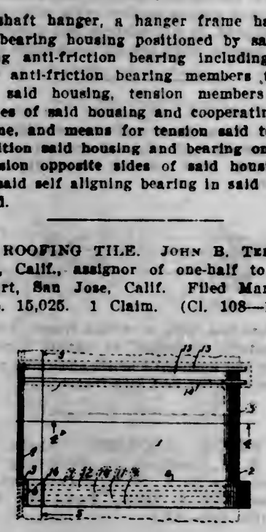
of the toe which project laterally over the foot upper and in using the set-on parts as beginning for the sole part which has to be worked in the same breadth as these parts.

1,579,176. SECTIONAL CHAIR. JOHN JASNOSZ, Philadelphia, Pa. Filed May 11, 1923. Serial No. 638,304. 1 Claim. (Cl. 155—196.)



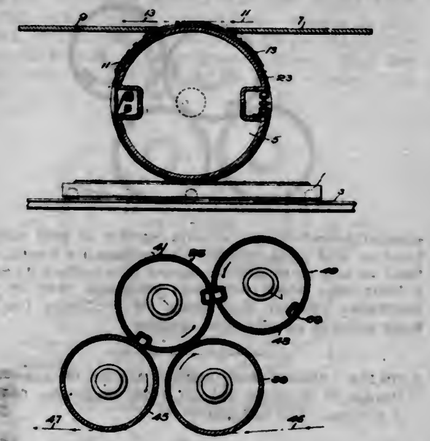
As a new article of manufacture, a sectional chair including a base portion comprising a frame, front and rear legs upon opposite sides of the frame, a seat portion upon said frame, woven wicker on said frame embracing the legs and said front legs extending a predetermined distance above the seat, a top portion comprising arms and back portion of woven material normally disconnected from the base portion, said arm rests having loop portions thereon for engagement with the upwardly projecting ends of said front legs and means whereby to connect the top portion to the base frame.

1,579,177. FIREARM. CRAWFORD C. LOOMIS, Ilion, N. Y., assignor to Remington Arms Company, Inc., a Corporation of Delaware. Filed Sept. 11, 1924. Serial No. 737,023. 7 Claims. (Cl. 42—17.)



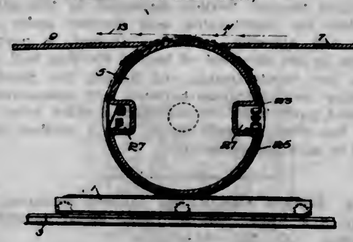
2. In a firearm comprising a reciprocating breech block, an action bar for operating said breech block and a firing mechanism, means controlled in part by said firing mechanism for locking said action bar when the firing mechanism is in firing position, and means associated with said action and said locking mechanism for preventing the release of said action bar for retraction until the action bar has first moved forward relative to the locking mechanism.

1,579,178. SHAFT HANGER. HARRY R. REYNOLDS, New Britain, Conn., assignor to The Fafnir Bearing Company, New Britain, Conn., a Corporation of Connecticut. Filed May 19, 1925. Serial No. 31,260. 2 Claims. (Cl. 308—33.)



1. In a shaft hanger, a hanger frame having guides thereon, a bearing housing positioned by said guides, a self aligning anti-friction bearing including inner and outer races anti-friction bearing members therebetween carried by said housing, tension members secured to opposite sides of said housing and cooperating with said hanger frame, and means for tension said tension members to position said housing and bearing on said frame and to tension opposite sides of said housing whereby binding of said self aligning bearing in said housing will be prevented.

1,579,179. ROOFING TILE. JOHN B. TEIXEIRA, near San Jose, Calif., assignor of one-half to Antone M. Bettencourt, San Jose, Calif. Filed Mar. 12, 1925. Serial No. 15,025. 1 Claim. (Cl. 108—10.)

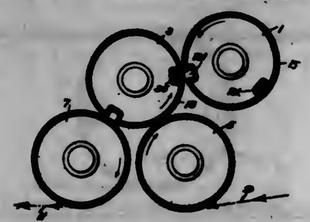


A roofing tile comprising a plate having an upstanding flange extending its full width at one end and a downwardly curving lip at the other end, said lip having a notch formed therein and said flange having one end offset a distance to receive one end of the upstanding flange on an adjoining tile, and said plate having a pair of upstanding spaced and parallel ribs of uniform height formed along one side edge to form a groove the other side edge carrying an upstanding flange and a laterally extending overhanging part carried by said flange, said overhanging part having a pair of spaced parallel ribs of uniform height depending therefrom to form, in conjunction with said last mentioned flange, a pair of parallel grooves and a groove formed transversely in its upper surface adjacent to said first mentioned upstanding flange.

1,579,180. PRESS. LESTER THAYER, Winthrop, Mass., assignor to Forbes Lithograph Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed June 1, 1922. Serial No. 565,215. Renewed Jan. 6, 1926. 14 Claims. (Cl. 101—141.)

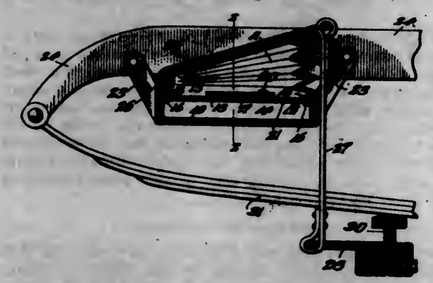
1. In a lithographing press, the combination with a rotary impression member for the sheet operated upon and a plate carrying member, of a knife for splitting the sheet transversely to the axis of said impression member simultaneously with the applying of print thereto, said knife being carried by one of said members for acting on the sheet intermediate the boundaries of the region thereof printed, and a platen for the knife adjustable toward or away from the cutting edge of said knife carried by the other of said members.

1,579,181. METHOD OF AND AND APPARATUS FOR LITHOGRAPHING. LESTER THAYER, Winthrop, Mass., assignor to Forbes Lithograph Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed July 18, 1923, Serial No. 652,335. Renewed Jan. 16, 1926. 13 Claims. (Cl. 101—146.)



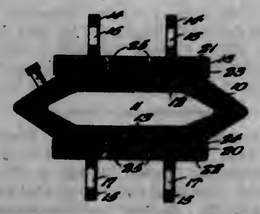
5. In a flat bed press, a rotary impression cylinder, a straight knife arranged lengthwise of said bed and set up among the plates on said bed, and a radially adjustable band encircling said impression cylinder intermediate its length and serving as a platen for said knife.

1,579,182. LITHOGRAPHING PRESS. LESTER THAYER, Winthrop, Mass., assignor to Forbes Lithograph Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Original application filed June 1, 1922, Serial No. 565,215. Divided and this application filed July 18, 1923, Serial No. 652,336. Renewed Jan. 16, 1926. 13 Claims. (Cl. 101—141.)



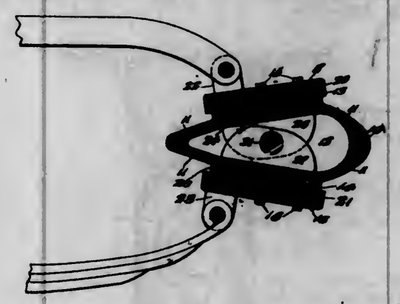
1. A rotary lithographing press having in combination an impression cylinder, a plate cylinder, a band on said

impression cylinder transversely disposed thereto intermediate its length, shims for adjusting said band radially of said impression cylinder, means for tensioning said band, packing on said impression cylinder at each side of said band, the outer surface of said packing being sub-



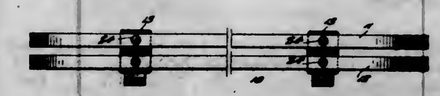
stantially flush with the outer surface of said band, a band on said plate cylinder intermediate its length, said band on said plate cylinder having intermediate its width a knife edge which cooperates with said band on said impression cylinder, and means for tensioning the said band which is on said plate cylinder.

1,579,183. SHOCK ABSORBER. ALFRED WEILAND, East Orange, N. J. Filed Jan. 10, 1924. Serial No. 685,365. 9 Claims. (Cl. 267—31.)



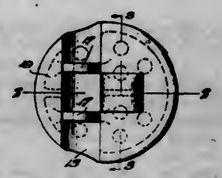
1. A shock absorber comprising an expansible, flexible walled hollow member, means for rigidly securing said member to the frame of a vehicle, means including a rigid hinged member flexibly connected to the axle of the vehicle for maintaining said member under compression and allowing expansion thereof, a partition transverse to the direction of impact dividing said member into two compartments and having two ports for establishing communication between said compartments, one of said ports being uncontrolled, a check valve controlling the other of said ports, and a medium under pressure in said compartments.

1,579,184. SHOCK ABSORBER. ALFRED WEILAND, East Orange, N. J. Filed Feb. 26, 1924. Serial No. 695,204. 6 Claims. (Cl. 267—31.)



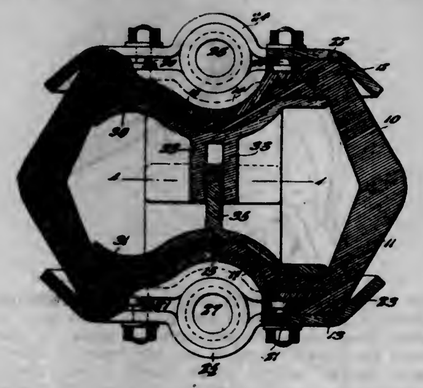
1. In a shock absorber, the combination of a pneumatic member of substantially elliptical form in cross section and having bosses molded respectively in two opposite sides, a base member fixed to one of said bosses, means for attaching said member to a cooperating part, a plate fixed to the opposite boss and arranged to be secured to another cooperating part, and means for varying the effective area of pressure between said plate and said pneumatic member.

1,579,185. SHOCK ABSORBER. ALFRED WEILAND, East Orange, N. J. Filed Nov. 1, 1924. Serial No. 747,218. 7 Claims. (Cl. 267—32.)



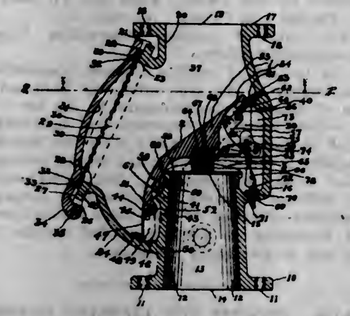
1. In a shock absorber, the combination of a hollow member containing a compressible medium, means for respectively connecting opposite ends of said member to a fixed part of a vehicle and to a spring actuated part of said vehicle, and means molded with said member for resisting movement, in a predetermined direction, of one part of said member with respect to another part.

1,579,186. VEHICLE BUMPER. ALFRED WEILAND, Neshanic, N. J., assignor to Pneumatic Appliances Corporation, New York, N. Y., a Corporation of Delaware. Filed July 10, 1925. Serial No. 42,705. 9 Claims. (Cl. 293—55.)



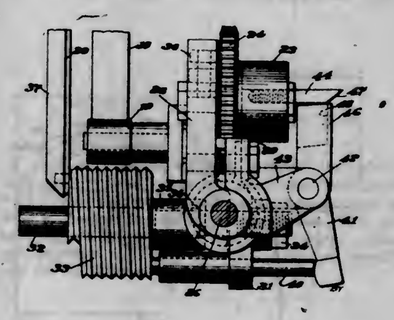
1. In combination with a vehicle frame, a bumper bar of spring material arranged to extend across an end of the vehicle, and pneumatic shock absorbing means interposed between said bar and said frame.

1,579,187. SHOCK ABSORBER. ALFRED WEILAND, Neshanic, N. J., assignor to Pneumatic Appliances Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 6, 1925. Serial No. 48,555. 12 Claims. (Cl. 267—35.)



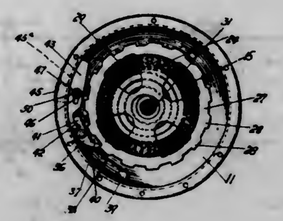
1. In a shock absorber, the combination of a resilient member having a groove in its top to seat the end of a vehicle spring, means for securing said end in said groove, and means for anchoring the bottom of said member to a part of the vehicle.

1,579,188. SHOCK ABSORBER. ALFRED WEILAND, Neshanic, N. J., assignor to Pneumatic Appliances Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 6, 1925. Serial No. 48,556. 7 Claims. (Cl. 267—35.)



1. A shock absorber comprising an expansible hollow member, a pair of metal plates in said member forming respectively top and bottom hinges therefor, interfitting means between said plates providing for relative movement of said plates towards and away from each other and preventing other relative movement, and means for respectively connecting said member at opposite ends to the frame and the spring of a vehicle.

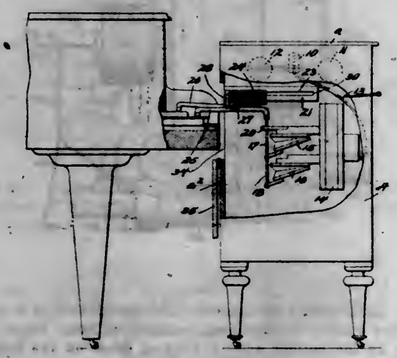
1,579,189. DRY-PIPE VALVE. JOHN W. YATES, New York, N. Y. Filed Sept. 21, 1922. Serial No. 589,615. 11 Claims. (Cl. 169—22.)



1. A dry pipe valve, comprising a housing forming an air pressure chamber and a second housing forming a water pressure chamber; an air valve for the air chamber and a water valve for the water chamber, the valves being connected to form a single valve structure, there being a fulcrum means on the exterior of the housing of the water pressure chamber, engaging the lower end portion of the valve structure when in closed position, and parallel links on the exterior wall of the water pressure chamber pivotally connected to the other end of the valve structure, the said fulcrum means cooperating with the links for maintaining the valve structure in closing position, when the pressure in the air chamber exceeds that in the water chamber; the co-operation of the links and the fulcrum being broken upon excess of pressure in the water chamber over the pressure in the air chamber and causing the valve structure to be moved to open position, the valve structure being guided by the links.

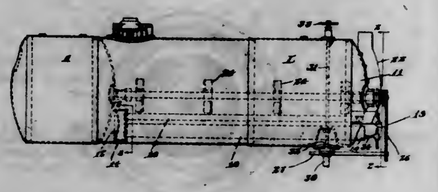
1,579,190. BUILDER MECHANISM FOR YARN SPINNING AND WINDING MACHINES. HORACE H. BURDETT, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Dec. 17, 1925. Serial No. 76,109. 11 Claims. (Cl. 242—43.7.)

1. In a builder mechanism, the combination of a main builder cam, a builder arm, a bunch building worm carried by the builder arm, a winding drum on the builder arm, a rotatable bunch building device for engaging the worm and restraining it from movement out of bunch building position until said device is rotated, and means actuated through the winding drum on winding back the builder mechanism for moving the worm relatively to the builder arm into bunch building position.



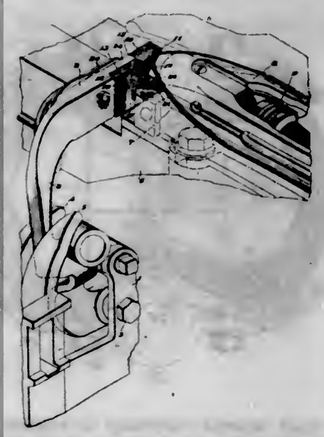
1,579,191. AUTOMATIC FISHING REEL. FRANCIS M. CASE, Cleveland, Ohio, assignor to The Enterprise Manufacturing Company, Akron, Ohio, a Corporation of Ohio. Filed June 23, 1924. Serial No. 721,624. 1 Claim. (Cl. 242—84.3.)

In an automatic fishing reel, a front plate having a flange, a spring located within the flange, a drum upon which the spring is mounted, a cap plate for winding the spring, a ratchet on the outer surface of the drum, a wall formed in the front plate and surrounding the ratchet, a pawl and a latch to operate said pawl lying within the space between the ratchet and the wall, the pawl being pivoted and having one end engaging the ratchet and the other end formed with a cam surface, the latch being curbed along its outer edge to fit the wall, and having a cam surface adapted to cooperate



with the cam surface on the pawl, the latch being mounted to move in an arc to actuate the pawl, and an integral projection upon the latch and passing through a slot in the wall by means of which projection the latch may be operated.

1,579,192. CABINET PLAYER. TOLBERT F. CHEEK, New York, N. Y., assignor to Welte-Mignon Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 20, 1923. Serial No. 663,830. 9 Claims. (Cl. 84—111.)



1. A cabinet piano player comprising a casing and a series of key-operating-levers slidably mounted to move bodily inward or outward with relation to the casing.

1,579,193. DISTRIBUTING TANK FOR OIL. FRED W. CHIPMAN, Framingham, Mass., assignor to International Engineering Works, Inc., Framingham, Mass., a Corporation of Massachusetts. Filed May 29, 1924. Serial No. 716,778. 7 Claims. (Cl. 126—343.5.)

1. Apparatus for thinning viscous liquid, comprising a tank for containing the liquid, combined with one or more oil combustion tubes open to atmosphere and extending horizontally within and along the bottom of the tank from an end thereof a combustion chamber within the tank, into which the combustion tubes deliver; and one or more flues extending back from the combustion chamber to the same said end of the tank, for discharging there the products of combustion; the said tubes being fast to the tank only at its said end, and the said chamber being supported on the bottom of the tank, movable to and fro thereon with the expansion and contraction of the tubes, and fast only to said tubes.

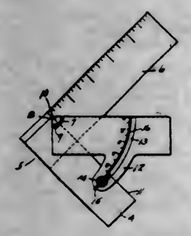
1,579,194. SHUTTLE FEELER FOR LOOMS. HARRY A. DAVIS, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Oct. 12, 1925. Serial No. 61,970. 8 Claims. (Cl. 139—231.)

1. A shuttle feeler having a tip of non-metallic material formed with jaws to embrace the body portion of an improperly boxed shuttle, and a metal cover protection plate secured to the shuttle feeler and overlying the side of the non-metallic tip next to the adjacent shuttle box to be engaged by the shuttle should it rebound.

1,579,195. FLUXED RESINOUS COMPOSITION AND PROCESS OF MAKING SAME. CARLETON ELLIS, Montclair, N. J., assignor to Ellis-Foster Company, a Corporation of New Jersey. Filed Dec. 17, 1924. Serial No. 756,559. 33 Claims. (Cl. 260—4.)

8. An overcured molding composition fluxed with hexamethylenetetramine.

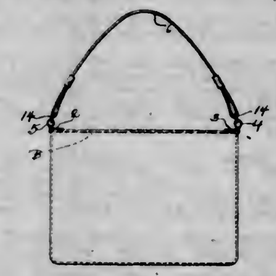
33. In the art of molding resinous compositions containing resins of the type ordinarily hardened by the action of hexamethylenetetramine in the hot press the step which comprises incorporating hexamethylenetetramine in compositions which otherwise would harden too rapidly in the mold, for giving molded articles having a good finish, the amount of hexamethylenetetramine being sufficient to cause the subsequent setting during the molding operation to take place without excessively rapid hardening, to produce molded articles of good finish and to give sharp impressions.



1,579,196. PROCESS FOR RIPENING CHEESE. EDWARD WILLIAM COON, Philadelphia, Pa. Filed Feb. 27, 1926. Serial No. 91,262. 2 Claims. (Cl. 99—11.)

2. A process for ripening cheese having an original moisture percentage of 36% to 40% and subjecting it to a temperature of 55° F., to 70° F., in combination with a humidity percentage of from 75% to 90%.

1,579,197. PROTRACTOR ATTACHMENT FOR SQUARES. JAMES WESLEY DUNHAM, Burnaby, British Columbia, Canada. Filed Apr. 29, 1925. Serial No. 26,780. 1 Claim. (Cl. 33—93.)



In combination with a try square, a protractor attachment therefor, comprising a rectangular plate having a flange turned perpendicularly along one edge, the said flange being longitudinally slotted at one end for engaging the blade of the square, while the flange itself

is adapted to engage that edge of the stock of the square from which the blade of the square extends; the said plate having a relatively short, arcuate slot cut in the said plate adjacent the slotted end of the said flange and concentric therewith; the said plate having an outwardly and backwardly directed arcuate finger pierced with a

relatively long arcuate slot formed concentrically with the said short arcuate slot, and having a calibrated scale cut along one edge thereof; a set screw passed through the short slot and anchored in the stock of the square; and a thumb screw locking element passed through the long slot and anchored in the said stock.

1,579,198. HAND-BAG CONSTRUCTION. ROBERT E. SOMMERS, New York, N. Y., assignor to Himmel & Isaacs, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 30, 1925. Serial No. 59,745. 2 Claims. (Cl. 150—33.)

1. A hand bag having a cover member connected to the body thereof, and a bar having a main bar portion located at the underside of said cover member and having ends projecting beyond the ends of said cover member, said projecting ends being formed into outer upstanding eye portions and outer terminal portions extending between the ends of said cover member.

Signaling over power lines, Inductive arrangement for. C. Schwarz. 1,578,552; Mar. 30.
Silk, Treating. H. B. Smith. 1,578,933; Mar. 30.
Skate, Roller. L. V. Davis. 1,578,811; Mar. 30.
Slack adjuster. W. H. Sauvage. 1,578,762; Mar. 30.
Socket wrenches, Attachment for. C. W. Brouse. 1,579,072; Mar. 30.
Soot-blowing provision. J. E. Bell. 1,578,385; Mar. 30.
Sound amplifier. G. W. Bulley. 1,578,391; Mar. 30.
Sound, Device for determining the direction of. W. Kunze. 1,578,325; Mar. 30.
Sound-producing device. E. Frantz. 1,578,595; Mar. 30.
Sound reproduction. E. B. Craft. 1,578,645; Mar. 30.
Sound-transmitting instrument. A. Marr. 1,578,336; Mar. 30.
Spark plug. J. W. Barnes, and T. C. Reynolds. 1,579,060; Mar. 30.
Speed-changing mechanism. J. G. Utz. 1,578,486; Mar. 30.
Speed-control system. L. Fleischmann. 1,578,971–2; Mar. 30.
Speed-regulating device. F. Banneitz. 1,578,794; Mar. 30.
Speed transmission, Variable-. D. S. de Lavaud. 1,578,268; Mar. 30.
Spinning frames, Bunch-building mechanism for. J. Northrop. 1,578,911; Mar. 30.
Spool. G. H. Bird. 1,578,257; Mar. 30.
Spool or bobbin. E. J. Thomson. 1,578,870; Mar. 30.
Spray booth. H. G. Bartling. 1,578,950; Mar. 30.
Spraying device for plastic material. R. M. Wilkinson. 1,578,944; Mar. 30.
Spraying machine. E. M. Horton. 1,578,732; Mar. 30.
Spring: *See*—
Take-up spring. Vehicle spring.
Spring cover. J. C. Anderegg. 1,579,053; Mar. 30.
Spring cover, Combination. C. A. Lincoln. 1,578,535; Mar. 30.
Spring cover, Sectional. J. N. Scully and C. A. Lincoln. 1,578,553; Mar. 30.
Spring cover, Vehicle. A. R. Goldrick. 1,578,425; Mar. 30.
Spring covers, Closure member for. C. A. Lincoln. 1,578,533; Mar. 30.
Spring rod for underreamers. F. Swan. 1,578,482; Mar. 30.
Spring shackle. J. F. O'Connor. 1,578,352; Mar. 30.
Spring sinker handle for drifters. C. C. Hansen. 1,578,484; Mar. 30.
Spring-suspension arrangement. L. Geyer. 1,578,278; Mar. 30.
Sprinkler-head-controlling mechanism. M. F. Silva. 1,578,770; Mar. 30.
Squares, Protractor attachment for. J. W. Dunham. 1,579,197; Mar. 30.
Stair tread. H. A. Welcome. 1,578,491; Mar. 30.
Stand: *See*—

Washing machine. C. E. Reddig. 1,578,683; Mar. 30.
Washing-machine-operating machine. W. H. Voss. 1,578,564; Mar. 30.
Washing machines, Coin-controlled metering device for. F. J. Goggins. 1,578,655; Mar. 30.
Watch. M. H. Levy and H. Wander. 1,578,607; Mar. 30.
Watch-protecting case. R. Remmler. 1,578,759; Mar. 30.
Water, Device for looking under. J. Daoust. 1,578,958; Mar. 30.
Water-gas apparatus. H. Wood. 1,578,306; Mar. 30.
Water motor. W. E. Richardson. 1,579,146; Mar. 30.
Waterproofing construction. H. C. Innes. 1,578,663; Mar. 30.
Water-tube connection. G. G. Tuttle. 1,579,041; Mar. 30.
Waxer and polisher, Floor. J. T. Garton. 1,578,421; Mar. 30.
Weather strip. C. F. Hoffbauer. 1,578,992; Mar. 30.
Weather strip, Automatic. J. F. Lessing. 1,578,328; Mar. 30.
Welding and cutting apparatus. R. C. Pierce. 1,578,917; Mar. 30.
Welding, Removing the burr formed in. P. M. Hall and W. Remington. 1,578,658; Mar. 30.
Well casings, Pipe-suspending device and blow-out preventer for oil-. F. Redick. 1,579,144; Mar. 30.
Well drill, Rotary. J. A. Zublin. 1,578,623; Mar. 30.
Wheel: *See*—
Friction wheel.
Wheel disk. G. H. Forsyth. 1,578,975; Mar. 30.
Wheel flanges of rail vehicles, Lubricator for the. A. Heuser. 1,579,110; Mar. 30.
Wind instruments and the like, Mute for. G. Schluesselburg. 1,578,763; Mar. 30.
Windshield-cleaning apparatus. C. F. Laganke. 1,578,531; Mar. 30.
Window and door casements, Weather stripping for. G. E. Scott. 1,578,707; Mar. 30.
Window-control mechanism. S. W. Nicholson. 1,578,348; Mar. 30.
Window construction, Roof-. D. J. Nelson. 1,579,132; Mar. 30.
Window-regulator spring assembly. E. E. Heintz. 1,578,990; Mar. 30.
Window screen. C. F. Geshickter. 1,578,277; Mar. 30.
Wire clamp. P. B. Krout. 1,579,005–6; Mar. 30.
Wire connection for electric plugs. O. Abbadini. 1,579,050; Mar. 30.
Wire-terminal connecter. J. Lake, jr. 1,579,008; Mar. 30.
Wireless apparatus, Relay arrangement for changing the tuning of. C. Schwarz. 1,578,551; Mar. 30.
Wood and the like, Process and apparatus for disintegration of. W. H. Mason. 1,578,609; Mar. 30.
Wrench: *See*—
Cylinder wrench.
Wrench. W. D. Seal. 1,579,152; Mar. 30.
Wringer mechanism, Removable. H. J. Criner. 1,578,401; Mar. 30.
Yarn guide. A. E. Byrd. 1,578,710; Mar. 30.
Yarn spinning and winding machines, Builder mechanism for. H. H. Burdett. 1,579,190; Mar. 30.
